THANK YOU! That is the best way to handle it, if you think it is too high, DON'T BUY IT. But leave them alone so that they can at least try to run a business. They will either sell it, or go down in flames trying. Like you, I am getting sick and tired of everyone's complaining.

I do not understand people who just say "scrap this, junk that" and so
on. Just because they use another mailer or browser or what ever.
If they used different packages and then decide to scrap one,
I can understand that, but else...?

Anyway, I use Netscape Gold to surf the Internet,
Eudora Pro to Email, and Agent to access Newsgroups.
I prefer to use the packages what they were intended for
in the first place. I never use the Email facility of Netscape
(or IE 3.0) or the News capability. I don't use the mail
capabality of Agent also.

I just use the 3 seperate packages, and never had any
problems with them. Only W95 sometimes hicks up,
but then again, is there any other OS which can replace
that?

Too bad there arenï¿½t any browsers and such for the XL/XE.
Bo.

>recently, and it makes a real difference.

I wrote a Menu program with it.
My brother a Morse program.
I really like the Zynapse Monitor.
And it had some really nice error messages, like:

System confuses error

There was a bug in my program, and when it
produced this error message I really laughed.
Never thought that a bug could make me laugh!

Bo.

I wouldn't use a high-end system for this, but I find that it's a *perfect* dedicated use for my old 386sx. I've had APE v1.11 up and running full-time on it for close to 2 weeks now, and it's been rock solid - no mean feat considering the advanced age and generally decrepit condition of my circa-1989 Epson Equity 386sx (nice job, Steve Tucker - my registration is winging its way towards you!). I've even got an old Ethernet card in it so I can use devices on my LAN as well.

APE/SIO2PC have taken the hassle out of using my Atari 800, and I don't have to worry about my musty old 5 1/4 disks disintegrating, either. I think it's an attractive, elegant and very viable option for anybody who still enjoys their Atari 8-bit, and I can't recommend this option enough!

>I never understood why 2 RS232 ports couldn't use the same IRQ.

They can and do. The standard IRQs are IRQ 3 for Com2 and Com4, and IRQ 4 for Com1 and Com3......on many systems, you can change it. The problem is if you try to use 2 devices hooked up to 2 comm ports that use the same IRQ _at the same time_ is when you get system lockups and stuff. For example, if you have your mouse on Com1 and your APE cable on Com3 and you have them set to use the same IRQ, you can't expect your mouse and APE to work at the same time, because the system has no way of knowing which of the two comm ports the data is coming from. So that means you can have a modem hooked to one comm port sharing an IRQ with say your Atari (via APE), but you can't use the two devices at the same time (i.e. using your PC's modem with the ATari via Ape).
They could solve this problem by assigning each comm port a different IRQ, but there's a total limit of 16 IRQs that can be used, no matter how fancy your PC, and several are already reserved for system use. Which is why you can have a nice fancy Pentium with APE, three serial devices, two printers, a sound card, etc., but you can't use anywhere near all of the devices at the same time since all of those devices communicate with teh computer via IRQs.......

>The BIOS doesn't even use IRQs so it's clear that the BIOS (or whatever)
>can detect whether there's data at a port.So when a IRQ sounds,why doesn't
>the RS232 handler just look at both ports?

The reason IRQs are implemented in the first place is to multiplex different hardware devices. It's far too expensive and impractical to make independent communication lines on the motherboard for all existing comm ports and all future potential hardware addons, so they were forced to compromise.

>: When using w95 all your serial in/out requests are trapped in ring 0 and
>: have to go through a number of VxD's to reach the hardware. If any
>: of these VxD's decide to ignore stuff from your new com port in
>: favor of the mouse driver, it will act dead.
>
>And people wonder why I don't "upgrade" to Windows.

It has nothing to do with what operating system you use, you can use DOS or NT or OS/2 or Linux and you'd still have the same problem if you use two devices sharing the same IRQ at the same time, because it's a hardware conflict, not a software one.
Maybe you should upgrade to a Mac instead (sorry, couldn't resist).........

No. You people live in an alternate dimension where every Circle-K has a
Major Havoc. I don't. In fact I didn't know that there were teapots in
it until just now.

And rumor has it that the reason there is no PC port of it is that "unless
it's on a vector screen, it sucks pigs." One of THOSE. Just like
Quantum, which of course falls under the same category but at least I have
a faint idea what it's LIKE.

It seems like whenever I ask for even a description of the game, I can't
find it. Web searches, what have you.... either that or I've looked for
it and found it severtal times and forgotten it each time.

Sounds like an interesting project...

It could be called AtariLynx because, heck, the atari cannot display
640*480*256 color gifs or anything.

In comp.lang.basic.misc, I found a link to an HTML decoder written
entirely in basic. I'm sure someone could hack that around...

This isn't quite true. The original 256K RAM upgrade for the
800XL which Claus Buchholz had published in Byte magazine switched RAM in
32K banks. The RAMbo and Newell boards switched in 16K banks like the
130XE.

Hi. About 6 months ago, my Atari 800xl stopped working. We recently brought it out of the closet and tried to repair it. When I did a voltage test, most of the capacitors registered 4.2 volts. However, one capacitor only registered 3 volts.

Could this be the problem? Has anyone tested the capacitor voltage? If so, what voltage are they all supposed to be?
Do you think I should buy a new capacitor and connect it in place of the old one?

Please help...

Nah, I have a network in my house one machine can happily Net and the
other can happily APE
you can get CHEAP 486 now and throw a SMALL HD in it (120 should hold
the whole archive) to use as a file server for the 8 bit

Source record: 77342
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.programmer

Toad is about the ONLY company tha still regards Atari computers as real computers. Most of you guys still think of Atari as nothing more than a game platform and sell them as a simple game server. Its the users of Atari computers who have driven the prices down in private sales. A guy buys a 1040 for $700 and a few years later nobody will pay more than $50 for it. C'mon now folks, the hardware is much better than that. These are REAL computers, not nintendos.

Toad recognizes this fact and sells their stuff as real computers. They also stand behind their sales if something goes wrong. Toad currently sells a 1 meg 1040 for $199 and thats a very good and realistic price, but if a guy advertised one here for sale as an owner looking to sell his stuff, most of you would say thats too much for a 1040. SO admit it folks, either you have real computers or nintendos for sale in this group. I say that Atari made real computers and I bought them as such and will sell them as such when the time comes.

I agree! Using Steve's Atari Peripheral Emulator ver. 1.11 and PROSYS disk duplication software has been a real treat. I have a bunch of original commercial disks that have been successfully duplicated and can now run them all from my old monochrome 386sx. Thanks, too, to Nick Kennedy who introduced the SIO2PC cable that Steve has expanded upon so nicely. Super work! Now if only we could get Darek M. of Xformer to work with Steve and others

>- bostone

I agree. Hey, I like low prices for what i want too; the cheaper the
better, but... I also don't like to be told I shouldn't be able to
sell stuff for the price I ask for it. Bottom line everyone, either
buy from Toad at Toad's prices, or do not buy from them. Open your
own store of Atari stuff and sell it to yourself as cheap as you like.

What's theirs is theirs to sell for what THEY think it's worth.
What's yours is money to part with in a quantity that YOU feel is
worth a particular item or what-not.

Cheers,

Jon

What's PROSYS and can it dupe original like the Super Archiver II can?

For archiving, you might want to try Steve Tucker's PROSYS software with
his Atari Peripheral Emulator. It duplicates the copy protection as well
as the disk and puts it all together into a PC file. Like an ATR image,
you just load up a PRO image into APE and boot. These aren't "cracked"
programs, but actual backups of original disks that run from a PC.

> lvt-cfc@servtech.com

Hi Chris. Sounds to me like you need to chang your Zoom modem settings for use with your Atari. First of all, the 850 will not handle data any faster than 9600bps. So that means right off the bat that you should:

- NOT be using data compression
- set your modem to only work at a maximum of 9600bps
- check what kind (if any) flow control the 850 supports and set the modem likewise
- check on how the 850 treats the CD line from the modem and set the modem similarily

Your Zoom modem has NVRAM for two stored profiles. You can transfer current modem settings to a user profile by doing AT&w0 (for profile 0) or AT&w1 for profile 1. To quickly and easily copy a profile into the current settings, simply do a ATZ0 or ATZ1.

Your Zoom modem manual has all the commands and what they do. Or you can download it in PDF and possibly other forms from Zoom on their web site www.zoomtel.com or directly from Rockwell Intnl.'s semiconductor division; www.tokyo.rockwell.com I think. Good luck. If you have any specific questions, please feel free to email me at ssilicon@lax.net.

Cheers,

Jon

```
Over in the Apple II newsgroups there is talk of a company re-releasing
the Apple //e in a closed system for $150. Since the 8-bit unmodified
is a more advanced machine than the Apple //e, has anyone thought about
getting the rights from JTS and re-releasing it? This would be probably
be a very expensive endevaur(sp?), so I know it probably won't happen,
but it's wishful thinking.

Most of the charm of the Atari 8-bit lied in cartridges and cassettes and
applications..... and much of the charm of the Apple II was that you
could open it up and put all kinds of gadgets in it.

No..... this would go over the head of the average consumer. Unless they
find a way to make it a point-and-click machine, mobody will buy it.

Sad, really. It would be keen to have an Apple II laptop, for example.

From: Michael Pusateri <mike_pusateri@studio.disney.com>
Message-ID: <32CC5114.5501@studio.disney.com>
Source record: 77272

First of all, thank you to all of those that have kept Atari alive over these long years. A fine 800 was my first computer and what I took to college with me. I'll never forget typing reports on Text Wizard!

Having just discovered the world of emulators, I am feverishly trying to get one working on my PC. I am using XL-IT on a Pentium running Win95 (boo, hiss, I know, but it gets my work done :))

Here are my questions:

1. How does the XL-IT interact with the soundboard? I get no sound and haven't found any instructions on how to set it up.

2. When I try to run MULE (tied with Return of Heracles for best game ever) it says that I have paddles, not a joystick hooked up. Without a joystick, I can't run the game.

3. I can't seem to get IMAGEMAN to convert foo.bin to foo.atr. Does a manual for IMAGEMAN exist? I am desperate to play Star Raiders. I'd be indebted to anyone with a working STARRAID.ATR file.

Thanks in advance. Any help would be appreciated.

No, I can't simply buy an old Atari and play it on that, my wife already said no.

From: gold@shell.aros.net
Message-ID: <5ahgjo$r1$1@news.aros.net>
Source record: 77273

In an old e-mail message from Markus Gietzen (author of the XL-IT emulator), he mentions that much of his information came from "Das ATARI Profibuch".

Does anyone know where I could obtain a copy?

Thanks...

35. What's the best boot loader?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-02 00:00:00 UTC
From: lbarber@sonymusic.com
Message-ID: <5ahesu$aoo@news1.sjc.in.sel.sony.com>
Source record: 77274

In the 800 days, on most of my disks with binary files, I had a menu program called "Binary File Loader" which sadly didn't work when I upgraded to a 130XE without the Translator. I wanted to put boot sector loaders on those disks, but the 2 or 3 I came across were single density only. There was a nice one that let you type full text descriptions for the files and stored a lookup table somewhere else on the disk. Are there any good menu loaders for double density disks? I know some games want DOS resident, but I want a menu that's the most compatible first, and looks good second.

Thanks for any info.

The Atari 2600 chipset was reduced in such a way that "TV Boys" are sold
in Asia with over a hundred built-in games for a unit price of anywhere
from US$20 to US$60. About the size of a Genesis controler but with a
complete 2600 system, joystick, and even joystick ports on some models.

An Atari 800 or 5200 made like this would rock.

>But seriously, even if they saw what the 8bits could do, nobody would
>want one. Why? Because the keyboard is in serious need of a redesign.

Granted, it doesn't fit the standard 101-key description but if DOS users
can del with the backslash being in a different place on every keyboard in
the universe, they can deal with the equals sign where the nub of the
Enter key should be.

In Japan or Korea. They're hard to find in the U.S. but when they are
found, they usually don't cost much more than in Japan unless the guy
smuggling them in is a profiteering bastard.

Well I am 50 mile from Leihi Utah. Does that count?

I have 800XL computers used from a School District may have the name engraved in the case somewhere...mostly clean..tested and Guranteed for 30 days plus..? Price $25.00 includs computer to RF Box cable and Power supply..shipped.

Have 130XE semi Clean..tested..may have school name engraved somewher on the unit or a s/s #..Doesn't affect the operation..comes with complete Atari Burn in test and guranteed for 30 days plus..with viedo cable to RF box and power supply..shipping included $35.00

XF 551 disk drive..Nice grey color..comes with sio cable and power supply shipped...guranteed for 30 days plus...$41.00..may have School name or s/s number ingraved in case..does not affect operation..

No these units are not stolen.!!...have worked on them in the past 10 years and know the units, history...all are in good to excellant working condition..

Atari 800XL. Case discolored due to being in a Smokers enviroment, works fine looks yellow.. $19.00 shipped?? still has the same gurantee as the rest.

bob

some easy thing for doing it).

: : : (I assume DOOM runs at 320x480 or some other vertical resolution.Doesn't
: : : DOOM run on a normal VGA card?(VGA doesn't do 640x480x256))

: : Mode X, 320x200.

: Why do you call it mode X?

That's just what it's called. It's a certain variation on regular
320x200 which is linear (i.e., no planes). It was used by lots and lots
of games for a while, but now the trend is towards SVGA.

: : : I remember always using sdoom (non-X) instead of xdoom though.

: : Yeah, it works better. I wish that Linus wasn't such an X bigot,
: : though---then we might have an svgalib Quake instead of just an X one
: : (And GGI, too).

: Do you mean that Linus likes or doesn't like X?

Loves X. I don't think he could live without it.

: It's up to id whether they'll make a SVGA-library version or not.

No, they gave Linus the source so that he could port it. AFAIK, he
wasn't told what to port it to, so he just portted it to X.

: Are you saying that Linus is trying to kill SVGAlib?

I don't know if he is, but I do know that he doesn't like GGI (General
Graphics Interface), which is intended to be a replacement for the setuid
bit on binaries which play with video memory (like X) and SVGAlib.
Apparently he doesn't want to bloat the kernel, but IMHO it's a good idea
because just basic interfaces to video boards are included and the rest is

in a library. It's supposedly smaller than the current video code! They have a web page at http://synergy.caltech.edu/~ggi/.

43. XL BOSS

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-02 00:00:00 UTC
From: Bill Bragg <bbragg@iag.net>
Message-ID: <32CB70DF.3805@iag.net>
Source record: 77355

I just found an unopened XL BOSS and I'd like to know if anyone uses this item. It's by 'Allen Macroware' and it's apparently a replacement OS with some special features like OMNIMON but not quite the same. Its hardware is very similar to the OMNIMON XL but it's comprised of only one masked ROM instead of the two EPROMS on the ONNIMON XL. It also comes with a disk called 'MACROMON' which I guess has some ML monitoring utilities on it to be used with the XL BOSS. It also has the customary toggle switch and empty socket for the original OS ROM chip when installed. The date on this thing is 1982.

Anyone seen these before or remember if they were any good? --Bill B.

Yes its like RIP, I had RIP and CGS on my BBS system a few years ago,
CGS is a Full Animation system that uses all the graphics goodies in the
Atari even DLI's After switching to a Newer version of the pro bbs
core , The CGS was no as compatible and I took Both RIP and CGS off-line,
However this may change.
Tobad there are no local Pro boards in your home town, But at 19.2
20-30 min is that high..

Tandy did the same a few years back on one of there 8bit system, a Golden Run!
on a 8bit machine. Its great to hear that Apple is also doing so. I Still belive there is a DEMAND for an 8bit system. While Im debating if I should order the Cyrix 686/166 upgrade chip I would LOVE to take that money and Order a new version of the Atari 8bit, a 1450XLD would be great, I already have every model Atari made I STILL want more 8bit. No ST stuff. I would buy it in a second!!
Im only debating the 686 chip to play QUAKE Sick huh?

46. WTB instead of Cyrix 686

I would Pay up to $250.00 for a new Atari 8bit system.

Im wondering how many other Atari user would do the same?

Im debating buying QUAKE but would buy instead any new Atari 8bit game
along these lines:

Zybex II
Koronis Rift II
Drconus II Not that stupid "Dear Draconus Hack"
A New Pinball Game with Zybex like Graphics

I think you get the idea.. Its gota be GOOD NEW and in English.

: >
: >No, I meant 2400. I called Bob Puff and he said trying to exceed 2400
: >would result in dropped characters.

: For the record, I have transfered numerous files between my Atari and an
: Amiga at 9600 baud using, on the Atari, an 850, a null-modem cable, and
: Kermit65 software. I have never experienced dropped characters in this
: configuration, and I conclude that the 850 "can" do 9600 when conditions
: are "perfect."

Try Atar-Z-Modem for downloading to the Atari and Ice-T or FlickerTerm-80
for 80-columns.

: On the other hand, I have never been able to get the SAME Atari-with-850-
: and-Kermit65 configuration to even so much as establish command-mode
: communication, with my ZOOM 14.4K modem -- which I normally use from the
: Amiga at 9600.

I think that new modems are broken from all the discussion I hear from
PC'ers about how they need a 16-byte hardware buffer to use fast modems.
The Atari can do 53200 (UltraSpeed 1050USD) on it's serial port.Why can't
the PC?
I could transfer files to/from the Atari/PC at 9600 on my
P:R:Connection,but the Atari could only access my US Robotics Sporter at
4800 and the PC at (barely) 19200.
At 19200,any key press,even one that didn't do anything like the
ALT/SHIFT/CONTROL keys,would cause a lost character.
And speeds above 19200 were out of the question.

: So: take two computers (Amiga and Atari), set 'em up at 9600 so that
: they'll communicate successfully with EACH OTHER, and it turns out that
: the Amiga will talk to the ZOOM modem but the Atari will NOT -- WITHOUT
: changing the modem settings between Amiga/Atari usages. Graphically:

Well Atari term programmes don't "un-pause" the modem.So high speed modems
won't work with the Atari unless you configure the modem to ignore flow
control (the RTS line).
But you need another computer to do that,usually.
But Kermit-65 is the only term programme that seems to follow the RS232
standard and activate the RTS line so that the modem will send data to the
computer.I always go into Kermit-65,Connect,quit and go to Ice-T or BobTerm.

: _ MODEM _
: doesn't _/ _ works
: work _/ _
: / \
: Atari -'\/\/\/\/\,- Amiga
: works

: This is strange, asymmetric, and as yet unexplained. Anybody care to
: offer a theory as to why the third leg of the triangle is a no-go?

Well,I'm now using a Hayse "Optima" 2400bps modem with compression.
When I connect to it at 9600 (which the USR couln't do) I can type and see
what I'm typing,but the modem rarely accepts commands.I have to configure
it at 4800,start dialing,abort,switch to 9600,and keep typing "/a" until
it starts dialing again.

(of course you could also just call at 4800,return to command mode with
"+++",swtich to 9600 and madly type "ATO" until it re-connects)

But once connected,it seems to work.Since I always use graphical term
programmes,I'm going to lose characters anyway.I'll have to use BobTerm at
9600 sometime.But 9600 DOES work,transfers work,which means that lost
characters are the term's fault.The USR wouldn't do transfers at 9600.

: >offer a theory as to why the third leg of the triangle is a no-go?
: >
: >Chris Chiesa
: > lvt-cfc@servtech.com

: Hi Chris. Sounds to me like you need to chang your Zoom modem
: settings for use with your Atari. First of all, the 850 will not
: handle data any faster than 9600bps. So that means right off the bat
: that you should:

How does anybody know this?
Since the 850 handler won't let you switch to 19.200,how does anybody know
that it won't go this fast?Is there some custom disk 850 handler out there?

: - NOT be using data compression

Why not?

: - set your modem to only work at a maximum of 9600bps

It doesn't really matter since it will never send data to the 850 faster
than 9600.

: - check what kind (if any) flow control the 850 supports
: and set the modem likewise

The 850 has RTS and CTS lines.But it doesn't suport flow control.
The handler ignores these lines,except to report their status to a programme.
It would be up to the programme to implement that,and none do.
Of course,anything can suport XON/XOFF.Kermit-65 does.
But since flow control only matters when uploading Z-modem,and the Atari
can't do that,the whole matter is moot.
(though Kermit-65's flow control DOES help to stop character loss)

: - check on how the 850 treats the CD line from the
modem : and set the modem similarily

It ignores the DCD line.It's up to the programme to monitor it and take
action.

But a programme can't comunicate to the modem and 850 at the same time,
so RTS,CTS,and DCD are ignored in most programmes.
(except BBSes,obviously)

: Your Zoom modem has NVRAM for two stored profiles. You can transfer
: current modem settings to a user profile by doing AT&w0 (for profile
: 0) or AT&w1 for profile 1. To quickly and easily copy a profile into
: the current settings, simply do a ATZ0 or ATZ1.

: Your Zoom modem manual has all the commands and what they do. Or you
: can download it in PDF and possibly other forms from Zoom on their web
: site www.zoomtel.com or directly from Rockwell Intnl.'s semiconductor
: division; www.tokyo.rockwell.com I think. Good luck. If you have any
: specific questions, please feel free to email me at ssilicon@lax.net.

Hopefully they have it in ASCII text!!!
(sheesh!)

Source record: 77364

I can understand why new Apple IIs might be produced. There's a lot of elementary schools out there with software the teachers really like and it's hard to find Apple IIs in the papers now.
As for Atari 8 bits, demand could pick up with all the new stuff being produced for involving PCs in the loop. The Atari Peripheral Emulator and SIO2PC could get people wanting Atari computers to hook up and disk drives to allow easy creation of ATR files. The Atari emulators out there work just well enough to get people interested in getting real Ataris. It'll be interesting to see how it all unfolds.

I beg to differ. Once/IF they found the blueprints, the chips would be
very easy to make (and much quicker, too). In fact, with all the
advances in chip technology, the Atari 800 (or any other 8bit) would
be as small as a PDA.

But seriously, even if they saw what the 8bits could do, nobody would
want one. Why? Because the keyboard is in serious need of a redesign.

It just seems to me that the 8bits' keyboard is too compact.
If you were typing (in the standard homerow style) and your finger
slipped, you'd be bound to hit enter or those horridly placed arrow
keys. Worse yet, the reset button!

If somebody made a "redesigned" Atari, they should increase the size
and durability of the keyboard.

Other than that, I'm all for a redesigned Atari. Heck, even Nintendo
convinced me to by a redesigned NES.

>Profibuch".

>Does anyone know where I could obtain a copy?

>Thanks...

No, I've never heard of the book. The books' name does sound german
though, so unless you have a good understanding of german, you may be
out of luck. Markus must be able to understand german (or is german -
take your pick; Markus, if you feel it necessary, correct me...),
which is why he mentioned the book.

Two good books (well, actually three or four) that come off of the top
of my head are:

-Mapping the Atari
-De Re Atari
-The Technical Manuals
-The Atari Basic Source Book

You're probably wondering why I put the Atari Basic Source Book on the
list. Well, if you're planning on writing an emulator, why not type in
Atari Basic instead of copying a rom? Who knows, if you're feeling
brave you could even translate it into x86 assembly or something. That
sure would help make you're emulator one of the fastest.

(Oh, and you'd probably learn a lot about the chips that way also).

BTW: This is all assuming you are planning on programming an
emulator... If not, please forgive me.

Yes, I agree that it would not be an easy feat to accompolish.
Let's just suppose for a moment, however, that JTS or Bushnell or
Tramiel or one of the Atari guys had the blueprints for all of the
chips.

Given the amount of buying and selling going on in this newsgroup
alone, however, would probably enable some company to at least turn a
profit (even if it's a very small profit).

I double-beg to differ. :) Real world scenario: getting the Amiga from
Commodore mothballs to full reproduction cost millions of dollars, if not
tens of millions of dollars--and that was actually with a very large
inventory of just about every necessary component.

Once you were done, yes, the unit costs would be low. But the initial
costs would be high--and finding those original blueprints, chip masks,
etc. would NOT be easy by any stretch of the imagination. Like I say,
the odds of JTS having these in their possession are not what I'd call a
sure bet.

Case in point: When Activision wanted to make their Commodore 64 15-pack
CD, they actually had to ask for cracked versions of certain games on the
Commodore 64 newsgroup. Around the time Activision changed ownership, a
lot of that stuff was lost. If nobody at Activision can hang on to a
floppy...

63. Again: Mac/65 + BBK manuals, Speedscript source

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-03 00:00:00 UTC
From: Richard.Douwes@hcc-lwd.idn.nl
Message-ID: <8eb_9701030509@idn.nl>
Source record: 77284

Last week I sent the MAC/65 manaul to the manual archive, and this week I saw it had arrived.

With the digest having problems, I missed out on last week's postings here. Since then I use Reference.com to receive this group (have EMail only) and have received all messages since 12/24.

So maybe somebody answered this already, but who can provide me with the missing parts in the manual? I believe it was sections 2.4-2.8 I was missing.

When I was looking through my old Atari disks, I also found the Zybex manual (see my other post) and the great BBK programs from A.N.A.L.O.G. I didn't even remember, but I typed in all the manuals/ articles for these too! Now it all comes back to me. I remember I really liked the idea of a "free" editor, database, ml monitor, copier, spreadsheet and game, including the manuals. I wanted to distribute a disk containing all the programs and manuals for a nominal fee. Only one problem: nobody wanted them. Maybe this is my second chance. Anybody want it? Maybe I should upload them to the manual site. Should I also include the UUEncoded program files then?

What about the complete source code for Speedscript? (Even edited out a few mistakes!).

Schreurs brothers: Do you want them on your next CD?

While I'm at it: Is there anybody in the Netherlands who can sell me a disk drive or SIO2PC cable?

When will the digest be back?

What's the meaning of life?

Thank you.

64. Again: Zybex manual

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-03 00:00:00 UTC
From: Richard.Douwes@hcc-lwd.idn.nl
Message-ID: <8e7_9701030509@idn.nl>
Source record: 77285

Please forgive me, I lost the address for the manual site, here's the manual for Zybex and a review I typed in years ago. When the game was brandnew, it was only available on tape. I made a boot disk version of it, and put these 2 text files on side 2 of the disk. I gave it to all my friends who had also bought the tape (of course <G>) and wanted a disk version.

```

This file contains:
Manual: ZYBEX for ATARI XL/XE
Review: ZYBEX review from ATARI USER, vol. 4 No. 1, May 1988
************************************************************************
ZYBEX for ATARI XL/XE

Simultaneous two player option L 2.99

Battle on your own or with a friend through the planets of the
Czoken system to your final destination- Zybex. The great
variety of weird and wonderful weapons ensure there are hundreds
of variations on blasting your opponents to oblivion.

Atari Program - Brian Jobling
Game Design - Michael Owens & Kevin Franklin
Graphics - Michael Owens

ATARI LOADING INSTRUCTIONS:

Switch off computer. Hold down OPTION key and switch on
computer.
This game is just too good to believe and is about the best
arcade game you can imagine. Brilliant graphics, superb music
and sound effects, and the kind of slick gamesplay that will
have you itching for just one more go. The story has two rebels,
Rinser and Cassalana, on an almost suicidal mission to escape
the nightmare that is Death Row. To earn a stay of execution
they must penetrate the very heart of many strange worlds and
collect from each a teleport crystal. Each crystal gives access
to another fantastic world until the excited player reaches the
Restricted Levels and the ultimate challenge- Zybex itself. The
last, Zybex crystal, is all-powerful, and will ensure your
captors remove the death rings from your necks. Shoot your way
through the bizarre and colourful aliens and find exotic weapons
whose differing powers are a joy to discover and use. Each
weapon delivers an even more powerful blast as you pick up more
of the same weapon type.
```

CONTROLS:

JOYSTICK
1 ICONS and FIRE select one or two players
2 Run through alternative player colours by pressing FIRE when over man/woman icon
3 Do not engage AUTOFIRE on sophisticated joysticks.
4 S-STARTS game
5 Weapons fire automatically

KEYBOARD
SELECT to PAUSE game
START to restart
Pressing OPTION while game pauses takes you back to the title screen

The game always begins on the first level, Arcturus, and each level sees you start with the Orbit Weapon. This bullet-firing gun begins on Fire Power 1 but can be further developed to deliver a constant stream of missiles when the player has the maximum (2) orbiting defence pods. The other weapons are the 8-way, the Pulse, the Wall, and the Rail Gun. This last can be developed into a long pole which cannot be stopped. All these weapons begin on Fire Power 1 but by picking up weapons of the same type each can have its power increased up to Fire Power 2. Fireballs and asteroids cannot be destroyed. At the end of most levels lies a commandship which is difficult to eliminate. The heads of these craft are vulnerable.
When killed the player looses one Fire Power from the weapon carried at the time and assuming there are some spare lives, a new life has the player invulnerable to collision for a few seconds (while the figure flashes).
Extra lives lie in the floating suits and after every 10,000 points. Bomus points, represented by a large floating B, are added up at the end of each level.

Have you tried SPEED ACE, Zeppelin's super motorcycle racing game by the same author, Brian Jobling?

ZYBEX review from ATARI USER, vol. 4 No. 1, May 1988

TWO PLAYER DESTRUCTION

Product : Zybex
Price : L 2.99
Supplier : Zeppelin Games, 28 Osborne Road, Newcastle upon Tyne

NE2 2AJ
Tel. : 091-281 4401

AFTER taking a look at the pre-release version of Zybex in the March 1988 issue of Atari User I was delighted when the finished version arrived. Believe me, it was well worth the wait. The game revolves around the fate of two rebels, Rinser and Cassalana. You control them in their bid to escape death row and execution - and before you think or say anything, not the one in Alcatraz.
To do this you have to undertake an almost suicidal mission to the Czoken System.
Once there you have to visit 16 strange worlds and do battle with wave after wave of alien hordes.
If you survive you will be awarded a teleport crystal which allows you access to other planets in the system.
Eventually you will reach the restricted levels and the ultimate challenge- the Zybex itself.
As well as needing the crystals for access to the other planets you are also governed by how many tokens you have collected.
After completing the initial level it is possible to advance up to level 12 in any order you want without a token, but after that you will need three tokens to get to the restricted areas.
These are awarded after the completion of a level. If you survive and retrieve the Zybex, the death rings- placed around your necks by your captors- will be removed.
To help you on the mission you have been given the Orbit weapon with its lowest power level.
As the mission progresses you can increase the destructive force of the Orbit by picking up debris of the same shape that appears on screen after you have blasted an alien wave.
Many different instruments of destruction can be collected including the Rail Gun, the 8-Way, the Wall and the Pulse.
Extra lives are awarded in the same way- simply fly over the spare man when he appears.
The game has an original shooting system. You have built-in auto-fire which allows you to select any of the weapons you have collected by pressing fire to step through them.
In later stages you can have them all going at once- it was a real pleasure watching aliens explode all over the screen under a hail of laser fire.
Your weapons are displayed in two status screens that sandwich the main playfiels- one on each playfield- one for each player.
Another status line near the bottom of the screen shows lives remaining, score and which weapon you are using.
You can have both players on screen at the same time, and luckily you can't shoot each other.
The play area uses a number of graphics modes with a carefully thought out use of colour and superb scrolling. The alien landscapes for the different planets have been beautifully

designed.
Similar games are often criticised about the design and
animation of the hero and aliens, but Zybex doesn't suffer from
any af these faults.
The animation and design of your player is excellent. His arm
jerks back as he fires his weapons and he swings and tucks his
legs as he thrusts upwards or accelerates.
Every alien wave that attacks you is animated its own way: Some
rotate and others pulse as they zoom across the screen.
The game caters for everything you would ever want. The high
Score table has a dual entry mode- two players with two
joysticks can enter their names at the same time.
All game options are controlled using the joystick- all you need
to do is simply highlight the icon you want on the main screen
and away you go.
One of my favourite features is the music. Several pieces are
used throughout, but the main tune is so catchy I found myself
whistling it all day.
A fine finishing touch to a wonderful shoot-'em-up.

Neil Fawcett

One further note: Apple is not releasing this computer. A company called The Tiger Learning Computer Company has licensed the II format from Apple for this project. The II was reduced to a single chip used on their 16 bit IIGS (the chip called the MegaII). It is probably this chip that is being used. Tiger is probably counting on families and schools with aging II's that need replacing as well as new sales.

:
: >The reverse-engineering necessary for such a project was probably
: >justified by the sheer number of those units they can sell at such a low
: >price.
:
: The same is true with a redesigned 800xl/130xe.

Probably not quite as well. The games would be superior, but the costs in
the unit would be higher--more ROM required per game, and more buttons
necessary--these things sound insignificant, but add up in the low-cost
realm...

And if you're talking about a redesign as a computer, you're talking about
a different market altogether. Mind you, I think it would be great, but
wouldn't be the sort of sales a $20-$60 home enterainment system can net.

: This thread is all just wishful thinking... and boy, how I wish it'd
: come true.

The future of computing in a small but significant sector of the market is
in fulfilling the demands of alternative computing users. This is not a
ridiculous premise.

I need some information on converting atari equipment to work in the US,

I am moving to the USA and I have two atari 800xl's and a 65xe. I know I can just buy new power cables for the power supply, however I am worried about how I will convert the TV output. IS it possible??? can anyone help? otherwise I will have to ship my tv over and have its power supply converted :(

thank you in advance for any help.

feel free to email me a reply direct

Sorry, no. I have one, but I'm not parting with it. It's German, by the
way.

If that is of any help, here's the data:
Das ATARI Profibuch
by Julian Reschke/Andreas Wiethoff
SYBEX-Verlag GmbH, Dï¿½sseldorf
ISBN 3-88745-605-X
291 pages

It contains: Memory Map (similar to Mapping the Atari), Tables (Asm
opcodes, key codes, BASIC opcodes), Pin layouts (ANTIC, GTIA, POKEY, PIA,
external plugs), 800XL circuit layout.

Bye,
Thomas

Yes, but translating Basic to x86 would mean that Atari progs that tap into routines in BASIC (not necessarily legally) wouldn't work. Just what we need - more incompatibilities. On the plus side, we culd drop the perennial copyright thread from the newsgroup.

>

Getting sound to work is something I'd like to do. I have a
Soundblaster Pro clone card, and I'm able to get sound using version
0.14 of XLit, but 0.16 refuses to work. As far as I know it gets the
settings of your sound card from the "SET SOUND" environment variable
(ie: SET SOUND16= A220 I5 D1 T4). But I don't use WIN 95 so how that
goes for you I don't know.
As for M*U*L*E using paddles, It seems that you might be booting to
the old OS?. I've found that MULE only likes the pure XL mode (I have
2 OS's built into my 130XE, one acts like a translator which MULE
hates).
Imageman? and what is the "FOO.BIN"? I know Imageman is an ATR
utility, but I don't think that it works as intended. I have tried to
use it to extract files out of ATR images, and place them into ATR
images, but the program quits when trying to extract over 3 files. I
made up 184k images and placed EXE files into them for my ATARI to try
out, but the files were not accessable- I get error 165 or something

like that. So my thoughts on "Imageman" - don't bother....

If you want a working ATR with Star Raiders- check my Home Page
(hopefully listed at the end).

No REAL Atari? Hmmm, bummer- there's nothing like it :)

>
>Thanks for any info.

Ok, I've attached the file WARP1050.COM, and also an ARCed copy of the file- just in case the COM file gets stuffed up in the upload.
When you run this on the ATARI, [L]oad the file from DOS. You will be at the menu screen. The first thing to do is FORMAT a disk to use- select "init disk". You can select either single/enhanced/or DOUBLE density. After doing this you must exit to DOS (probably reboot- this is the easiest way). [C]opy the files you want to place onto the disk- you can place EXE/BIN/COM/ and BAS (yes it will load basic files too!!). After copying the files, you MUST remember to LOCK ALL FILES- or the WARP1050 program will NOT see the files on the disk. This information is NOT listed in the program, it took me weeks to figure out WHY the program didn't work, untill I accidently locked one of the files and YES it WORKED!!
Ok, now that you have done all this, you run the WARP1050 program, select the "Name Input" function, and type in a description of each file AS THEY COME UP! If you press ENTER accidently, you will have to start over.. and try not to make the descriptions too long, cause sometimes it tends to overwrite itself, but these cases don't happen often..
Phew, after doing all this it's time to see if it's gonna work! I've found that most games etc will run fine with it, but there are a few around that seem to defy ANY loaders.
Anyway, enjoy.... It's in Ultra Speed too if your Disk drive is capable. I've got almost ALL my EXE/COM's using this loader. I've even got a version for the old 810 HAPPY drive in WARP speed if anyone's interested....

Is there a decent 8-bit emulator (shareware/freeware preferably) with sound support out there? Without building a pokey card?

88. Kermit-65 and hish speed modems:A winning combination!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-03 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <5ajinc$47f@login.freenet.columbus.oh.us>
Source record: 77309

Well this is interesting.

If you've ever used Kermit-65 and newer term programmes like Ice-T and
FlickerTerm-80,you might think of Kermit as obsolete and slow.
But Kermit-65 suports one thing that they don't,XON/XOFF flow control.
With a high speed modem,you can use Kermit-65 and NEVER lose characters.
Even at 9600 on a P:R:Connection!
Also,the kermit protocol sends control characters without actually sending
them.(it sends a "escape code" that represents them.The escape code
doesn't actually have a ESC in it)
So ^S and ^Q in a file won't cause your modem to abort.And no garnage at
the end of a file like you get with Ice-T's X-modem.
And conversion of text files as well.
Just set your modem to XON/XOFF flow control,set Kermit-65 with
SET FLOW-CONTROL ON.
Hayse modems are set with AT&K4.
(or AT&K2???)

Does anyone have detailed documentation on the undocumented opcodes in a 65C02 processor? I found one list on the net, but it's incomplete and has some errors. What I lack is a list of condition codes affected by each instruction and details on how some of them use the registers.

Also, if anybody has a copy of the Atari Assembler/Editor cartridge, I could sure use it.

>aging II's that need replacing as well as new sales.

<DREAM>
This is what I could see if a company did want to re-release the 8-bit.
Consolidate the entire 8-bit chip set into one chip, include 256K Ram,
and allow a software switch to run at a faster speed. Instead of Basic
it should include Action!.

This design could incorporate the Gumby upgrade to allow stereo sound,
and the second PIA modification to allow more digital inputs and
outputs.

Actually, if only this chip was produced, I'm sure there would be a lot
of electronic hobbiests that would love to use the chip in products,
especially if this could be sold for under $30. This price would allow
a home computer version to be sold for under $99.

</DREAM>

></DREAM>

To be perfectly honest, I could possibly see a one-chip computer as being useful for electronics hobbyists who want to be able to lead two pins to a video output and another bundle to a keyboard or keypad, and modify their 6502 code on the fly.

One boast of old computers is that wiring this and that to one of the ports and running a few lines of code will allow one to operate appliances or weather equipment or such things. Seems a bit pointless to need a two-pound keyboard-sized box of old chips and a floppy drive to do what a 6502 and an EPROM can do. With an entire computer, such as the Apple II, integrated onto a chip, it would probably be easier to make such applications and devices.

For example, in ANTIC there was published some lie detector that worked through the joystick port. So you program the software for it in 6502 on the Atari. When you're all done, you burn your program into a ROM like you would for a cartridge. Then you make an Atari. You get a circuit board, slap in the 6502, slap in the ROM, slap in some RAM wherrever you need it, and hook all that up to the custom chip. Then cut off the DB9 cable from your lie detector and wire the PCB from it to the custom chip. Wire the "other joystick port" to some buttons for input and pipe the video out into a small portable TV.

The Commodore 64 and Apple II would be much better suited for things like this, however, because their hardware information is much more readily

available. Compare the number of people who own the Commodore 64/128 Programmer's Reference Manual to those who own De Re Atari (because Atari's ref manual sucks). Perhaps a whole other 6502 chipset, or at least another operating system could be written for this purpose.

Of course, I'd like to disqualify everything I've just said by stating I have no formal training in electronics and I don't even know how to solder, I've only "heard things". But someone who does know about this stuff can probably see what I'm getting at and tell us exactly why it's a load of bull.

Whilst reading the usual rubbish I find here, Bill Bragg wrote something
interesting to All about XL BOSS:

Hello Bill,

BB> I just found an unopened XL BOSS and I'd like to know if anyone uses
BB> this item. It's by 'Allen Macroware' and it's apparently a replacement
BB> Anyone seen these before or remember if they were any good? --Bill

I certainly remember the XL Boss, although I never owned one. As you said,
they're very similar to OMNIMON. Sadly, I don't recall what any review at the
time had to say about it.

97. ATARI equipment MUST SELL!!!!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-03 00:00:00 UTC
From: terry.ortman@fantasy.com
Message-ID: <c5.6231.42@fantasy.com>
Source record: 77318

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $50.00 or best offer. These SELL AT Video 61 for $49.95 used.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $90.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $55.00.

Both ATR8000 and Dual Disk Drives, $125.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them. Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00. These sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package. These are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to

re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for $59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

ATARI RELATED MAGAZINES, Found this unopened box that I had boxed up for a person, but then he never sent the order in:

ATARI EXPLORER, February 1985, Cover Price $3.00
ATARI EXPLORER, April/May 1985, Cover Price $3.00
ATARI EXPLORER, Summer 1995, Cover Price $3.00, $3.95 Canadian
ATARI EXPLORER, Winter 1986, Cover Price $3/$3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Sept/Oct 1986, Cover Price $2.95 $3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Nov/Dec 1986, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Spring 1987, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Summer 1986, Cover Price $2.95 $3.95 In Canada

The Above Magazines are in good/fair confition. They are from the same collection the above 1027, 1050, are from, the previous owner suffered a stroke and asked me to dispose of these for him, as he has moved, and I am asking FAIR MARKET VALUE, as can be seen from the prices sent to me by Video 61, who seem to use the Internet and stocks and sells Atari equipment, Video 61 may send me an offer on these then, as I need the cash.

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

I'm trying to load Alternate Reality - The City using XL-it. I can
run AR-The Dungeon just fine, but whenever I try loading AR-The City,
it doesn't want to load Disk 1, side 2.

I've tried converting the .atr files over to .xld

I've tried getting new copies of the .atr files.

Nothing seems to work.

Any Suggestions?

>Why not?

Well, say if the 850 cannot handle a data rate more than 9600bps, and
the modem has a 9600bps connection, with data compression then the
modem will end up transfering more data than 9600bps. This obviously
would exceed what the 850 can handle.
>
>: - set your modem to only work at a maximum of 9600bps

It sure might try to.

>The 850 has RTS and CTS lines.But it doesn't suport flow control.

That is simply but one kind of flow control. There is also xon xoff.

>The handler ignores these lines,except to report their status to a programme.
>It would be up to the programme to implement that,and none do.
>Of course,anything can suport XON/XOFF.Kermit-65 does.
>But since flow control only matters when uploading Z-modem,and the Atari
>can't do that,the whole matter is moot.
>(though Kermit-65's flow control DOES help to stop character loss)

First, there is a Zmodem for Atari. Second, you admit that it matters
in Kermit. And thirdly a file transfer through a protocol looks just
the same to the modem and the serial port on the 850 (simply data in
and/or out) as any other data exchange, the only exception being that
the data flow is more busy. It is the term software or what have you
that distinguishes between a protocol and regular data exchange.

>
> : - check on how the 850 treats the CD line from the
>modem : and set the modem similarily
>
>It ignores the DCD line.It's up to the programme to monitor it and take
>action.

Okay okay. So what I should have asked instead of how the 850 looks
at it I should have asked how the 850 _combined_ with his term
software of choice looks at the signal lines. Whatever that
combination supports or expects is how the modem should be configured.

>But a programme can't comunicate to the modem and 850 at the same time,

Huh? A program can't communicate to the modem at all but THROUGH the
850.

>so RTS,CTS,and DCD are ignored in most programmes.
>(except BBSes,obviously)

How about his favorite term program?

Yes they do, or did. I got some text files back when those were
supported. They used to do 'em all in Word for Win, Text, Post
Script, and such. Now they just put stuff in PDF. I have text file
manuals for Rockwell based older 14.4 & 28.8 modems.

Want 'em, anybody want them posted in the newsgroup?

Cheers,

Jon

101. Atari reasources online

Newsgroup: comp.sys.atari.8bit

Close.

When I looked into it (as a software publisher) I found out a few things.

For example, shrink-wrap licensing has only held up in the courts of two states. I can't remember exactly which ones, but the names started with the letter M. (Mississippi and Missouri?) Anyhow, it boils down to the idea that by opening a package you are subject to what is printed on it. Doesn't hold up, no signature.

Also, so often people go on crusades about software copyrights and it's a black-and-white issue to them but...they'll slide through a stop sign. Or video tape a broadcast show (other issues apply there.)

Wether or not something is copyrighted is one issue.

The real question is if somebody will seek damages. Highly doubtful for Atari 8-bit software. Copyrights exist to protect the author's rights. Proving there is a market value is another.

>etc etc. Where does such a view come from?
>
I know what you mean. I think it's not that games were that much
better. But that we were different. We were young and exploring the
computer. It was new. It was a novelty. And when your young
everything looked bright and better. However there are qualities in
those old games that game maker have forgotten. Mainly imagination.
I'm quite discusted when I go to arcades lately. Most of the games
are running on the same themes. The martial arts ones are the worst.
That has been done. However with more and more violence today. And
thats a lot of the problem. Game makers seem to think you have a
better game when you add more gore. But think about some of the old
games and how they were imaginative. Pacman. Joust. Pitfall 1 and
2. Hero. These games had imagination that you see rarely these days.
There are some exceptions like Earthworm Jim and the new Pitfall but
they are generally the exception. My recomendation is to try to think
up something involving but overall fun and a game you can't take too
seriously. Simulations of reality are great sometimes. However a lot
of the time we want to escape from reality. Put in more variations on
themes in games. And not just the same things weve all beens seeing
for years now.

By the way you didn't say who you were. Are you a games programmer?

From: nickb@primenet.com
Message-ID: <5al4gh$s0i@nnrp1.news.primenet.com>
Source record: 77228

I solved my little problem.

I changed my VBI into a DLI and it magically fixed itself.

So I cleaned up all the sloppy code and it all still works. I even got a couple scrolls working... I just have to put text in them and make them reset when they're done, right now they just scroll through the data for the software sprites and such, and the little tables. The software sprites are running across my little background and I really am surprised I got this far.

But I'd rather have a VBI. What did I do wrong? I set 546 and 547 and enabled them, and they run. Then they invariably blow the whole program. Half the time it works, half the time it doesn't. I thought it was the addition of other DLI's, but no. I have FIVE of them running and they take up half my CPU time, almost. Perhaps I'll use even more. But I think I'd be better off if I at least set the colors for the top half of the screen in a VBI instead of a DLI on the first scanline.

By the way, I make sure all the DLI's are in the right place by setting the DLI to a certain routine, but I don't enable them until just before that scanline comes up, so don't worry about my plan suddenly falling apart.

Now I just need a fricken logo and music. I hope I can find some skilled people on IRC. Maybe I'll ask Kibo to loan me one of his nasty fonts.

Hey Bill... You are the only one I know who complains about manual archives. Besides mine, there are more manual archives that are bigger and even include software images as well! Why hasn't anyone complained??? Simple: THERE'S NO BENEFIT!!!

As much as people are suing nowadays, people simply don't sue for the heck of it. Lawyers cost mucho $$$ and no idiot is going to sue for damages only to have his "winnings" sapped by the lawyer for fees. Heck, they'll prolly lose money in the process. Sound beneficial to you?

If my manual archive makes you worry, look at all the other manual archives on the net. (http://www.sponsor.net/~gchance is a huge example; check out the MANUAL ARCHIVES (with ROM IMAGES!!!) for 2600, 5200, 7800, and Coleco systems)

(Now if you want a manual YOU WROTE to be removed, that's another story.)

I'm surprised you haven't complained about Yogi's archive. He's doing an even more "illegal act" than I am. Is anyone complaining? *NO*!!!

Oh, and come to #rgvc (on EFnet IRC) if you want further discussion from those who own bigger manual archives.

> get ahold of the program?

It was compressed with GnuZip, a single file compressor. You can get the
executable (gzip) for almost ANY operating system. Look around on an FTP
server near you in the archiver directory.

You decompress with the parameter "-d", i.e. "gzip -d file.gz". Or you can
copy gzip.exe to gunzip.exe, in which case it should automatically be in
decompress mode.

Bye,
Thomas

>indebted to anyone with a working STARRAID.ATR file.

Well, in my last reply/post I quoted that IMAGEMAN didn't seem to
work. Sorry, I was talking about the program ATARIMG. I have now a
copy of IMAGEMAN, and intend to try it out. It was ATARIMG that didn't
work- it would bomb out when trying to extract over 3 files, and when
placing files into an ATR- the files would NOT be accessable for the
ATARI. Altho I was using 184k ATR (D/D) images to work with, it might
work with Single Density images. I'll have to do some more work on it.
Again, sorry- I'll have to make sure what I am talking about is
actually the subject in question.

I agree,

I picked up an old 286 with a 40 meg IDE drive for $50.00, then built an
SIO2PC cable. This way I when I D/L software to my PC off the net I can
transfer it with a 3.5 inch disk from my 486 to the 286. Works great and
I can always upgrade the 40 meg drive if I need more space.

Does anyone have a list of SCSI drives that'll format 256 byte sectors? I obviously have an MIO I'm trying to get setup and my only drive is an ST225N (20MB). I've heard that the ST231N (30MB) won't work with an MIO. Anybody got a large drive, say 60MB or so, to work with an MIO ... and I mean direct SCSI WITHOUT an Adaptec 4000a. I don't have a 4000a and have no idea where I'd get such an animal. Which brings about another interesting question ... anybody know where I can get an Adaptec 4000a? --Bill B.

No, Toad is not the ONLY company. Computer Direct is pretty well
exclusively devoted to TOS and MagiC platforms. Toad is hyping their PCs
(with Gemulator built in) and their Internet service provider business.
They still sell Atari stuff, and provide support, but appear to be
winding down their involvement in the world of TOS computing. Computer
Direct, on the other hand, will only sell you a Mac or Mac Clone if you
REALLY insist, and steadfastly refuse to have anything whatsoever to do
with PCs. Check them out at http://compdirect.com. They are doing some
really amazing stuff.

Bill Merik
VERY satisfied Computer Direct customer and beta tester.

Source record: 77240

MIDI? Sure! There are interfaces and software around. There's a "build it yourself" interface described in a file called SIO2MIDI or something like that, which should be available through GEnie or some BBSs. There's the MidiMax interface, which I have and use, which was made by WizzTronics and included the MMS system. There's also the MidiMate interface and software, which I believe B&C Computervisions still stocks and sells. It's probably the most elaborate, but nowhere near the level you'd get in another platform. Still, for a beginner, it's probably the best of the three.

Good luck.

Source record: 77243

Well, my old PC finally died. The only reason I kept it around was
because it had a modem and my 1200XL doesn't. So now I need to buy
a modem (1200 bps at least) that connects directly to the SIO port
and I need a term program that supports VT100 or VT102 in 80 columns
(without XEP80). If anyone can sell me this stuff please email me.
I can only spend about 30 bucks on this right now.

Thanks,
Justin

I have used a HP DeskJet 500 on several XL/XE's with out any problems.
It was done using a ICD MIO interface. The only problem is you have to
create your own printer driver or embed you printer control codes within
the document.

Take care, Jon

130. Transferring to IBM PC

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-05 00:00:00 UTC
From: siano@cceb.med.upenn.edu
Message-ID: <5anj8v$2b@netnews.upenn.edu>
Source record: 77253

Here's a problem I've asked about before, but that was a long
time ago, and I never followed up on it. I've got an old 800 system
gathering dust, with a lot of 5.25" disks that have some text files
I'd like to keep, and transer to my IBM system.
These are the low-density disks, using the original 810 disk
drive's formatting. (I do have the later drive, the 1040 or somesuch.)
So, the IBm can't read them at all.

How might I go about transferring them? It'd be terrific if I
could set up a null modem cable through my 850 interface, but when a
friend and I tried this, I couldn't get Procomm for Windows
to talk with the 850 Express modem program for the Atari 800.

Any suggestions? Pointers to Web pages? People in the Delaware
Valley that might be willing to help? Replies by Email, please.

: -thanx-

.gz indicates that the file is compress using the GNU gzip compression
program. It's freely available. The source is at prep.ai.mit.edu in
/pub/gnu. For DOS, a precompiled version is available at:

ftp://ftp.cdrom.com/pub/simtelnet/gnu/djgpp/v2gnu/gzp124b.zip

|
| Its stupid or even SICK to see my Pentium 120 serving files
| to my 8bit..I dont see the Logic here. Get a MIO/BB or KP
| interface and let the CLONE ALONE.
|
Since most folks don't use two computers simultaneously, why NOT use the P120 as a fileserver for your 8-bit while you are using it instead of the P120?
-
Actually, if APE works under a Win95 DOS box, there should be no reason why one could not use both computers simultaneously, if you had the need.
-
Another point: Why invest in extra hardware if you already have the gear to due the job. Also, as others have pointed out, even a lowly 286 does a fine job with APE, and can give a useful purpose to a machine many current PC owners would consider fodder for the scrap heap. Often such a machine can be had for about the same price a MIO, and certainly for less than a Black Box or KP interface.
-
Lastly, try using a MIO, BB, or KP interface on a 1200XL. <grin>

133. FS: Atari Computer Goods! More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-05 00:00:00 UTC
From: bensmith@teleport.com

B&C Computervision have MidiMax with software. It plugs into the SIO port and gives you a midi interface. I don't know much about the software; I do know that one late version was for expanded memory xl/xe machines only.

>you have real computers or nintendos for sale in this group. I say that
>Atari made real computers and I bought them as such and will sell them as
>such when the time comes.

I need to correct you in that you may TRY to sell your Atari for any price you wish to ask for, but finding a sucker to pay it is another matter altogether. I can go to local electronic discount resellers(USED) and find 1040ST computers stacked in bins for $30 to $50 each depending on condition. If you purchased your computer thinking it would hold its value like a fine collectable, you are VERY mistaken. Computers lose their value almost as fast as the ice-cream cone you purchase from a street-side vendor on a HOT summer day. If I constantly thought about what I have paid for hardware and what its worth now. I would NEVER buy another computer again...

Ok, you load the first disk at position D1, boot it up, then load your
character disk (if applicable) to position D1 and get your character
loaded. You'll then be asked for DISK 1 SIDE 2,place it in position D1
after loading the game and it should work. After it has finished with
D1S2, you'll then have to load D2S1 at position D1, and D2S2 at
position D2. I haven't actually got this far, I've only tried booting
D1S1 quite a while ago to see if XLit would load it. I'm using the way
a REAL ATARI needs the disks. To summorise, here are the disks, and
the position they need.

D1S1- of course D1
Character disk- D1
D1S2 D1
D2S1 D1
D2S2 D2

It wasn't made to use more than 2 drives, like the dungeon is,
so your stuck using D1 and D2, (D2 only for disk 2 side 2)
If you need to know how to change the ATR image positions while in
XLit, press F7 then you can use ? to bring up the commands. I think
you just type the drive number position and the filename
ie. 1 ARCITY11.ATR
2 ARCITY12.ATR

I hope this has helped you...

Steve.

The best thing to do for compressed ftp downloads is to get WinZip 5.6.
It will unZip PKZip files, .Z, .GZ, and .TAR, maybe a few others.

Atari sold off the Vax with all the 8bit specs and designs many, many years ago and they never took a copy first. It's al lost :-(

Hi Ron,

So your friend needs an Atari 800? Not a problem, I've got about a dozen or so and I also have plenty of Atari 850's as well. I'll give you them both for $25.00 plus $7.50 Shipping (The stuff is rather heavy).

Let me know if there is anything else you need.

Terry,

I told you I'd trade one of my TRAK AT-D2's to you for the Turbo-816.
If you want it then lets trade, your never gonna sell that stuff at those
prices, have an auction, who knows you might get close to some of those
prices, but most of that stuff your just charging ridiculous prices or
hasn't that occured to you yet, you've been sitting on that stuff for
years and nobody's taken it, that should be a pretty good indication that
its time to slash your prices like 30%.

Sounds like you have never used a 1200XL keyboard. Also, let us not forget
the Transkey upgrade which let you use PC keyboards. I've got to dig mine out
of the basement and get this Focus 9000 Keyboard hooked up to it! A big bad
nasty keyboard!

Sheesh... And I thought the "story" of the manufacturer of the 1450XLD
cases whos bashed them all to pieces made me sick..

The thought of Atari ditching their blueprints to a some person/company whos
first job was to erase everything on that vax makes we want to throw up!

I have some program loader that only takes up a few sectors and it can use both single and double density drives. All I can remember off the top of my head is that it had red and green text, used the big text mode for the names of the files and was darn fast. It was, as I recall, a "Real" product. Not shareware. I'll have to see if I can find it somewhere...

```
The Atari 8-bit Hardware Upgrade,
Modification and Add-On FAQ
==================================

| | |
| | |
/ | \

Version 0.6

Updated January 5, 1997

Maintained by: David A. Paterson
Mailto: davepat@total.net

INTRODUCTION

This is a very basic version. I am adding as people give feedback to what they want to see,
and how they want to see it. Any info or comments you have are more than welcome!

PURPOSE

This FAQ exists to describe the various hardware modifications available to the Atari 8-bit
user. It does not teach you how to do them. It definitely doesn't take any responsibility
for the results if you do try them. But it will try to give you some information about
where to find more information, which upgrades (or "hacks") are best, and who to consult if
things go wrong. For addresses and phone numbers of any of the companies listed, consult
the Vendors and Developers List, posted to comp.sys.atari.8-bit at or about the 15th of
each month.

It also exists to describe the many wild, Woolley and wonderful products that have been
produced for the Atari 8-bit. Many are unique, some may be apocryphal. Mainstream items
like printers, modems, disk drives and cassette decks are all excluded, unless I feel
otherwise. Temperature gauges, combination printer buffer/RAMdisks that run through the
joystick port, and other such are fair game.

If you're looking for a list of Atari hardware (real or vapour-ware) or for a list of Atari
compatible disk drives, check out the comp.sys.atari.8bit FAQ, posted every two months, and
stored at the University of Michigan archive (gopher://gopher.archive.umich.edu).

POSTING FREQUENCY

This FAQ is posted whenever I remember to post it. It is posted to comp.sys.atari.8bit.

OTHER STUFF I THOUGHT I SHOULD INCLUDE SOMEWHERE

This FAQ owes a debt of gratitude to Michael Current, Bill Kendrick, Glenn Saunders, Alan
Sharkis, William Moeller, Ryan Goolevitch and Ben Corr for their contributions. Bob Woolley
and Bob Puff (CSS) also deserve mention, since they are responsible for so many of the
```

items listed here. All errors, omissions, blatant mistakes and attitude problems are mine. If you notice any, tell me!

Many plans for upgrades and add-ons are archived at the BRiTiSH Underground Atari 8bit Web page:
http://intrepid.mcs.kent.edu/~clisowsk/8bit.html

PART I - RAM Upgrades

General

The 6502 microprocessor at the heart of every Atari 8-bit has a sixteen bit wide address bus. What this means is that it can access up to 2^16 memory locations. That's 65536 bytes. Some people, wanting more memory, came up with a variety of techniques to use more memory. Most were built around the idea of bank switching. Bank switching means that you swap chunks of memory around so that the CPU can see them when necessary. Most schemes use 16k banks, though 4k and 32k have also been tried.

Atari 400

The original Atari 400 had either 8k or 16k. Atari produced a board with 48k. Mosaic produced a 32k board, as well as a 64k board with 48k RAM plus 4 4k RAM banks. (ANL 13, IFC)

Atari 800

The Atari 800 came with three memory slots. Each slot could contain Atari 8k or 16k RAM boards. Mosaic produced 32k and 64k boards. Three 64k boards could be combined for 192k.

Axlon produced the 128k RAMdisk board. It banks 16k, using $CFFF as a control register. Banked memory appears from $4000 to $7FFF.

David Byrd created the "800 PLUS 288K UPGRADE" which rewired existing 16k RAM boards, but required additional work to become fully Axlon compatible. A nasty sort of flame war erupted between David Byrd and Jay Torres of the Windhover Project over who invented the upgrade.

Magna systems produced 256k, 512k and 1M boards which followed the Axlon standard. (ANL 65, 68)

Atari 1200xl

See 800xl.

Atari 600xl

As shipped, the Atari 600xl came with 16k RAM. Atari released the 1064 memory module which expanded the 600xl to 64k. MPP, now Supra, produced the Microram 64k Memory Board (ANL 19, 28)

RC Systems produced three expansion modules for the 600xl, raising memory to 32k, 48k or 64k (ANL 26, 12)

Richard Gore produced the Yorky, a 256k board which plugs in to the PBI. It provides full compatibility with 130xe type banking. It is for use on 600xls upgraded internally to 64k, or on 800xls. (AC 3/2, 10)

The 600xl can be internally upgraded to 64k by replacing the two RAM chips, and adding selects for the two address lines.

Atari 800xl

The Atari 800xl came with 64k RAM internal. To access RAM hidden under the OS ROMs, the PIA chip was used (PORTB, used for STICK(2) and (3) on the original 800). Claus Bucholtz published plans for a 256k upgrade which banked 32k at a time using PORTB for control in Byte magazine. (Byte Sept 85)

ICD released the RAMBO upgrade, providing 256k in 16k banks, using PORTB. Newell came out with the 256k XL, which would work on a 1200xl or 800xl, providing 256k total memory, . The two upgrades used different sequences to access their banks. (ANL 44, 115)

Charles Bucholtz updated his upgrade to use 16k banks after the release of the 130xe. Most of the 800xl upgrades can be made compatible with Antic banking. The only possible problem would be when Antic and the CPU are supposed to be using different memory banks.

The Yorky will also provide 256k on an 800xl (see the entry under 600xl).

Newell released 1Meg and 4Meg upgrades for the 800xl. These banked 16k as well, and required disabling internal BASIC to properly access the memory.

Fine Tooned Engineering, having bought the rights to ICD and Newell's products, is bringing out a third method in the Mars 8. Though not yet released, it will use SIMMs for 256k, 1Meg or 4Meg RAM.

The 800xl is arguably the most popular Atari 8-bit for upgrades, since most 800xls have socketed chips.

Atari 130xe

The 130xe was the first "official" method of banking memory. It too used PORTB, but with an added twist: ANTIC and the CPU could access different banks. This provided headaches for some owners of "older" upgrades, but few programs took advantage of this feature (SpartaDos Wedge and VideoBlitz demo only). Upgrades for the 130xe include replacing one set of 64k chips with 256k chips, raising the RAM to 320k. Adding another 256k for 576k total has also been done. These were designed by Scott Peterson, as was a 1088k upgrade.

PART II - Video

Upgrades

The most common video upgrades are the SuperVideo series, described in AC 2/6. Plans were provided for the 600xl, 800xl, 1200xl and 130xe. The SuperVideo upgrade provides the forgotten chroma signal on the monitor port. It corrects a number of errors in the parts in the Atari video circuit, resulting in a clearer image, particularly on monitors.

Providing TTL output was also covered in AC 2/6. Bob Woolley provided plans for the circuit, as well as instructions for getting TTL output from an XEP80. Be warned that the output is not in the standard Atari colours; on a CGA type screen, the sixteen possible shades are translated into eight colours.

80 column devices

Since the 400/800 were released in 1979, people have been clamouring for better text displays than the default 40x24. Two products were released for the 800: The Austin-Franklin 80 column board and the Bit 3 80 column board were both for use in the Atari 800. They replaced the third memory module. The Austin-Franklin board came with a "Right Cartridge" which provided the drivers. Removing the cartridge disabled the board. Some software would not run with an 80-column board installed.

Ace 80/80xl was a cartridge released which provided 80 columns by using bitmapped graphics on an 80 column screen. A similar technique was used in the Newell Omniview, an add-on for their Omnimon.

Atari's entry into the 80 column field was the much maligned XEP80. For maximum compatibility, the XEP80 attaches to the computer via a joystick port. It includes three character sets, 8k internally, and a parallel printer port. The software provided by Atari supports a 320x200 graphics mode. This mode only supports direct bit images. Hacks have been released which hook the XEP80 on via the parallel bus.

Recent terminal programs have added two other display techniques. ICE-T uses a graphics 8 screen and fine scrolling for its display. FlickerTerm uses two graphics 0 screens a half-character apart, each displayed during alternate vertical blanks.

In a series of articles in the SLCC newsletter, Bob Woolley gave hardware plans for installing an 80-column TTL output inside an XL.

Nir-PAL

With the decline of Atari in North America, more and more quality software was migrating across the Atlantic which was all but unusable. Why? European Ataris are built for the PAL broadcast standard; North American Ataris use NTSC. Not knowing it was impossible, Nir Dary upgraded an NTSC Atari to run PAL software properly. Swap out the NTSC Antic chip for a PAL Antic, do a minor modification to the OS, and voila! Your Atari is ready to join the EU. (Better stop before the abbreviation police arrive!)

Genlock

In October and November of 1991, Michael St Pierre published articles in the SLCC Journal describing plans for a monochrome Genlock. A genlock is a system to synchronize live video with a computer image. Graphics can be overlaid, faded in or out, or used for titling.

In 1994, Michael announced Prism Studio, a full colour genlock. It is sold by Mytek.

Computer Eyes

Computer Eyes was a video capture system which plugged into two joystick ports. It could render images in a variety of modes. It required a composite video source. (ANL 35, 53)

Easy Scan

Take a cartridge, add a fibre-optic cable, and hook it onto a printer, and you've got Easy-Scan, an image scanner for the Atari 8-bit. Innovative Concepts produced this item. (ANT 7/6, 43)

PART III - Operating Systems

The original 400/800 had a 10k ROM OS. There was nothing in memory from $C000-CFFF. The later xl/xe models all had 16k OSes. As an added bonus, the xl/xe OS was in a 28 pin ROM that was pin compatible with a 27128 EPROM. What does this mean to the layman? With a little knowledge of 6502 assembly and an EPROM burner, you can write your own operating system (or at least change Atari's).

Computer OS
-------- --

400/800 Rev A. No self test; Memo Pad mode.
Rev B. Fixes several bugs in Rev A.

1200xl XL OS. Some incompatibilities with
400/800 OS

600xl/800xl Revised XL OS. Includes parallel
bus handlers. Internal BASIC.

65xe/130xe Revised XL OS. (as above)

xegs Modified XL OS. Self-test mode
changed. Internal Missile Command
and BASIC.

Operating System upgrades

UltraSpeed + OS : from CSS. Supports high speed disk communication. Drives 1 through 9. Any RAM upgrade. Includes three modes: standard XL/XE OS; 400/800 OS; UltraSpeed+ OS. For XL/XE systems.

Omnimon: from Newell. M/l monitor for 400/800. Installs into $C000 page of memory, otherwise unused.

RAMROD OS: from Newell. Replacement for 400/800. Includes accelerated floating point math package.

RAMROD XL: from Newell. OS speed-up routines, fast math, and Omnimon. Includes option for second OS.

Omniview: from Newell. Adds 80 column display, using Graphics 8 3-bit wide characters. Add-on for RAMROD boards, 400/800 and xl/xe versions.

XL Boss: from Allen Macroware. OS replacement for XL model computers. Includes m/l monitor. 400/800 OS compatible.

TurBoss: available from KP and Best. Fast math and fast screen routines. For XL/XE computers.

Turbo 816: Chuck Steinman at Dataque released a modified OS that used the 16 bit capability of the 65816 CPU upgrade he sold. For XL/XE computers.

DP OS Version 4: my own effort (don't ask about versions 1 through 3!). Fast floating point math, fast screen display, graphics 0 screen dump, fast keyboard repeat. For XL/XE computers.

SmartOS: This is a hardware upgrade that installs a battery-backed RAM chip into your XL/XE. This lets you fool around with changing the OS and not have to burn new EPROMs constantly. Presented in AC 4/3.

PART IV - Sound

Voice Master

Covox sold the Voice Master and Voice Master junior. These would capture and record speech. Bundled software attempted recognition of commands, with limited success. (ANL 47, 44)

Parrot

The Parrot was a sound digitizer sold by Alpha Systems. Resembling a paddle, the device had phono jack for input. Antic provided plans for a similar project, called the Antic Sampling Processor. (ANT 8/8, 11)

SoundMouse

Among the more esoteric products ever released was the SoundMouse, which interpreted sound to provide a reading on a paddle register. It did not act as a digitizer, like the Voice Master and Parrot did. Bundled software made the lava lamp look mainstream in its appeal. No commercial applications taking advantage of this unique device were released.

Gumby

Chuck Steinman of DataQue created this set of plans for building stereo sound by installing a second Pokey chip (Pokey and Gumby, get it?). Once installed, the second channel has all

its addresses 16 bytes higher in memory ($D210 - $D21F). A small number of demos have been released in stereo.

available at the umich atari archive

POPS

Lee Brilliant, ANALOG's resident hardware guru, came up with this system for stereo sound, running it off the clock line on the SIO bus. As with Gumby, it requires customized software to use. (ANL ???)

MIDIMATE

MIDI stands for Musical Instrument Digital Interface. It is a system for computers to record, replay and control musical instruments. MIDIMATE, when combined with MidiTrack software, permits an Atari 8-bit to take control. Why buy an ST? (ANL 33:26)

SIO-2-MIDI Interface

This is a set of plans to make your own MIDI interface. Limited software is included.

available at the umich atari archive

MidiMax

There was also a midi interface made by Wizztronics, called the MidiMax. Unlike the MidiMate, it had not jacks for external sync, but it did have an additional SIO port so it could be chained. It contained the same optoisolators generally used in midi keyboards, and the case was riveted steel -- real rugged. It came with Lee Actor's MMS software, some sample songs, a program to convert AMS to MMS files, and a couple of six foot midi cables. Gary Levenberg wrote the manual for the software. In addition, Wizztronics sold a dozen or so double-sided disks of MMS songs that had been converted from AMS.

PART V - Disk Drives

Happy Computing

Atari users were notorious for their software piracy. The Happy Drive (originally for the 810, later for the 1050) contributed to that reputation. It was a modified 810, which could duplicate copy protected software. Thus began a war between crackers and software houses. It also included a full track buffer, which sped up operations and reduced the painful grinding sound of the 810 at work. The 1050 version also made the 1050 into a true double-density drive; version 7.0 would let the modified 1050 read and write 180k MS-DOS disks.

US Doubler

The Atari 1050 drive was brain-damaged from the very beginning. Rather than add a few dollars worth of parts to make a true double-density drive, Atari invented their own format, called "dual-density", which stored 130k on a disk. ICD produced the US Doubler, a hardware add-on that gave the 1050 true double-density. As an added bonus, it also included UltraSpeed, which made "the normal beep-beep of Pokey sound like staccato machine gun fire" according to one review. These drives, in order to use warp-speed, had to have disks formatted in a special "Ultra-speed" sector skew. Unlike the Happy which would buffer the whole track and warp it to the computer, the USDoubler had limited ram and relied on the sector to be accessible right when it needs to be read. Using a ultraskew disk in non-US

mode was REALLY SLOW :) A variant was produced which added 4 to the drive number, permitting drives to be addressed as D5:-D8:.

The Super Archiver

This was CSS's entry into the 1050 DD sweepstakes. It included a high-end crackers' toolbox, letting you edit sectors, create phantom sectors and other fun stuff.

The Bit Writer

Eventually, software companies came up with a new copy-protection technique: use 34 sector tracks and repeating sector numbers, so you get a "different" sector #7 depending on where the disk is when you ask for it. CSS to the cracker's rescue again! The Bit-Writer reads in tracks from the disk and stores the bit pattern. This can then be re-written. Ironically, the software disk that came with this upgrade to the Super Archiver was created on a non-Atari machine, so users couldn't copy it.

The XF551 Update

Atari's last disk drive for the 8-bit wasn't quite perfect. This replacement OS ROM from CSS fixed a number of bugs (can't switch back and forth between SD and DD properly), and sped up the drive. A warning on upgrading the XF551: The main PC board is lousy. It's REALLY easy to break traces - even unplugging SIO cables can do it. BE CAREFUL!

The XF Single and Dual Drive Upgrades.

CSS introduced these for the XF551. You could either replace the 360k mechanism with a 720k one, or add a 720k to the 360k. Software included let you read and write IBM disks.

Bob Woolley's 3 1/2" XF551 Upgrade

Once again, someone couldn't leave well enough alone, ripped apart Atari hardware, got bored with merely improving the OS ROM, and swapped out the 360k 5 1/4" mechanism for a 720k 3 1/2" one. This was sold by an outfit called Innovative Concepts.

512k ROMDisk

From Klaus Peters in Germany, this system provides a solid-state alternative to floppy and hard disks. Using up to 8 27512 EPROMs, this setup provides high-speed PBI access to commonly used software

Amdek 3" drive

Amdek released a new standard for disks: a rigid 3" plastic disk that could store a whopping 360k (but you'd have to flip the disk for that). It never caught on.

MIO

ICD manufactured this wonderboard in 1987. Connected to the PBI or ECI, it provided either 256k or 1Meg of RAM, an RS232 port, a parallel printer port and a SCSI hard drive port. The RAM can be configured as a RAMdisk or printer buffer, or via software as a hard disk cache. To connect it to a 130XE ECI required a special adapter that would convert the 130xe's cartridge/ECI to an 800XL compatible PBI. The little board had two cartridge slots (the rear of the two works for some cartrige types only, like Rtime 8) This looked better than having a tower of stackable cartriges coming out of your 800XL! (Spartados X, Rtime8, and Action all plugged on top of each other is rather obtrusive on an 800XL :)

MIO II

Currently under development by Fine Tooned Engineering, this PBI/ECI board will provide an interface and power supply for an IDE hard disk. It may also include extended memory support for CPU upgraded computers, as well as a parallel port.

Black Box

CSS manufactures the Black Box, a PBI/ECI device that offers an optional 64k printer buffer. Its main attractions are its m/l monitor, 19200 baud RS232 port, parallel port, and hard disk interface. The parallel and serial ports do not use standard DB9 or DB25 connectors; custom cables are required.

Floppy Board

This is an add-on to the Black Box, also from CSS. It permits standard floppy drives, 360k, 720k, 1.2M and 1.44M, to be attached to the Black Box. Since they are connected to the PBI, these drives operate extremely quickly. Software included lets you read and write to MS-DOS format disks.

Supra/KP Hard Disk Interface

Supra released one of the first hard drives for the 800xl. It hooked up via the PBI. KP bought the rights to the interface from Supra.

Corvus Hard Disk System

The earliest hard disk interface, the Corvus system hooked up to a 400/800 via joystick ports 3 and 4. A custom DOS would be booted from a floppy disk to permit the computer to access the hard disk, which was divided into 720 sector partitions.

IDE Hard Drive Interface v1.0

New from Poland, this promises to let your XL/XE take control of new IDE hard disks. Its design will permit future systems to break the 16 megabyte boundary.

mailto: CONRADUS@plearn.edu.pl

Bob Woolley's IDE Interface

Some guys are constantly hacking hardware. And then there's Bob. Memory upgrades? PBIs for 1200xls? 80 column devices? Battery-backed RAM operating system? Somewhere, after all those, he found the time to interface the xl/xe parallel bus with an IDE hard drive. Plans to be published in the next Atari Classics magazine.

German IDE Interface

And now there is a new IDE-Interface available from germany. ~DM 120, + shipping. Works fine with Mitsumi CD-ROMs. Get in contact with the developers:

stefan_birmanns@ac.cybercity.de
matz@kawo2.rwth-aachen.de

ATR-8000

SWP Computer Products made this original wonder-widget: Serial and parallel ports, standard floppy interface, optional hard disk interface and even CPM and MS-DOS add-ons.

Critical Connection

A long time ago, in a galaxy far, far away, was a mystic operating system known as CPM. A company named USS Enterprises produced the Critical Connection, a device to permit a CPM computer to emulate disk drives for the Atari. It was a cable, plus software for the CPM end of the system. The CPM system could also act as a printer buffer, and the CPM keyboard could be used in the place of the Atari keyboard. (ANL 39,103)

SIO2PC

With the demise of CPM and the rise of the IMI cartel (IBM-Microsoft-Intel) a new system similar to the Critical Connection arose. Nick Kennedy developed the SIO2PC hardware and software, which permits any PC with a serial port to act as up to four disk drives for an Atari. It can also act as a printer buffer.

APE

Stephen J. Tucker took SIO2PC one better and wrote new software. The Atari Peripheral Emulator (APE for short) lets your PC act as high-speed drives. It lets you print to your PC printer. And it lets you use your PC modem on the 8-bit. It also permits, with a special cable, the creation of backups of copy-protected disks.

available at the umich atari archive

PART VI - Other Neat Stuff

Zucchini

In ANL 59,60 and 62, Dr. Lee S. Brilliant provided plans and software to turn a surplus Atari into a printer buffer for another Atari. He called it "The Atari Zucchini".

The Printer Buffer Routine (PBR) and Disk Emulator Routine (DER) came from B.L. Enterprises. They were cartridges and cables which worked in a similar fashion to the Zucchini. The PBR provided a buffer, while the DER emulated a disk drive on the remote computer. Stock XLs gave 403 free sectors; a 130xe would give 914. (ANL 65, 67)

PIA2

With the use of PORTB for RAM banking, hackers were looking for more parallel outputs. This plan, for adding one more PIA chip, includes notes for adding two more. It was intended as a means to control large RAM upgrades. (AIM 3/2, 16)

WIMA Radio, Lima, Ohio

This radio station, when automating 6 broadcast hours daily, created a hardware and software package built around a 130xe for control. Control was via joystick ports and tone decoders. (ANT 8/7, 30)

Comp-U-Temp

This provided 8 or 16 channels and 2 or 4 sensors. It would monitor the temperature, with options to log results to disk or printer, or to sound an alarm if the temperature strayed out of set boundaries. The software was described as "cumbersome". (ANL 48, 35)

Atari Lab

During one of their periodic restructurings, Atari decided to sell their computers as educational. Thus, the Atari Lab series was produced. The two kits released provided experimenters with tools to measure light and temperature. Of course, the next restructuring left this an orphan product.

Turbo 816

Released by DataQue, this provided a replacement OS as well as a replacement for the 6502 CPU. A 65816 was substituted, providing new opcodes and a 24 bit address space (16Megs vs 64k with the 6502).

Sweet 16

Released by Fine Tooned Engineering, this provides a 65816 CPU to replace the 6502.

Bob Woolley's 65816 Upgrade

Notice one name popping up again and again? In AC 3/3, Bob began explaining how to add a 14 mHz 65816 to your xl. That's right, parallel processing. Complete plans were never published.

MicroNet

Supra provided the Atari community with its first networking product. MicroNet provides nine SIO connectors. Eight are for computers. The ninth goes to whatever peripherals are to be connected. The system served to isolate the computers electrically. It did no software checking, meaning that two or more users attempting to print or save at the same time could trash each others output. (ANL 51, 76)

MultiPlexer

CSS provided a better way to network. The Multiplexer system requires one host system which has all the disk drives and printers for the network. The slaves are connected via the cartridge port to the host, and all their disk and printer i/o is rerouted to the host. All the systems involved require their OS replaced with a special multiplexer OS. The only thing not shared by the network is the R: device, allowing the system to be used for running a multi-line BBS with BBS Express! Professional BBS software from K-Products, which is still actively supported. This was possible with a special version of 4.0, and is built into 5.0.

GameLink II

The most recent innovation in networking the 8-bit Atari, GameLink II permits up to 8 machines to share information for interactive games. Currently, only the Maze of Agdagon supports this system. DataQue sells cables and the game.

J-Net

Released to on-line services and possibly to the Umich archive as well, this set of programs was designed to interface computers by the joystick port, using 3 bi-directional data lines and two control lines.

Transkey

Even the most dedicated of Atari enthusiasts hates the xe keyboard, with its mushy feel. Michael St Pierre created an interface for a PC keyboard. Hook it in to your xl/xe, and

plug in your PC keyboard. It includes programmable macro keys and a number of other features. Be warned that the PC keyboard isn't mapped the same as the Atari; for example, on the Atari SHIFT-2 gives a ", while on the PC it gives a @. Available from Dataque.

B-Keys

This keyboard was a full stroke replacement for the Atari 400 membrane keyboard, but they were very low keys....the touch was OK, but not excellent. There were better keyboard replacements for the 400, but NONE of them fit as well, or looked as if they were part of the orginal Atari 400.

XE-Touch

The XE computers have arguably the worst keyboards ever made. To firm up the squishy keys, Best Electronics sells this set of silicone switches. It only works on one of the two xe keyboard models, though.

Freezer

Huge RAM upgrades are great, but when your system crashes you can say goodbye to all the info in your RAMdisk. Bob Woolley made this mod to add a hard reset, by fooling the system into thinking that a cart had been pulled out of the system. Your system reboots, but your RAMdisk contents are preserved.

R-Time 8

This is a clock cartridge for any Atari from Fine Tooned Engineering. It includes a pass-through connector so that any other cartridge can be plugged in as well. Though primarily intended for SpartaDos, software for other DOSes is included.

???? Clock Cartridge

Announced 'way back in Atari Classics 1/1, this product was intended as a replacement for the R-Time 8. Software difficulties have kept it from being released.

Mars-8

This is still under development from Fine Tooned Engineering. For 800xls only. Memory expansion of 256k, 1M or 4M. Install internally Action, Basic XL/XE, MAC/65, SpartaDos X, R-Time 8.

Atari 850

This device hooks into the SIO line, and provides 4 9-pin RS232 ports and a 15-pin parallel port. The RS232 ports are NOT IBM PC standard. The MIO and PR Connection use the same pinout.

P:R: Connection

This device plugs into the SIO line, and provides 2 9-pin RS232 ports and a 15-pin parallel port. It is powered by the SIO line. The Atari 1200xl requires an internal modification to work with this device, or with the Atari XM301 300 baud modem.

Siders' Serial Interface

With 850s and P:R: Connections becoming increasingly rare, Kenneth Siders released plans to build a high-speed serial interface using only 2 ICs.

Atari 1090XL Interface Box

Ever look in the back of an Apple II or an IBM PC, and envy the expansion cards? Atari was planning to release a similar expansion box. The full specs were written up, and prototypes were sent out to hardware developers. As usual, Atari took this great idea, buried it, and forgot about it. These are EXTREMELY rare; I've only ever seen two for sale. Definite collectors pieces.

MPP 1000 Modem

The joystick port is a parallel port. The SIO port is a serial port. So where would you hook up a serial modem? MPP (now Supra) plugged a 300 baud modem into the joystick port. Running at 300 baud, with software that couldn't d/l files longer than 32k (an Xmodem bug), this is what got me started in the on-line world, and what got Supra started in the modem business. Wonder if I could trade in my old 300AT for a new 33.6k?

Voice Box II

Manufactured by the ALIEN Group, this speech synthesizer even made it into TIME Magazine in their "Machine of the Year" issue in 1982. Plugging into the SIO line, this device would produce speech of the traditional computer variety.

R/128 RAMdisk Printer Buffer Spooler

Protronics of California announced this 128k RAMdisk/printer buffer which interfaced via the joystick ports, offering it as a replacement for the 850. A 512k upgrade was promised. (ANT 2/8, 106)

N1858-32

Newell Industries announced this 850 replacement in 1983. It offered two serial and one parallel port, along with an expandable 8k printer buffer. (ANT 2/8, 106)

Oscar Model 1

This bar-code scanner was from the Databar Corp. The intent was to permit the speedy entry of computer programs which would be encoded in magazines. (ANT 2/8, 107)

1200XL PBI

Hackers love the 1200xl for two reasons: because of all the space available within the case, and because of the great keyboard. Bob Woolley came up with this set of plans for adding a parallel bus interface to the 1200xl.

available at the umich atari archive

Arm Your Atari

ANALOG magazine provided this unique information on interfacing an 8-bit to a Radio Shack Armatron remote controlled arm. Positioning was determined using the paddle/potentiometers, and control was via the PIA (joystick pins).

155. [ANN] 6502 reloc. binaries & assembler

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-06 00:00:00 UTC
From: fachat@physik.tu-chemnitz.de
Message-ID: <5aqou8$t3h@narses.hrz.tu-chemnitz.de>
Source record: 77180
Cross-posted to: comp.sys.cbm,comp.emulators.cbm,comp.sys.atari.8bit,comp.sys.apple2.programmer,comp.arch.embedded

```
relocatable binary file format o65
& 6502 cross assembler xa65

This is the announcement for the 6502 relocatable binary file format 'o65'.

This format allows to

- relocate (i.e. move to a different address) a file when loading it, to
be able to execute at a different address

- produce global label lists, i.e. being able to export labels from one
file to another

- have undefined references, i.e. allow late binding (resolving symbols
at load time)

- code sharing in virtual memory architectures

- do block oriented transfer and have minimum side storage when loading a file

The format works for the 6502 and for the 65816 CPU. It knows object from
executable files and more.
The file format itself is free (I can do the clearance, if you have
suggestions for extensions etc.)
Have a look at: http://www.tu-chemnitz.de/~fachat/c64/xa/fileformat.txt

About another 6502 file format, see note 1).

6502 cross assembler xa65

As reference assembler to produce this kind of code, I have implemented
the file format in my 6502 cross assembler "xa65".
From version 2.1.1 it supports the new file format standard, and from
version 2.1.2a (i.e. current), it comes with the "file65", "reloc65" and
"ld65" utilities to print information about a file, relocate a file
and link several object files together resp.
The all programs are close to production stage (you never know if you
got all bugs...), while the linker is in beta stage. Esp. I want to know
about options you would like to have.

The assembler is under GNU public license and can be found at:
http://www.tu-chemnitz.de/~fachat/c64/xa/index.html

Other changes from earlier versions:

- supports o65 file format, including linker, relocator and file utility.
```

```
- much better code quality (only two warnings with
gcc -W -Wall -pedantic -ansi)

- supports more MASM pseudo opcodes (but still not the important ones
that I have my C-like preprocessor for: .if, .macro, .include.
This might change someday...

General description:

- C-like Preprocessor to make macros
- label "hiding" on different levels,
i.e. multiple use of the same label possible
- 1.5-pass assembler:
Everything that can be derefenced is being assembled in pass 1 and
saved in memory. The second pass does the rest. This (together
with hashing etc) gives quite a good speed (30kByte binary out of
300kByte source in less than two minutes on an 8MHz Atari ST -
hey, the first versions would have taken half an hour for this
job! - my 486DX4/100 with linux needs around two seconds or so...)
- needs no linker - all stuff is in source code (with this speed,
it's ok)
- (optional) support for relocatable 'o65' file format,
including linker, relocator and file utility. A loader in 6502
assembly code is also included.
- reads DOS and Unix(tm) files (LF or CR+LF)
```

so long
Andr&#65533; Fachat

```
----
1) There is already another relocatable object file format, called "OMF",
which is mostly used in the Apple community. I didn't take this format
for my projects for several reasons: It has some limits on filename
lengths; the relocation information is encoded between assembler code,
i.e. one cannot easily use block loading; it doesn't provide different
segments (as I can see) that have this meaning.
The OMF file format has never been published on the internet and mostly
commercial companies from the Apple world seem to support it - but then
they even have C compilers for this file format.
```

A. P. E. and SIO2PC seem to work, but a direct connection may be
impossible. The H-P Deskjets use bidirectional cables, but I don't think
they have to. When I got my Logitech PageScan, which has a
parallel-pass-through, it said something about changing the H-P drivers to
unidirectional if there was a conflict between the scanner and the
printer.

I know that the specs and commands for the Deskjets are available at H-P's
website, so if you get as far as getting the printer to work with simple
Epson commands, you might want to construct a printer driver for it.

BTW, even with A.P.E. and SIO2PC, when something gets sent to the printer
(mine is a 660C,) you have to press the top button (the yellow light will
be flashing) to get the page started.

This should only happen if you send less than a full page to it. You can
send a form feed to it (ASCII character 12) to force the page to feed.

> _
As I recall, the downside to the XLboss is that it removed the PBI handlers. So, no MIO, BB or KP interface with it installed.

You could try connecting it to a TV and see if you get a picture
there. If you do then the monitor output has failed somewhere.
Other than that, you could try replacing some of the major chips
inside, altho these are usually soldered in and very hard to replace,
and WHERE to FIND the replacement chips? Not much help I know, but
there it is. Your best bet would probably be to get another computer,
which here in the newsgroups I'm sure you'll find someone willing to
sell.

Here's a couple of ATR IMAGE utilities for you to try out. I haven't
had much use for them myself, as I have a real ATARI and SIO2PC to
play with :)
If you have any trouble UUDECODEing the attachment, please let me know
and I'll re-send it in MIME.
I've included a front end loader, called XFSIO,which will launch XLit
or XFormer with all the required parameters and disk images. The ATR
utilities are called IMAGEMAN, and ATARIMG. Good luck with these, and
please let me know how you go....

Steve.

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 01/01/97

NOTE: There are currently 1375 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 5.00 Basic -- for use with the Atari 400 and 800
$ 9.50 Delta Drawing (Spinnaker)
$ 5.00 Missile Command
$ 5.00 Space Invaders
$ 5.00 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$39.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 5.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$14.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$19.00

*****

To reserve any item(s) listed here, please contact me (please read
the SALES CONDITIONS section first). Thank you!

164. XL-it!?!?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-06 00:00:00 UTC
From: Matty <moses@cybercomm.net>
Message-ID: <32D1D63B.5BA4@cybercomm.net>
Source record: 77189

I know this question has been asked before so one more time won't hurt... I can't seem to get the sound to work with XL-it (.16). I'm using a SB-16. I've tried everything I can think of and was wondering if someone who has a SB-16 and working sound (with XL-it) could post the contents of their autoexec. Thanks...

matt raupp

>(per process,I assume)

The PDP-11 was a 16-bit machine and had a 16-bit address space, period.
That's why it had a 64K barrier.

Actually, I believe that the PDP-11 differentiated between code and data
addressing, so you got 64K of each. And swapping allowed the use of more
memory, etc., etc. But the basic limitation there was the 16-bit
addressing designed into the machine.

I know this was a hoary old message from before the dawn of time, but I
can't resist...

In article <58v84l$m77@login.freenet.columbus.oh.us>,
dklugh@freenet.columbus.oh.us (Daniel Klugh) wrote:

>Aren't Macs just "school" computers?Much in the same way that Pascal is.

Nope.

>I remember seeing one in a store once.I remember vaguely that you had to
>manipulate little B&W pictures to do things.I about laughed out loud.
>(B&W like a newspaper,not a TV)

That was then. The now, for me, is a 150 MHz PowerPC 604, gobs-o-ram, 17"
color monitor, etc. It's fast enough that Rainbow emulates the Atari
8-bitters at full-speed, 60fps. You did know that the Mac II came out way
back in 1987, ending the era of Macs being B&W only, didn't you? :)

>Like a pictures of a sliding control to adjust volume or something.
>I think Atari with MyDOS is a easy-to-use interface.

I think you are in the minority. :)

>(if only DUP.SYS didnt re-load after loading every little binary file!)
>The PC has a better interface than Mac.

You have got to be joking. Even to a hardened CLI user, DOS is painful.
It's like using UNIX with everything useful and good cut out.

>Also,you have to BOOT handlers.You can't just load your RS232 handler
>when/if you happen to want to call a BBS.Of course this isn't a
>problem,since there is NO RS232 handler!!!

There are RS232 drivers in the PC BIOS. Granted, they don't support more
than 19.2K...

>And the PC doesn't have P/M graphics.Nor a text winodw in graphics mode.

You hardly need them in this day and age.

>(that's why lots of games use 40col text.Because they can't use a text window,
> and switching to 640x200 would be out of the question,they have to
> bit-map the text on to the 320x200 screen.Hence,40columns!)

Lots of games run at 640x480 now that there are sufficient CPU cycles to
update that much at a reasonable frame rate...

>Oh yeah,the incredibly HUGE slack!!!
>Waffle keeps each and every message in a seperate file.But on
>MS-DOS,sectors are huge.My HD had 8k sectors.A 512+MB drive would have 16k
>sectors.A gigabyte drive would have 32k sectors!!!
>(every time you double the size,double the sector-size.MS-DOS can only
>have 65536 sectors("allocation units",really))
>So my few megabytes of messages took up 20MB!
>Oh,and you can't really un-delete files!
>Well,enough PC bashing for now.

Atari's solution is to not allow large partitions, which IMO is undesirable too.

But someone who does know about this >stuff can probably see what I'm getting at and tell us exactly why it's a >load of bull.

I would make one modification to the above scenario: you can integrate the 6502 right into the "big chip". No need to make it external, as that wastes pins. On modern process technologies, every last bit of the digital circuitry in the 800XL could fit into a single chip. (Apple once embedded a pair of 10 MHz 6502 processor cores into an ASIC for the Mac IIFX; their job was to act as I/O controllers...)

However, people who want to build hacker type projects typically don't bother with all the baggage of an entire late-70's era personal computer. You can build single-chip computers with common 8-bit microcontrollers.

For instance, the one I've used, the Motorola 68HC11, is somewhat related to the 6502, but has a more powerful instruction set (multiply and divide!). It has built-in I/O pins, A/D conversion, serial ports, timers, a few hundred bytes of RAM, and 500-8000 bytes of some form of ROM (EEPROM, EPROM, OTP ROM, or mask programmed ROM). You can program the thing in a wide variety of languages (I use a C compiler, with inline assembly), and bootstrap it by connecting it to a PC with a serial port running a program Motorola supplies. Some variants have a complete built-in machine language monitor program (BUFFALO).

In one of my project courses in school last year, I built a maze-navigating robot with the HC11. Other than the HC11 itself, I had a 32K NVRAM (compiled programs get too large for the on-chip EEPROM), some glue logic to interface it, motor drivers, and sensor drivers.

For really simple things, like that lie detector, you can get a prebuilt board called the BASIC Stamp. It is powered off a single 9V battery, and has a PIC microcontroller with BASIC in a ROM and enough program space for something on the order of 100 BASIC instructions. It interfaces to a PC via serial. The BASIC is a simplified BASIC with extra commands to do common controller operations, like generating PWM signals. One side of the board is perfboard, so you can wire up your own circuits.

It is a funny thing... back in junior high school I had great dreams of making a robot that had an 800XL on board for the smarts. :)

>An Atari 800 or 5200 made like this would rock.

Unfortunately, there are some problems.

The 2600 didn't have any custom chips. It was built entirely from
standard parts. And it had no operating system ROM. Reverse engineering
it was a matter of looking inside to see which chips were there, and
looking at the development docs so you'd know what the memory map looked
like. This is perhaps an oversimplification, but it is essentially true.

The 800 series has several custom ICs. To do the same job, one would have
to recreate the functionality of each from scratch, since I doubt the
original engineering documents describing the circuitry still exist. (The
other possibility is to take photomicrographs of the surface of each chip,
and work from there... ugh!) Even if the documents did exist, a
substantial amount of work would likely be needed to convert it all from
NMOS or PMOS to CMOS.

In other words, the required engineering effort would be substantially
more than what was required to shrink a 2600, for a product that likely
would not sell as well as the shrunk 2600.

From: Chris Dunlop <dunlopc@mail.dec.com>
Message-ID: <01bbfc1c$5345fc80$ec589a10@vrml.cth.dec.com>
Source record: 77198

I was wondering if there is an easy way to trasfer the image files back to an ATARI drive, either using a SIO2PC cable and APE, or directly using the IBMs drive.

As an asside, are there any Indus GT users who would know why all disks would report a G5 error on bootup (and boot error scrolls onscreen, but no POKEY beeps). The previous owner of the drive beat it up pretty bad, and I'm not sure if it is alignment or not. If the drive is hopeless, does anyone have an Indus drive for sale?

Thanks,
Chris

After all the mention of what ends up lost and/or thrown away, I thought I'd share this bit from Toad Computers' homepage (in case some of you hadn't seen it yet):

"While dumpster diving at Atari in March 1996, we found the original developer documentation to the Panther, complete with technical specifications, schematics, and source code to 'Panther Pong.'"

This is at http://www.ataricentral.com:80/jaguar/

Granted, the Panther was a never-released system, but I'm sure many people on here (myself included) would love to have a copy of what was found in that dumpster.

It distresses me sometimes to think of what has been thrown away by various companies and dealers.

I guess you are using NETSCAPE or some WEB browser? The best way is to
get an FTP program- WSFTP or CUTEFTP seem to be the best around. With
these the filenames come up like in WINDOWS FILE MANAGER, and you can
hold control down and select whatever files u want. Besides, Yogi's
FTP site server only allows 5 anonymous login's, so you would
DEFINATELY be better off using one. See, the problem using NETSCAPE is
when you select to change directorys or download files, the server
see's this as another LOGIN and promptly says to any other user ACCESS
DENIED after 5 attempts. Anyway, I guess you need some pointers to FTP
so here they are:

http://www.cuteftp.com

http://www.ipswitch.com/pd_wsftp.html

Have fun....

There's lots of links around, check out my home page for some info.
Some quik links off the top of my head...

www.hackerz.com

go to their ATARI RETRO SITE.

http://nimitz.mcs.kent.edu/~clisowsk/8bit.html

lots of info here, I built my SIO2PC cable from a schematic found
here. It mentions that a diode is needed if you want access to real
disk drives, but I omited the diode and still can access everything.
This may differ for you, so see how you go......

>or was the "6" for the directory??? i do not know... ,-)
>maybe you must reconfigure your dos...
>

Yes it is "6" for the DIR, "4" is the "open file for read", and "8" is
"open file for write" commands. Just for interests sake- "9" is "open
file for write/append", and "12" is "open file for read/write".
Hmmm seems wierd that the command OPEN#1,6,0,"D2:*.*" doesn't work,
maybe the DOS is only set for a single drive, or the device #1 is
already in use by something else. You could try using OPEN#2 etc etc
to see if it is the DEVICE #1 in use. I would suggest using another
DOS that is known to access D2 to load TurboBasic. But, just in case,
I'll boot up my old faithful 130xe and try the command myself.

That works great on the 8k carts like Assembler/Editor, but it will not get the 16k carts or any Supercarts (Basic XL, Mac/65, etc.) you might have. I have a cartcopy utility around here somewhere that is in ML, if you like I can Fmail it to you.

From: crozier@rpi.edu
Message-ID: <5asob2$b24@usenet.rpi.edu>
Source record: 77132

Hello All,
I recently dusted off my old 130XE looking for something to drive
my HO train layout. I have been poking around the 'net looking for
information on the ECI and related hardware. I have found some
including the tech manual (but thats mostly software), various
FAQS, and even the 1090XL specs (which were quite helpful).
But I would really like a set of schematics and related information
like memory maps, timing and the like.

I noticed from the 1090XL spec that there is some memory free
in the D100-D1FF area (among others) could I connect the
latches I need to this address and get what I want or do I have
to worry about the whole PBI spec and interfacing.

I really just want maybe 20 bytes that I can connect to latches
outside the computer. Thoughts?
Thanks
Kevin

A little movie trivia: You can see a IIc with an LCD screen in the movie
"2010"--it's the scene near the beginning where Dr. Heywood Floyd (played
by Roy Scheider) is working at the beach. It's only shown from the side,
maybe to hide the fact that he's using 25-year-old hardware. All in all,
one of the sillier product placements ever made in a movie, considering
how quickly computers change. (Maybe it's supposed to be some kind of
retro thing. After all, look at this news group.;-)

If you use an updated FTP client, then you get both of these if the
server supports it, which is a pretty good chance. (I use NCFTP under
Win95, OS/2, and Linux)

From: ericcron@wwa.com
Message-ID: <5ash5o$2s2@kirin.wwa.com>
Source record: 77202

Geez, I wish I knew it was so stinking easy to copy cartridges.
Everything I read made it sound so hard.

While browsing through some unlabled disk I got in trade, I came across a BASIC program called cartcopy. Luckily, I had my 800 laying around. I have succesfully copied the Atari Assembler Editor cartridge that I just purchased new from B&C. Why wasn't this available on disk already? (If it already is available, pay no attention to the idiot behind the curtain, or the monitor, he he :))

I looked on the archive, but I did not see it. This BASIC program works very well, and it only takes about ten seconds, two times out of two it has worked wonderfully! Yeah, I had to stick a pencil in my 800 so that I could keep the lid open and insert a cart into the right slot, but thats a small price to pay.

I think I will copy all of my carts now, I am always so worried about trashing them while inserting (you know how they get stubborn sometimes!)

If anybody else has had problems copying carts and would like this neat little utility, just send mail to:

Eric_Cron@addus.com

Don't use the wwa.com, I rarely have time to read it.

Eric

> because they're 3-D...

I got it for X-Mas (Tomb Raider)... It's actually more like an explore the virtual world type game. No QUAKE killer/blood/mayhem here. =)

If you like exploring and atmosphere then Tomb Raider rocks. (I love the game).

BTW: Somehow I doubt there will be an Atari 8-Bit version anytime soon! ;)

way
> back in 1987, ending the era of Macs being B&W only, didn't you? :)

Could you possibly do me a favour?

Take a screen shot of the MacOS's menubar and menus (the Finders that
is)... and possibly open the system folder and screen shot all the Icons
you can find? and possibly send me the system sounds as well?

Thanx in advance... If you want to know why I want all this e-mail me! =)

I sort of prefer BASIC, but something like BASIC XE (with
enhancements). add a firmware switch for MAC/65 and Action!. Modify the
MAC to MADEM (Macro Assembler Debugger Editor Monitor). Have an
upgraded internal version of SpartaDOS X that supports ANSI, TCP/IP,
MS-DOS file format. Add a parallel floppy and ZIP drive and you've got
my dream 8-bit.
I like the one chip idea. Hmmm... While we're at it. Add 2 real
115Kbps uarts for 2 real serial ports and a real centronics parallel
port. Yeah... That's it!

Reader-suggested topics, unwritten as yet: (volunteers?!)
How fast of a modem can my Atari display keep up with?
-with Ultraspeed roms?
-with XEP-80
-with any particular terminal program

What is the XEP 80?

What programming languages are available for the Atari?

What kinds of monitors can I use with my Atari?
-Color Composite with separate chroma\luminance
-Commodore 1702
-Commodore 1084/1084s(stereo)
-can be used with ST or Amiga _and_ 8-bit
-monitor cable requirements
-400/600XL lack monitor port entirely
-800XL lacks separate chroma/lumi (can be added) as 800/XE
-XEGS totally different plug (RCA jacks) lacks chroma\lumi
-XEP80 has composite monochrome

Video Upgrades
-Adding chroma\lumi to 800XL
-Super Video Upgrades
-800XL
-130XE
-1200XL
How can I make my commercial boot disk (tape, cart)
into a load file or disk image?

What is APE?

Why does some European software (especially demos) flicker?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE XE Game System

It was 1979 when Atari, Inc. entered the home computer market with the
introduction of the 800 and the 400 computer systems. (The 400/800 models
were first shown publicly in November 1978). These MOS Technology
6502-based systems run at a clock speed of 1.79 MHz, offering 256 colors
displayable simultaneously, up to 320x192 graphics resolution and up to 40x24
text resolution in 11 graphics modes and 5 text modes. Video may be displayed
either on a composite video monitor in the case of the 800, or on a

standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The introduction of the 1200XL in 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 14K Operating System offers many new features, including an alternate International Character Set.

In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface, providing direct memory access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus a few special new graphics capabilities. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface, continuing the powerful feature of direct memory access.

In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.
...
On July 31, 1996, Atari Corp. (http://www.atari.com/) became a division of JTS Corp. (AMEX:JTS). In the short term, Atari is to continue supporting their Jaguar 64-bit home game console as a division of JTS.

Founded in 1994, JTS Corporation develops and manufactures hard disk drives for the computer industry. JTS has recently introduced its new 3  Nordic product for the portable computer market. Headquartered in San Jose,

California, with manufacturing facilities in Madras, India, JTS employs 1,300 people worldwide.

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer, ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer...

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product. The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his computer platform was developed years before the PC or Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a viable alternative in today's home computer marketplace.

Subject: 1.3) What are the performance specifications of the 8-bit Atari?

Some of this section by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick).

Clock Speed:
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

Graphics:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text
2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen modes are available.
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:
60 times per second (Hz) on NTSC Ataris

49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.
All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

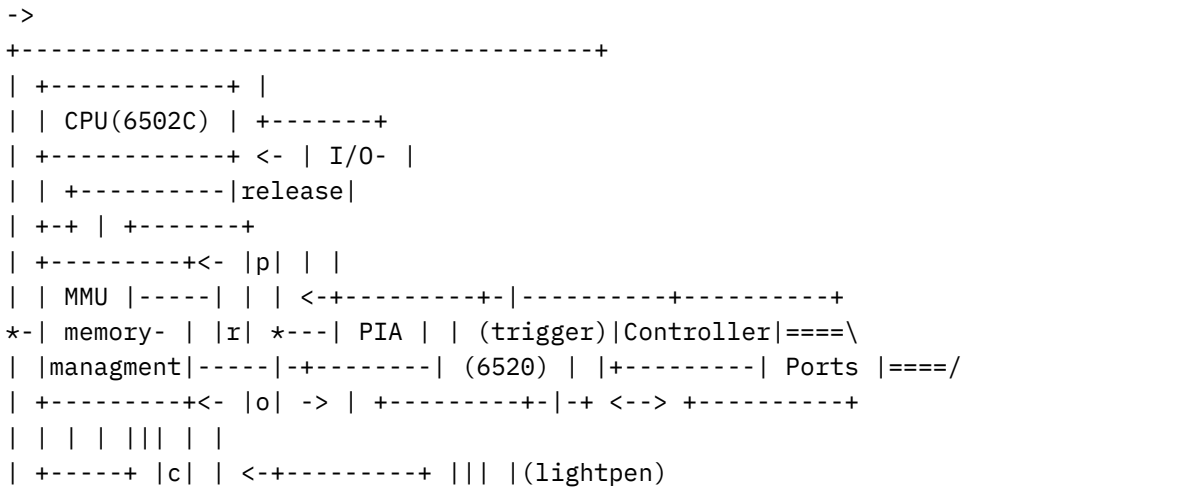
Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

Subject: 1.4) What is the internal layout of the 8-bit Atari?

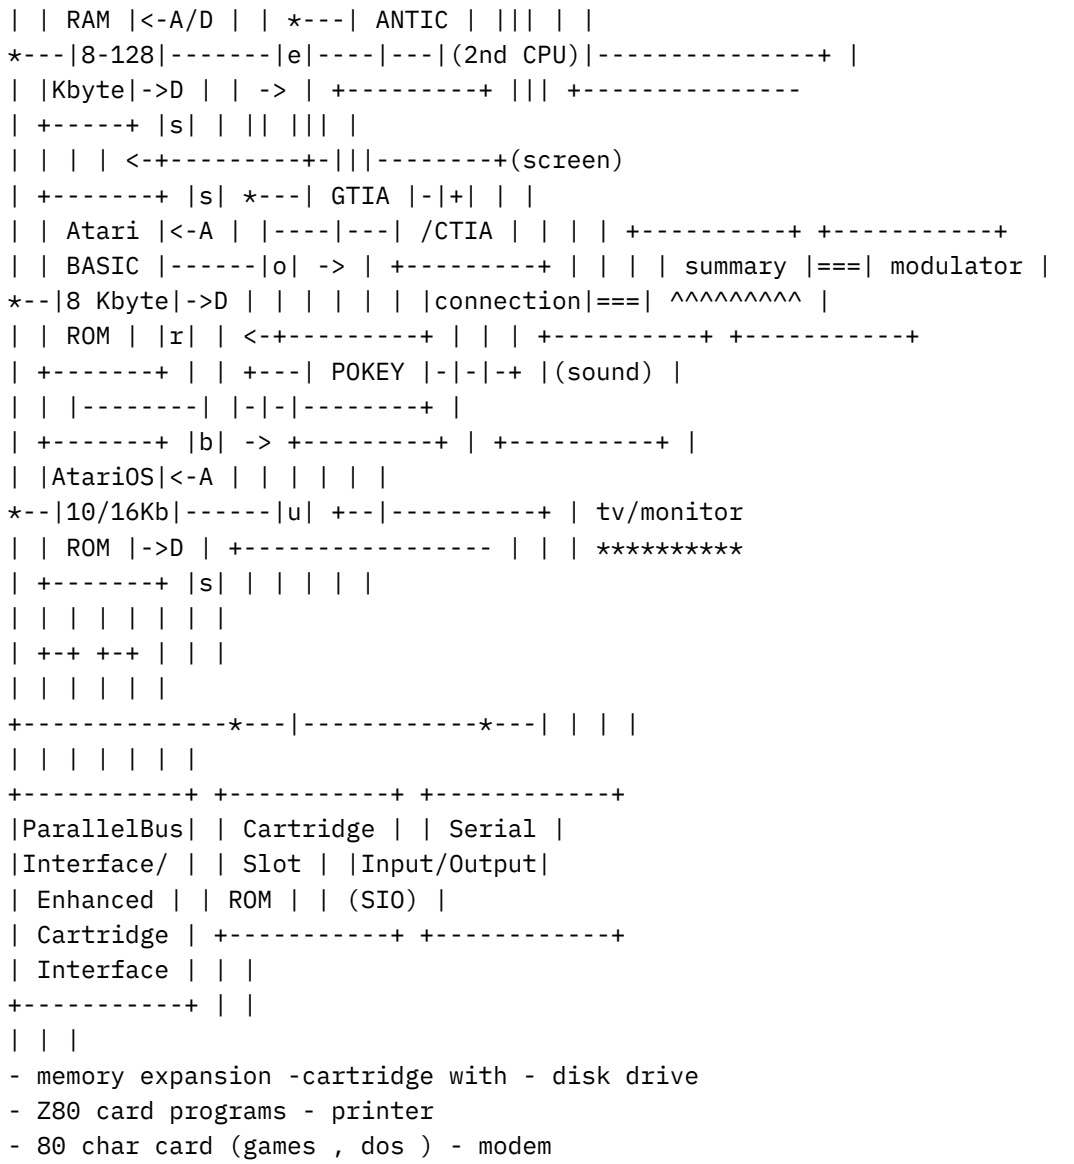
The following text was written by Chris Crawford and appears in De Re
Atari (Atari#APX-90008), a book published and copyright by Atari, Inc.,
1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different
from other systems. It of course has a microprocessor (a 6502), RAM,
ROM, and a (PIA). However, it also has three special-purpose (LSI) chips
known as ANTIC, GTIA, and POKEY. These chips were designed by Atari
engineers primarily to take much of the burden of housekeeping off of the
6502, thereby freeing the 6502 to concentrate on computations. While
they were at it, they designed a great deal of power into these chips.
Each of these chips is almost as big (in terms of silicon area) as a
6502, so the three of them together provide a tremendous amount of
power. Mastering the Atari 8-bit computers is primarily a matter of
mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor
dedicated to the television display. It is a true microprocessor; it has an
instruction set, a program (called the display list), and data. The display
list and the display data are written into RAM by the 6502. ANTIC retrieves
this information from RAM using direct memory access (DMA). It processes the
higher level instructions in the display list and translates these instructions
into a real-time stream of simple instructions to GTIA.



GTIA is a television interface chip. ANTIC directly controls most
of GTIA's operations, but the 6502 can be programmed to intercede and
control some or all of GTIA's functions. GTIA converts the digital
commands from ANTIC (or the 6502) into the signal that goes to the
television. GTIA also adds some factors of its own, such as color
values, player-missle graphics, and collision detection.



POKEY is a digital input/output (I/O) chip. It handles such
disparate tasks as the serial I/O bus, audio generation, keyboard scan,
and random number generation. It also digitizes the resistive paddle
inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful
separation of their functions in the design phase has minimized conflicts
between the chips. The only hardware level conflict between any two
chips in the system occurs when ANTIC needs to use the address and data
buses to fetch its display information. To do this, it halts the 6502
and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address
multiplexer. According to mailto:sup8pdct@closer.brisnet.org.au (James
Bradford), "Freddy is a type of memory controller. It takes the address and
clock from the CPU and multiplexes it with the appropriate timings and signals
to use DYNAMIC memory. Freddy also buffers the system clock crystal and
divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't
have the extended RAM. Even if it did, you would still need the chip that
does the REAL bank switching. It is a small 16-pin chip (Atari/Best
Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy,
the bank select bits from PIA, A14, A15 and the 6502 halt signal to control
which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the
address range of the extra memory bank (or normal address range with no bank
switching). The ANTIC/6502 select bits in combination with the 6502 halt
line, control the switching of the PIA bank number bits to A14/A15 and which
bank of memory RAS goes to. Why people say freddy does the bank switching is
beyond me. An 800XL can look like a 130XE with that 16-pin chip installed
(That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement (With thanks to mailto:peter@soemtron.sb.sub.de (Peter))

- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800:8/16/48K, 1200XL/800XL/65XE/XEGS:64K, 600XL:16K, 130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

According to Doug Neubauer (by way of mailto:finneganj@delphi.com (James Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)

Joe Decuir - Antic and system and creator
???A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

According to mailto:jjessop@ix3.ix.netcom.com (Jerry Jessop), the original
400/800 OS programmers were:

Larry Kaplan
David Crane
Bob Whitehead
Al Miller

Sybject: 1.5) What replacements/upgrades have been created for the Atari OS?

Taken from The Atari 8-bit Hardware Upgrade,Modification and Add-On FAQ,
which was created by David A. Paterson, mailto:davepat@total.net

8-Bit Atari Operating Systems

The original 400/800 had a 10k ROM OS. There was nothing in memory
from $C000-CFFF. The later xl/xe models all had 16k OSes. As an added
bonus, the xl/xe OS was in a 28 pin ROM that was pin compatible with a 27128
EPROM. What does this mean to the layman? With a little knowledge of 6502
assembly and an EPROM burner, you can write your own operating system (or at
least change Atari's).

Operating System upgrades

UltraSpeed + OS : from CSS. Supports high speed disk communication. Drives
1 through 9. Any RAM upgrade. Includes three modes: standard XL/XE OS;
400/800 OS; UltraSpeed+ OS. For XL/XE systems.

Omnimon: from Newell. M/l monitor for 400/800. Installs into $C000 bank of
memory, otherwise unused.

RAMROD OS: from Newell. Replacement for 400/800. Includes accelerated
floating point math package.

RAMROD XL: from Newell. OS speed-up routines, fast math, and Omnimon.
Includes option for second OS.

Omniview: from Newell. Adds 80 column display, using Graphics 8 3-bit wide
characters. Add-on for RAMROD boards, 400/800 and xl/xe versions.

XL Boss: from Allen Macroware. OS replacement for XL model computers. Includes m/l monitor. 400/800 OS compatible.

TurBoss: available from KP and Best. Fast math and fast screen routines. For XL/XE computers.

Turbo 816: Chuck Steinman at Dataque released a modified OS that used the 16 bit capability of the 65816 CPU upgrade he sold. For XL/XE computers.

SmartOS: This is a hardware upgrade that installs a battery-backed RAM chip into your XL/XE. This lets you fool around with changing the OS and not have to burn new EPROMs constantly. Presented in Atari Classics 4/3.

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at mailto:emulators-request@qualcomm.com .

Subject: 2.7) Where can I post Atari binaries?

If you really want to post uuencoded atari binaries to News, you can use

news:alt.binaries.atari

The discussion forum for that group is news:alt.binaries.atari.d

There is also a less-distributed newsgroup news:alt.binaries.comp.atari8bit

---

Subject: 3.1) What is INFO-ATARI8?

INFO-ATARI8 is the e-mail discussion list which is made up of the postings to the comp.sys.atari.8bit Usenet newsgroup.

To subscribe to INFO-ATARI8, send a message to:

mailto:listserv@vm.marist.edu

that says:

subscribe info-atari8

All postings to comp.sys.atari.8bit will appear on the INFO-ATARI8 list.

To contribute to discussion threads in the comp.sys.atari.8bit/INFO-ATARI8 group by e-mail, send your posting to directly to comp.sys.atari.8bit via an e-mail->Usenet gatway. For example:

mailto:comp.sys.atari.8bit@pubnews.demon.co.uk

Any posting sent to info-atari8@vm.marist.edu will not reach comp.sys.atari.8bit, so don't send your postings there.

Contributions sent to this list are automatically archived. You can get a list of the available archive files by sending an "INDEX INFO-ATARI8" command to LISTSERV@VM.MARIST.EDU. You can then order these files with a "GET INFO-ATARI8 LOGxxxx" command, or using LISTSERV's database search facilities. Send an "INFO DATABASE" command for more information on the latter.

INFO-ATARI8 is moderated by mailto:snyder10@MAILHOST.TCS.TULANE.EDU (Mike Todd)

INFO-ATARI8 was created on December 9, 1986.

Subject: 3.2) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.3) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin. (1995/08/28 edition)

Mail the text of your post to:

group.name@pubnews.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name@magus.dgsys.com (unverified)
group.name.usenet@hkucs92.air.org (unverified)

For example, to post to comp.sys.atari.8bit, you might send your
message to:

comp.sys.atari.8bit@pubnews.demon.co.uk

Be sure to include an appropriate Subject: line, and include your real
name and e-mail address at the close of your note.

Subject: 3.4) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com
(Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to
mailto:listserv@info.cern.ch (older address) containing
the following single line. (What you put on the subject line doesn't
matter; blank is OK. This line should go in the text of the message.)
You will receive as a reply a simple page intended to help you learn
more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Bill Kendrick, mailto:kendrick@zippy.sonoma.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bi
t

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts
usually don't arrive in the proper sequence. Also, please include a
message labeled "file transmission," containing a short description of
the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is
maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to
have seen no uploads for years, but there are some files here that aren't
on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no
(Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software
Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate
directory. Please include a readme file with each upload, so people know
what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson,
mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only) on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 4.7) What is the Slovakian Archive?

This FTP site contains some demos, games, utils, zines from all the world. Here you can also find some Slovak or Czech stuff.

Contact: mailto:mchorvat@econ.umb.sk (Marco, of GMG)

ftp://svs.scsss.sk/pub/atari/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National Public Telecomputing Network. It can be accessed by any of the following: telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are automatically members of the official Atari user group C.A.I.N. - Central Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari Community E-Mail Directory" listing. Send correspondence and press releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.3) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.4) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.5) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

http://www.ogopogo.com/blackat/8bit/

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed

anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:76702.1076@compuserve.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load
files. Like .xmo, use of .bin is discouraged.

Subject: 10.1) What 8-bit Atari emulators exist for other computing
platforms?

The following software packages each allow you to run software written for the
8-bit Atari on other computers, to various degrees of success.

1) ST Xformer 3.0, from Emulators Inc, for the Atari ST.
mailto:emulators@msn.com
http://www.emulators.com/

2) PC Xformer 3.5, from Emulators Inc, for MS-Windows.
mailto:emulators@msn.com
http://www.emulators.com/

3) Rainbow 1.3, by Chris Lam, for MacOS/Windows 95/NT
mailto:jx91@cityscape.co.uk
http://www.cityscape.co.uk/users/jx91/rainbow.html

4) Atari800 Emulator for Unix, Amiga and MS-DOS 0.6.0, by David Firth
mailto:david@signus.demon.co.uk
http://www.signus.demon.co.uk/david/atari/atari.html

5) XL-it! 0.16, by Markus Gietzen, for MS-DOS
mailto:iig05-1@htw.uni-sb.de
http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

6) Pokey 0.62 by Mike Hill, for MS-DOS
mailto:mhill@one.net
http://w3.one.net/~mhill/pokey/pokey.html

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes

Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.71 XE (128K) or 1.1 (48K) by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.7 XE) or No (1.1)

Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
available from mailto:brucka@eruvin.jct.ac.il

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz, mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050 drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be used to read/write to a hard drive connected to an MS-DOS system. This can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the companion vendor/developer list) allow the Atari XF551 disk drive to read 720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software Services (see the companion vendor/developer list), allows both low density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard floppy drives to be used on the Atari. A utility is included to read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

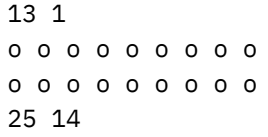
A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into



the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed but also pins 4 and 5 as well as 6 and 8. Or better yet, make a true 25 wire, straight through cable and use a commercial null modem. A commercial null modem is just a small device with the correct lines already crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

==> Indus GT
SS SD/ED/DD Synchromesh mode usable with SpartaDOS X and
DOSXL only.

==> Astra Double-D?
SS/DS SD/DD? standard /LEDs and such

==> Rana 1000
SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.

ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 67000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38400 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.

Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades (CSS)
- Floppy Board (CSS)
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need to obtain one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Rare.
Fast but still relatively slow I/O, kludge through joystick ports for 800.

==> KPI Hard Disk Drive Interface (formerly Supra)
from K-Products (bobkla19@mail.tcd.net - Bob Klaas)
Some limitations on drive type and size and total number of drives in sys.

==> Multi I/O (MIO) (formerly from ICD)
from Fine Tooned Engineering (FTe) (ftooned@crl.com - Mike Hohman)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Black Box
from Computer Software Services (CSS) (76702.1076@compuserve.com - Bob Puff)
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface
from Konrad M. Kokoszkiewicz and Jacek Zuk
(see http://www.orient.uw.edu.pl/~conradus/docs/ide_eng.html)
o Maximum drive capacity: 16777215 physical blocks on each device.
o Maximum number of partitions: 16
o Maximum capacity of a partition: 16777215 logical sectors
o Logical sector length: 256 or 512 bytes
o Average speed (in kilobytes per second, WDC 130AB drive):
- Native mode, sequence of sectors (R): 75
- Emulation mode, sequence of sectors (R): 43
- Emulation mode, back sequence (R): 28
- Emulation mode, random sectors (R): 13
- Emulation mode, same sector (R): 29
- Emulation mode, DOS file (W): 7
- Emulation mode, DOS file (R): 36
o Booting from any partition (on the standard XL OS)
o Write protection capability
o 8 jumpers to set the device number for the operating system
o Sweet 16 compatibility

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) What is SIO2PC?

Original text by Dave Paterson, mailto:davepat@total.net

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC
printer or to a file on the PC. High speed drives are emulated (a la US
Doubler).

All these functions are transparent at the Atari end; you never notice the
difference between SIO2PC and regular drives, except that the SIO2PC drives
are faster than any others (except Ramdisks and PBI interface drives).

Several different designs for the SIO2PC hardware are floating around. Best contact the author for the latest details.

SIO2PC 4.13 is shareware by Nick Kennedy, mailto:nkennedy@cswnet.com

---

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/developer list).

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige &
black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
800-D (Developers Bus System)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
1600XL ????
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE/AMY sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:
1010
9 V AC 15.3 VA (1.7 A) Atari#CO14319 transformer:
400,800,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA014748 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA016804 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 31 VA (3.4 A) Atari#CO17945 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551
9 V AC 50 VA (5.6 A) Atari#CA017964 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551

9.5 V AC 40 VA (4.2 A) Atari#CO61636 transformer:
1027

24 V AC 3.6 VA (150 mA) Atari#CA016751 transformer:
830

5 V DC 1.0 A (5.0 W) Atari#CO70042 adapter:
65XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CO61982 adapter:
600XL,800XL,65XE,130XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CA024814 adapter:
600XL,800XL,65XE,130XE,XE Games System
5 V DC ??? A (??? W) Atari#CO81982 adapter:
XL/XE

6 V DC 300 mA (1.8 W) Atari#??????? adapter:
"410P"

9 V DC 200 mA (1.8 W) adapter:
MPP1000C

9 V DC 500 mA (4.5 W) Atari#CO16353 adapter:
XEP80,SX212,2600
9 V DC 500 mA (4.5 W) Atari#CA014034 adapter:
XEP80,SX212,2600

9.3 V DC 1.93 A (18 W) Atari#CO18187 adapter:
Indus GT,5200
11.5 V DC 1.95 A (22 W) Atari#CA019141 adapter:
Indus GT,5200

5 V / 12 V DC 1.1 A (5.5 W / 13.2 W) Atari#CO62297 adapter:
1400XL,1450XLD

These draw their power from the SIO +5 V:
XM301 (60 mA),XC12,ICD/FTe P:R:Connection

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410,815,820,825,1025,1029,XMM801,XDM121

The power supply requirements for the following are still needed:
??? V DC ???? A (???? W) Atari#CA060535 adapter:
835

XC11 program recorder (no brick needed -> internal or SIO source?)

OTHER:
The ICD/FTe Multi I/O (MIO), all versions, can use both AC and DC supplies.
But stick to voltages of at least 6.2-7.2 V.

Subject: 13.4) What are the pinouts for the...?

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial
programs. I haven't heard anything about OASIS IV and CARINA for a while,
but BBS Express! Professional is presently sold and supported by K-Products.

Subject: 13.6) What version of Atari BASIC do I have?

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals & accessories etc., but contains salvageable parts.

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

The following games support 4 player head-to-head play. Remember, only the 400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Breakout, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor.

Thanks to mailto:jlodoen@shell.portal.com (Jeff M Lodoen) for initial info.

Subject: 13.9) Why should I disconnect the 810/1050 power supply before connecting or disconnecting SIO cables?

Rich Mier writes:

You've been plugging and unplugging the SIO cable with the 1050 power pack plugged in, right? That's a no-no. Most of the time it's Okay, but about 1 in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right, rear of the main board. A 14 pin DIL chip. Actually it is an array of 5 transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be ON on the CPU. The problem has to do with the secondary winding of the Power Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cs.ruu.nl/wais/html/na-dir/atari-8-bit/vendev.html

8207 BRIARWOOD LANE
AUSTIN, TX 78757-7642

Subject: 14.4) How do I use my new or emulated Atari?

"The Unofficial Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms. See:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

Subject: 14.5) What prominent Atarians are reachable by e-mail?

The "Who's Who in the Atari Community E-Mail Directory" includes people involved in all of the Atari computing and gaming platforms. This directory is maintained by the managers of the Cleveland Free-Net Atari SIG. Write to mailto:xx004@cleveland.freenet.edu (Atari SIG) or see: http://ace.cs.ohiou.edu/personal/mleair/whos_who.html

---

Subject: 14.6) What hardware upgrades, modifications and add-ons are available?

The Atari 8-bit Hardware Upgrade, Modification and Add-On FAQ is maintained by David A. Paterson, mailto:davepat@total.net

He posts it irregularly to news:comp.sys.atari.8bit

> think I'd be better off if I at least set the colors for the top half of
> the screen in a VBI instead of a DLI on the first scanline.
>

this problem sounds like the vbi takes too much cpu-time...

try the following...

1. for testing do not use the 546/547 vector...
2. try the 548/549... the deferred vbi...
lda #0
sta $d40e
lda #<vbi
sta 548
lda #>vbi
lda #$c0
sta $d40e
...

vbi jsr effects
jmp $e462

if this doesnt work... make a test and use this...

1. do not use a vbi...
2. set the dlis as usual
3. make a loop in the main-routine like this
```

```
loop lda #1
sta 540
loop0 lda 540
bne loop ; waits for vbi
jsr effects
jmp loop
```

or another helpfull thing is to install a "frame-counter"...

```
...
lda #0
sta nmien ; $d40e
lda #<vbi
sta 546
lda #>vbi
sta 547
lda #dli
sta dliv
lda #dli
sta dliv+1
lda #$c0
sta nmien

main jsr wait ; waits for vbi finished
lda #0
sta frame_counter ; sets the frame-counter to zero
jsr effects
lda frame_counter
sta store ; save the needed vbi-times
jmp main

wait lda #1
sta 540
wait0 lda 540
bne wait0
rts

vbi inc frame_counter
jmp $e45f

frame_counter dfb 0
store dfb 0
```

so you can press reset after a while and look into the memory-place of "store" where your amount of vbi-time is needed...

maybe this could help...

please code on...

All true. And you can put that ASCII 12 into text that you've prepared before hand with the intention of sending it to the Deskjet. But for partial pages printed on the spur of the moment, hitting the button is easier. I do it all the time when I want to print out a directory from my clone from DOS.

have
>the full CRT monitor.
>
>

The Apple //c and //c+ were heavy by today's standards. I carried a //c
with me to visit homebound students for many years, with the green-scren,
9" monitor and a modem that hung on the wall. The Board of Ed looked at
the LCD screen, showed some interest, and was told that it wouldn't be
practical for heavy-duty schlepping like we would do with it. Too bad
they were scared off. They were also suckered into buying a bunch of
battery-operated, thermal printers made by a small outfit in California.
Most of them were shipped with bad cables which I reworked and got
functioning, only to have the printers all die some months after the
outfit that made them went belly-up. The //c's keyboard was a horror.

The //c+, and a clone of it made by Franklin, were somewhat better. They
could take 3.5" floppies, for one thing. I don't recall the other
improvements.

But never, in my experience with Apple, did I find anything to make it a
superior line for educational use when compared to the Ataris. Atari had
the technological features to grab and hold kids (sound, graphics, etc.)
while Apple knew how to market their machines to schools. That was the
difference.

215. Q: 8bit magazine info

Ok, we are now at THREE sites for the Atari WebRing.

ANY and ALL Atari WebSites that pertain to the 8-Bit Computers, the gaming consoles (2600, et al), hardware hacks, vapourware, etc. will be considered for the WebRing. I am not currently accepting Atari ST/TT, Falcon, Jaguar, etc sites for this particular ring. =)

Please submit your site now, once I get 5 ppl's submissions I will set the ring up and send everyone the source code (pure HTML) for inclusion on the pages.

>I have only seen IIe's, and one II in a thrift store.

The IIc was barely wider than a keyboard without numeric keypad, maybe 2
or 3 inches thick, and (very much a guesstimate) 12 inches deep. Large by
modern standards, but I gather it was a miracle of compact design when it
was introduced. It did have a half-height 5.25" floppy disk and a power
supply crammed inside that package. As somebody else pointed out, a later
version, the IIc+, came with a 3.5" drive instead.

The IIc is nowhere near as common as the IIe. It was introduced pretty
late in the life of the Apple II, as I recall, and wasn't ever as popular
as the other II models.

<yendor@blarg.net> wrote:

>That TIA chip or whatever it's called in the 2600...that was a standard
>part? Was the uP a standard part?

Both pre-existed the 2600 -- they weren't designed for it. The TIA was
just a chip you could use to drive a TV. Atari glommed that together with
a CPU, a *minimal* amount of RAM, and a sound chip to make the 2600. They
didn't even put in DMA for the TIA chip's screen refresh operation, so the
programmer has to slam pixel values into the TIA registers as each scan
line is drawn (for this reason you only get about half of the CPU for your
actual game).

>Incidently, does anyone know where I can get the information necessary to
>write a 2600 program, i.e. instructions, memory map? It doesn't use a 6502
>or derivative does it?

Can't be sure offhand, but if it doesn't use a 6502 it uses something
close. I have seen a 2600 programming FAQ floating around somewhere, try
a web search. I wouldn't recommend it: getting a 2600 to just display an
image, much less an animated game, is not easy.

>Regardless, how many emulators do we have now for the 2600 and 800? With
>all that documentation out there describing what the Atari chips are
>supposed to do from a software standpoint, I don't think it would be very
>difficult to do. Sprites...er...player missile graphics, and display lists
>are not rare elements any longer.

The problem isn't having similar technology yourself. (Actually, hardware
sprites and display lists are not used any more, since in the modern world
you just have a CPU fast enough to do all that with blits.) The problem
is to *exactly* simulate the behavior of the real Atari hardware. If you
want to do that with hardware of your own, you are in for a really
difficult task.

>Why do you think the shrunk 2600 would sell better?

Because the 2600 sold how many millions of units? There are a lot more
people out there who laid their hands on a 2600 than on an Atari 8-bit. I
guarantee you that selling to the few remaining people willing to buy a
new Atari 8-bit computer would not make money. On the other hand, there
are so many 2600 carts sitting in attics that if somebody sees this nice
little $15 box that can play them, they might be tempted to pick it up.
And many of the clone 2600s have a large ROM containing hundreds of
(pirated) games you can choose from.

>It does seem obvious though that the 2600 would be easier to shrink. It
>doesn't do a whole heck of a lot. It would be a nice final exam for some
>EE student. :)

Not me. I get to have enough fun designing a PCI card this quarter. :)

The 2600 used a 6507 CPU, which is a 6502 in a 28-pin package. It only
has 12 address lines and no IRQ or NMI, if I remember right. The same CPU
was also used in the 810 and 1050 disk drives.

For unix users: (and perhaps WIN95's version)
ftp
bin
prompt no
mget *

some versions of unix ftp let you do subdirectories... such as NCFTP:

get -R * will re-create the entire tree structure. Then again, You could
just get a "mirror" program to copy the entire site and update your local
copies when the source is. *grin*

Take five minutes to read this and it WILL change your life.

I've been a fool so far. Yes, I admit it I've been a fool. I've
been doing this on local BBS's for the last 2 years. I've been
getting about 40 to $50,000 a year if that. I tried it the net
3 weeks ago and I wouldn't believe it! Not just a little each week
(barely enough to keep my head above the debt), but tons, I mean
big bucks! In the first week I got three hundred dollars, then a
week later, a couple of thousand, and by the end of the third week,
I had recieved nearly $32,000.00.

It's REALLY SIMPLE to do too!!!

Here's all there is to do:

STEP 1.

Invest your $5 by writing your name and address on five seperate
pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING
LIST."
(In this way, you're not just sending a dollar to someone; you're
payingfor a legitimate service.) Fold a $1 bill inside each paper,
and mail them by standard U. S. Mail to the following five addresses:

1-Sam Coice
25550 Buckthorn Ridge Rd
Pioneer Ca 95666

2-Peg Vickmore
14905 Highway 88
Jackson, Ca 95642

3-Brian Hyson
4278 Sayoko Cr
San Jose, Ca, 95136-2335 USA

4-Daniel Hanlon Jr.
6001 Fox Run
Fairfax, Va 22030

5-Joe Munchak
13535 Union Village Cir
Clifton, Va 20124

STEP 2.

Now remove the top name from the list, and move the
other names up. This way, #5 becomes #4 and so on.

Put your name in as the fifth one on the list.

STEP 3.

Post the article to "at least" 250 newsgroups. Rembering that the more that you post on, the more people see it, and the more you will get. There are at least 30,000 newsgroups at any given moment in time so don't be stingy.

STEP 4.

You are now in business for yourself, and should start seeing returns within 7 to 14 days! Remember, the Internet is new and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back about 5 responses. Yes, thats right,only 5. You make $5.00 in cash, not checks or money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250 additional postings with your name at #4, 1000 postings. On average then, 50 people will send you $1.00 with your name at #4,....$50.00 in your pocket!

: >that it won't go this fast?Is there some custom disk 850 handler out there?

: >
: > : - NOT be using data compression
: >
: >Why not?

: Well, say if the 850 cannot handle a data rate more than 9600bps, and
: the modem has a 9600bps connection, with data compression then the
: modem will end up transfering more data than 9600bps. This obviously
: would exceed what the 850 can handle.

uh,if you have the 850 set at 9600baud,then the modem will ALWAYS send at
9600bps.Never slower nor faster.Either it sends at 9600 or not at all.

: >: - set your modem to only work at a maximum of 9600bps
: >
: >It doesn't really matter since it will never send data to the 850 faster
: >than 9600.

: It sure might try to.

How would it try?

: >
: >: - check what kind (if any) flow control the 850 supports

: >: and set the modem likewise
: >
: >The 850 has RTS and CTS lines.But it doesn't suport flow control.

: That is simply but one kind of flow control. There is also xon xoff.

The handler does not suport XON/XOFF either.It's totaly up to the programme.

: >The handler ignores these lines,except to report their status to a programme.
: >It would be up to the programme to implement that,and none do.
: >Of course,anything can suport XON/XOFF.Kermit-65 does.
: >But since flow control only matters when uploading Z-modem,and the Atari
: >can't do that,the whole matter is moot.
: >(though Kermit-65's flow control DOES help to stop character loss)

: First, there is a Zmodem for Atari. Second, you admit that it matters

Yes,but since you would be uploading from a non-Atari,it doesn't matter.
(the Atari would only be downloading)

: in Kermit. And thirdly a file transfer through a protocol looks just
: the same to the modem and the serial port on the 850 (simply data in
: and/or out) as any other data exchange, the only exception being that
: the data flow is more busy. It is the term software or what have you
: that distinguishes between a protocol and regular data exchange.

If the 850 or P:R:C could actually go at 19200,you might try to use it to
hook up a 14400 modem.But if you tried to upload,you would overflow the
modem buffer.
(the term programme wouldn't know when to pause)

: > : > : - check on how the 850 treats the CD line from the
: >modem : and set the modem similarily
: >
: >It ignores the DCD line.It's up to the programme to monitor it and take
: >action.

: Okay okay. So what I should have asked instead of how the 850 looks
: at it I should have asked how the 850 _combined_ with his term
: software of choice looks at the signal lines. Whatever that
: combination supports or expects is how the modem should be configured.

Well,go with XON/XOFF then.I've never seen RTS/CTS done.

: >But a programme can't comunicate to the modem and 850 at the same time,

: Huh? A program can't communicate to the modem at all but THROUGH the
: 850.

The 850 connects the SIO bus directly to the modem.This is called
concurrent mode and when it's active,you can't talk to the 850 to get the
status of the CTS line.Nor can you alter the RTS line.You have to break
out of concurrent mode which of course means that any incoming characters
get lost.Maybe it could be done if you cleared RTS imediately after
exiting concurrent mode,but I don't know.

: >so RTS,CTS,and DCD are ignored in most programmes.
: >(except BBSes,obviously)

: How about his favorite term program?

Who's?
Term programmes ignore the lines for the most part.Kermit-65 does raise
RTS to allow the modem to comunicate,but leaves it alone thereafter.

: >: Your Zoom modem has NVRAM for two stored profiles. You can transfer

Janice in NYC (Sapphire@innonyc.com) wrote:

: dklugh@freenet.columbus.oh.us (Daniel Klugh) wrote:

: >I never understood why 2 RS232 ports couldn't use the same IRQ.

: They can and do. The standard IRQs are IRQ 3 for Com2 and Com4, and IRQ 4
: for Com1 and Com3......on many systems, you can change it. The problem is
: if you try to use 2 devices hooked up to 2 comm ports that use the same IRQ
: _at the same time_ is when you get system lockups and stuff. For example,
: if you have your mouse on Com1 and your APE cable on Com3 and you have them
: set to use the same IRQ, you can't expect your mouse and APE to work at the
: same time, because the system has no way of knowing which of the two comm
: ports the data is coming from. So that means you can have a modem hooked
: to one comm port sharing an IRQ with say your Atari (via APE), but you
: can't use the two devices at the same time (i.e. using your PC's modem with
: the ATari via Ape).
: They could solve this problem by assigning each comm port a different IRQ,
: but there's a total limit of 16 IRQs that can be used, no matter how fancy
: your PC, and several are already reserved for system use. Which is why you
: can have a nice fancy Pentium with APE, three serial devices, two printers,
: a sound card, etc., but you can't use anywhere near all of the devices at
: the same time since all of those devices communicate with teh computer via
: IRQs.......

: >The BIOS doesn't even use IRQs so it's clear that the BIOS (or whatever)
: >can detect whether there's data at a port.So when a IRQ sounds,why doesn't
: >the RS232 handler just look at both ports?

: The reason IRQs are implemented in the first place is to multiplex
: different hardware devices. It's far too expensive and impractical to make
: independent communication lines on the motherboard for all existing comm
: ports and all future potential hardware addons, so they were forced to
: compromise.

The point is since the RS232 handler will get the interupt no matter which
(COM1 or COM2) RS232 port activated the IRQ,the RS232 handler would simply
look at BOTH RS232 ports for a byte to read,read it,and put it in the buffer.
Then the programme can read it when it gets around to it.

: >: When using w95 all your serial in/out requests are trapped in ring 0 and
: >: have to go through a number of VxD's to reach the hardware. If any
: >: of these VxD's decide to ignore stuff from your new com port in
: >: favor of the mouse driver, it will act dead.
: >
: >And people wonder why I don't "upgrade" to Windows.

: It has nothing to do with what operating system you use, you can use DOS or
: NT or OS/2 or Linux and you'd still have the same problem if you use two
: devices sharing the same IRQ at the same time, because it's a hardware
: conflict, not a software one.
: Maybe you should upgrade to a Mac instead (sorry, couldn't resist).....

I just meant all that "ringing" stuff.

Actually there is an updated version of the program called "UTIL" that
will read AND write to an ATARI double density disk on the PC 5.25, it
works very well too. This is of course if the 1050 disk drive is
capable of D/D (U.S doubler upgraded or HAPPY or whatever).
One excellent feature of the program is it will convert ATASCII format
TXT files to ASCII as it is being read, and also writes vice-versa. It
all comes down to the command line params, like adding a -B to read
binary only (no conversion). You can find it on my WEB page..... it's
called MYUTIL.ZIP

>On importing WORD PERFECT (gag) or other WP files into a PC: use the
>"print to disk" option .. this creates an ascii file, which is then
>easily uploaded (via null modem cable) to the PC.
>
>An alternate (but much longer an tedious) method is to send the files
>you want xfered from your Atari to your "storage space" on some BBS.
>(I used to do this with the local BSD FREENET) Then, log into this
>same "storage space" with your PC, and download it.

Yeh I remember doing this with an ST BBS, it had BINKLEY TERM (I
think), it was great at the time, I could upload a TXT file in ATASCII
and then download it in ASCII. I didn't have any other way to convert
TXT files then, so it was the way to go.....

>I like the null modem cable MUCH better.

Great fun trying to set it up, I used to do it too. But a bit tedious
now I think, altho I know there are still 8-bitters who have to do it
this way. All I can say is, have an ATARI DAY :)

Source record: 77147

That TIA chip or whatever it's called in the 2600...that was a standard part? Was the uP a standard part?

***
Incidently, does anyone know where I can get the information necessary to write a 2600 program, i.e. instructions, memory map? It doesn't use a 6502 or derivative does it?
***

Regardless, how many emulators do we have now for the 2600 and 800? With all that documentation out there describing what the Atari chips are supposed to do from a software standpoint, I don't think it would be very difficult to do. Sprites...er...player missile graphics, and display lists are not rare elements any longer. Especially with all of the new fangled stuff they use in the coin ops. I don't think anyone would waste their time copying the chip or worrying about the original chip technology. They could simply emulate the interface using their own technology. The only genuinely proprietary chips that I can think of are the POKEY, ANTIC, and C/GTIA. That would be only 32 registers and the display list processor to emulate.

Why do you think the shrunk 2600 would sell better?

It does seem obvious though that the 2600 would be easier to shrink. It doesn't do a whole heck of a lot. It would be a nice final exam for some EE student. :)

Yes they are Bank-selected. They use the memory location $E500 (I'm
fairly sure of this) to switch RAM in and out of certain memory
locations in the cartidge area. So making a copy of these Super-Carts
would be a hard job for even the most experienced programmers.

BTW- happy new year to you also..... :)

lenspencer@aol.com wrote:

>You gotta love that FTP. No batch transfers, no crash recovery, WHAT WERE
>THEY THINKING???

In its defense, it is kinda old.

BTW, you can do batch transfers. Type "prompt" to disable prompting for each file, and then "mget *" to get everything, or "mget *.txt" to get everything named with an extension of .txt. If you aren't familiar with UNIX, be aware that UNIX wildcards work different than DOS in some situations.

And there are extensions to FTP that allow crash recovery.

FTP actually has a lot of stuff. The "help" command should give you a list of commands, you'd be surprised how many there are.

Howdy freind, in answer to your question, Turbo Basic resides on a Boot Disk right? It is a very likely possibility that that version of Dos is only configured for a single drive. Poke it for 2 drives then re-write Dos to the disk.

Perhaps an easier way would be to just copy your Turbo Basic over to a fresh Dos disk written from the Dos that is working...

Hello !

Still wish you a hapy new year.

But one question - how do the "super-cartridges" (f.e. SDX) work. Ii¿½ve heard that there is something like a bank-select-mode ...

Thanx

Matt

P.S. Bye the way - does anybody know, how to program the R-Time-8 directly ?

On reading Atari Disks with a PC .. Don't think you can do it easily. There IS a program that lets you read PC disks on an Atari, but this program doesn't let you save to that disk. You're better off just doing a file xfer via a null modem cable, running terminal programs on both the PC and the Atari (I do this all the time).

On importing WORD PERFECT (gag) or other WP files into a PC: use the "print to disk" option .. this creates an ascii file, which is then easily uploaded (via null modem cable) to the PC.

An alternate (but much longer an tedious) method is to send the files you want xfered from your Atari to your "storage space" on some BBS. (I used to do this with the local BSD FREENET) Then, log into this same "storage space" with your PC, and download it.

I like the null modem cable MUCH better.

Bill ... 17 yr Atari 8bit user

Perhaps we also need a better definition of what 'free' is.

For example:
The air at the South Pole is free - but difficult to get to.
Sugar is freely available at most supermarkets - but at a purchase price.

On the other hand "The Truth shall set you Free"

Well, if you are using the SIO2PC cable, whats the prob? The ATR files
are direct images of real ATARI disks, so just load them into APE and
copy directly to a real disk drive. Of course if you don't have the
cable (yet?) I would highly recommend it.

There's some information available on the Web, including a commented
source listing for Combat, and the Stella Programmer's Guide, part of the
original 2600 development kit, which details quite a lot of what you'd
need to know to write a 2600 program.

The 2600 used a 6507, which is identical to a 6502 except that it has
only an 8k address space and no external interrupt lines.

>Please help...

Well, after recieving a new Atari 800xl (or newer Atari), I plugged it in and it did not work. So, I finally deduced that it was a PS problem. I took the case of the PS, and attached a capasitor to it. After that, I placed it in a tin, and for the most part, both Atari's work.

I have two minor problems, though.

1. Using either computer, our Commodore 1702 Color Monitor displays a dark horizontal streak that gradually scrolls upward. This just makes the colors darker as it scrolls up, but I'd like help trying to fix this.

2. Using either computer with our PointMaster joystick, it will sometimes jam. This occures when I press the joystick left sometimes. This causes the screen to display all sorts of characters.

So, If anyone can help with the monitor or joystick problems, please email. Also, I'd be willing to buy a working pair of joysticks. Since our trackball works, I suspect it's the joystick, not the joystick port.

Thanks again!

>or derivative does it?

Yes, it uses a 6507 which is essentially a 6502 with a halt status and
only 13 address lines instead of 16, meaning only $0000-$1FFF was
available to it. The cartridge takes up all memory from $1000-$1FFF,
the graphics and sound/control chips take up $00-$80 and $200-$2FF,
respectively. RAM lies at $80-$FF and there is an exact copy of page zero
at $100-$1FF at all times (the stack page, meaning you can change a
vital register with a PHA).

More information is available, search the Web for it.

>Regardless, how many emulators do we have now for the 2600 and 800? With

Plenty.

Yep same thing here. I set the dang emulator up on my friends
computer and the sound works fine... it's damn frustratin. Still
the best Atari emulator by leaps and bounds (but I want my sound!
I'm thinking of upgrading my computer to work with the emulator!).

I can't speak for other people at the time, but I spotted it right away--and I'd never even used one. My point is that they could have been a little more imaginative in the prop department. For 2001, Kubrick enlisted the help of IBM to come up with a plausible look for HAL. They didn't say to him, "Well, here's our latest model, the 370. It's even got a light pen. Just put one of these babies on your space ship. No one will know the difference."

Did you write it all in upper case? TurboBasic allows commands in lower
case, but the "D:" in a file name must still be upper case.

Hi guys

I'm unsure of the legality of this one but... I'm trying to break the protection surrounding Sub Logic's Flight Sim II program (it's my favourite 8-bit program -- I have the original, boxed with manuals and I'm sure as hell not going to lose it for the sake of some creative protection programming) but the trouble is, I'm not too skilled in breaking copy protection!

I program a little in assembler with the Ass/Ed cart so I'm not a total duffer but any tips would be great.

Thanks in advance
Ed

Copy the disks with a sector copier, ignoring all the bad sections to
a new formatted disk.
Boot the disk. See if the game plays
Some versions of Flight Sim II have bad sectors and stuff, but the
program NEVER checks them. Maybe UR lucky and yours is like that.

Seems that there is a mistake in the archive. The sound files (.wav) M U
S T be placed in a subdirecdory called "samples" - try this and then
have a look again.
By the way - Markus said that the sounds were improved in V 0.16, but
IMHO the sounds of V 0.14 were much better ...

If read the BLASTER variable. Basically the same, but it's SET BLASTER=
instead. You'll find this will help a lot of other things find you soundcard
as well.

If you're interested in XLiT check out XFsio at www.kwll.demon.co.uk

One of the nice things about windows95. XL-it works fine with my sound
card, without any autoexec.bat or config.sys files listings of BLASTER
or SOUND16 etc. In fact, I can delete my autoexec.bat and config.sys
files, and XL-it still works with my sound card. The W95 drivers take
care of many things like this.

>heard that there is something like a bank-select-mode ...
>
>Thanx
>
>Matt

Page $D500 (I think) is used as a select line within the cart. The value on the data bus is read by the cart and used to determine which bank to flip to. Most bank-select carts occupy 8k: the upper 4k is fixed, and does most of the housekeeping, such as initializing the cart etc. The lower 4k is what gets selected by changing writes to the $d500 page. I think that different carts can be made aware of different addresses on the page, so flipping banks in Express cart won't alter SDX as well.

The WAV files were actually residing in that "samples" directory, just
as in the previous version (0.14), but- no sound! Looks like I'll have
to stick with 0.14? Not that it really matters for me, I use a real
130xe. I just wanted to see if it would work.

That's one of the things that strikes me as funny, I'm running
it under Windows 95 and have no sound. I've noticed other people
who can't get sound are using the same IRQ as me (5), maybe that
is the problem.

While this would be true today whereas people, in general, are more computer sophisticated. In 1984, a lot of people simply didn't know or care about computers. They probably figured they lived this long without them, why start now. Nowadays a computer used in a movie would need to be mocked up to look very hi-tech or it would look out of place in a futuristic setting. Signs of the times, I guess.

Yes, it is "6". OPEN #1,6,0,"D2:*.*" gets a DOS 2.x directory.

Under SpartaDOS, changing the "0" to "128" gets the Sparta directory
format, with time/datestamp and length in bytes.

As if anyone cares, under DOS XE change the "'6" to a "7" for the long
directory format.

If you ever get to Cedar Point in Sandusky, Ohio, the arcade there has
a wide selection of older videogames. (The arcade version of Donkey Kong
is lot different from my 8-bit version!!!)

>
>
>
>

Most people can guess my position on this. And Markus, if you're reading,
I hope you will reconsider. I'm not a game fan. In fact, I'm the
original model of a joystick klutz. I believe there's more to Atari
computers than playing games. My position as an officer in a couple of
user groups dictates that I won't support the distribution of
copy-protected software, no matter how much I wish and work for the
survival of this community. Emulation contributes to the survival of the
community, and XL-It, like the others (perhaps better than the others in
some respects), makes it possible to do the following:

1. Have people who've forsaken their Ataris get back to them

2. Make a truly portable Atari using a notebook PC or Powerbook

3. Appreciate the difficulty and challenges of emulating our truly
unique classics

I could go on and on, but you get the point. Everyone who uses an
emulator is looking for more and better. It puts enormous pressure on the
developer and frustrates the user. The results can be seen in Markus'
statement, if he really did say it.

My user group experience parallels the process I've just described. I've
seen more than one group break up because a future Atari product was
announced, or just hinted at, and was not forthcoming when the anxious
users expected it. Nor was it forthcoming some time down the road.

Perhaps we need to learn something about delayed gratification?

: get ahold of the program?

"gz" file are files for UNIX.It's probably a UNIX Atari emulator.
("gz" is short for "GZIP",a UNIX compression programme like "compress")

You're out of luck unless the FTP site you got the file from will un GZIP
it for you.Of course if that gives you a "tar" file then you're still lost.
(just type the filename without the ".gz" part to FTP the file un-gz'ed)

It's already been done, though don't let that stop you from creating
another. If you want to DL mine, it's at:

ftp://members.aol.com/atari800xl/POKEY11.ZIP

BTW, I'm currently working on a 2.0 release. It'll fix some minor bugs
and will add support for multiple POKEYs (mainly for arcade emulation).

I to those serious users of the Atari 8-Bit cominity hereby apologise!

I know what the past few posts relating to Copyrights will bring..at least take it with a lighter light...Apple ll has to be moved to another base?

haha..and if you girlfriend, sweet heart. WIFE ect feels neglected then let her on here to respond!!

Depending upon what modle you have of the INDUS disk drive, the stepper motor controls everything. If you open up the unit and find you have a stepper motor installed (about 3-4inches round..that_) has claw like brackets about half way up the stepper then replace the stepper motor with one that is solid from the motor to the base where it is connected.

If you have the latter, or the earlier version...by all means clean the head and track the head travels on!...G5 means the disk is bad it can not read the boot sector..if the disk works on another drive then clean the head.if that doesn't work the the head need to be realigned.!!

You say Atari 800? Well you can't have a hard drive on it unless you
can come up with and ATR 8000.

With later version of atari you can attach a hard drive to those units
with a little expense and effort.

At this point in time what you say and I reiterate is irrevelant!..

What I am in for is no enfrindging upon their rights!

Hey Girlfriend, wife, daughter..not getting enough attention because you mate is too involved in getting software that doesn't belong to him? Not a problem...have Myself, and several others to offer their services to you as a neglected piece of property! (at least they think they own you and what you do!!!)...

Now that I know you are looking over the shoulder..get yourself an account and gurantee you that when the dud relenquishes his right by downloanding a piece of software somewhere in the world you can be in your city or another enjoying company with one who is willing to turn the damn thing off for your company...

Worth something? Don't knock it untill you tried it!!

Lets put one's personal rights in the right perspective!...I pay to have an intellegent programer do something for me then the product belongs to me.. I own all rights to it as I paid for it. The law says I and my heirs own it until 70 years after my demise. So for the money I expend I attempt to sell it..granted the sales are slow but the product is still mine..

There are those out there that would not buy it if the price were reduced to cost!...Gurantee it as I own right to an Interface board to a hard drive and have done so...still too damn high in price..

There are those of you out there that say I should give up my rights to all I have worked for and went into debt for so that you can enjoy my efforts..

Now I would like to change the whole thing arround...to those of you that are married and have this attitude this is addressed to you...You have spent time money ect on your wife!....I want her!!!!Its my right!! haha
gotcha...you do not have time for her anymore you are too busy bitching about Copyrights...I don't care anymore therefore I have the right to her and I do expect you to relinquish all rights her so I can enjoy what your have been missing out on! I have not envested one dime in her welfare, clothing, health, ect...but beleive me I would die with a smile on my face from taking from you what you wish to take from those that have spent, time! Money!, extended effort! and put up with all the crap that come with purchasing a product!...

For the realisiation, of something gained! Your wife will be treated like a lady and I assure you I would turn off my computer if you relinquish your rights to this lady!.....

Like I said! I surely would die with a smile upon my face! I nor anyone else could handle over 4,000,000 Ladies and that is were we stand today..

Send here to me...

For regular DOS files, you could use the COPY command from
DOS 2.5 or a similar DOS.

I also have written a program, which copies complete
disk images on a sector by sector basis.
This program runs under BIBODOS, and I don't know
for sure if it runs under DOS 2.5
But I'm willing to send you the SynAssembler source code
and object code...

Well, of course we're interested.
As long as the stuuf is PD or Shareware of course.
No copyright material please!

As a matter of fact, if anybody else has nice
Public Domain or Shareware for the Atari 8 bit,
please send us a copy of it through email,
so we can include it on our CDROM.

Thank you!
Bo Schreurs.

295. Help Bring Videotopia to the Science Museum

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-10 00:00:00 UTC
From: no_junk_email@skypoint.com
Message-ID: <5b4jvc$dbv@stratus.skypoint.net>
Source record: 77102
Cross-posted to: mn.general,rec.games.video.classic,comp.sys.atari.8bit

For those interested in classic computers and videogames (home and coinop):

Videotopia is a traveling museum exhibit of classic video games and computer systems, put on by the Electronics Conservancy: "...an organization dedicated to the preservation and restoration of artifacts and information detailing the history of the electronic medium, as well as the use of these artifacts in informing and educating."

Videotopia board members include Nolan Bushnell, found of Atari and inventor of the first commercial videogame; Al Alcorn, formerly of Atari and co-designer of Pong; and Eugene Jarvis, creator of Defender, Robotron, and many other classics.

The exhibit itself looks pretty cool, with 30-50 fully operational classic coinop videogames that you can play (including a Computer Space, the first commercial videogame!). There are also exhibits of vintage home computers and videogaming systems, with multimedia informational dispays. The site listed below has much more info.

Anyway, the Science Museum in St. Paul is one of 23 museums currently considering booking Videotopia. If you're interested in seeing an exhibit like this pass through the area, visit http://www.videotopia.com and fill out the request form. The results are sent to the museums to help gauge interest level...

Scott

You could use SIO2PC, which is a PC program
which you have to install on your PC.
Then you have to build a SIO2PC cable
(the documentation for this cable is included
with the SIO2PC software).
From that point on you can transfer files from your
Atari to your PC and back.

An other program which does the same is called
APE.

Hi again,

We still have 4 systems left, each consisting of:

a Howard board
in case with the same footprint and color scheme as an Amiga 2000
the (Howdy) display unit
these are stereo enabled ... A Pinky/Mandy unit is NOT capable of stereo
full documentation
call it 3 pounds, 2 inches, or a few hundred pages... it's a lot
complete development software
9 Amiga floppies with Atari/Epyx programs, demos, sfx, utilities
1 Amiga formatted floppy with extra routines by Bastian Schick and myself
Expert technical support via email included.
Access to cartridge prototyping, production, packaging, & marketing included.

All this can be had for only $2000 + shipping each. You won't find a
better offer anywhere in the world! Atari charged developers $5000 for
these units but you get one for less than 1/2 the price.

We also have ONE Amiga 2000 with 5M RAM, 51Meg HD, WB 1.3 and the development
system preloaded on the hard drive. It's only $400 + shipping with the
purchase of a Howard board. This makes a complete (high-end) Lynx development
system for only $2400 + shipping (expect about $60.00 continental US)

Don't miss out! Just like Lynx games, these prices are NOT going to get
any lower.

}}}}}} Call Lance at Video 61 (612) 462-2500 to get yours now! {{{{{{

fine print:
1. You must supply your own monitor for the Amiga.
2. We accept most major credit cards, but the conditions are "no returns".
3. Personal checks will have to clear before shipping.
4. Units are returned from developers and sold "AS-IS". All of them
have been tested for all major functions to insure working status
before shipping.
5. The usual disclaimers about software doing what it is supposed to do,
not what you expect it to do in all cases and it's not our fault if
the UPS man drops it on your foot.
6. Any and all typos are mine...

>ideas?
>

Well, many years ago, I wrote such a program to do so for
PC's running Linux (I don't know if anyone ever did one for DOS,
or ported mine). It was originally called "PSIOX", and used a
cable that connected the parallel port to an SIO port. I later
integrated it into my Atari Emulator
(ACE: see http://www.csh.rit.edu/~shaggy/software.html)
but it might take some hacking to get it working right. I
don't remember if I included the cable specs in there or not.
Someday, if I ever get some free time, I want to clean up that
code and get everything working smoothly, but for now the source
is there if you're interested in looking at it or doing
something with it.

The way I had it set up, simulated Atari devices could
be mapped to disk images, ramdisks, or actual Atari peripherals
through the PSIOX interface. I hope that part of the code still
works with the newer Linux systems. I know it did about 3 years ago.

If it's an 800, not an 800XL, you have little choice other than using SIO2PC or APE with an IBM compatible computer (used XTs are as cheap as used Ataris). Corvus made hard disks for the 800 using joystick ports 3 and 4, but you'd be lucky to find one of those for sale.

Umm, the $E500 area is part of the OS CIO handler. According to Mapping the
Atari, $D500-DFFF: any access read or write to this area enables the cart
control line CCNTL as in the cart interface in the 400/800

313. Atari WebRing Almost Online!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-11 00:00:00 UTC
From: William Fisher <blackat@direct.ca>
Message-ID: <01bbff8f$7d44fce0$16f7aecc@127.0.0.1>
Source record: 77036

Ok, we are sitting at about 6-7 websites for the ring which I will
hopefully get online this weekend. To all those who have submitted their
site: you should be getting a package via e-mail containing the graphics
for your page. The graphics only take up 360x50 pixels and one is an
animated fuji (rainbow animation).

The official homepage will be online soon as well, hopefully this weekend,
I am a student so we'll see how the college homework goes! =)

Thanx to all who submitted their sites, to all those who didn't: why not?
It's free and you get a 'free' major link on every 8bit site out there...
what more do you need? =)

314. Atari 8-bit video output: Only RF?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-11 00:00:00 UTC
From: jcompton@typhoon.xnet.com
Message-ID: <5b72qb$l29@flood.xnet.com>
Source record: 77037

I was a little surprised when I picked up an Atari 800 last year and found
it only had an RF output on it--no composite or custom higher-quality
video out, like many of its contemporaries.

Did later 8-bit models add higher-quality video and audio output?

>breaking copy protection!

Just use a sector copier. The only "copy protection" on FS2 is it checks drive speed, which means it won't run from Happy drives, nor (unfortunately) on XF551's. As for legality, as long as you own the original disk, you are allowed to make a backup copy for your own private use. But if you sell the original, the copy must either go with it or be erased. This falls under the "fair use" clauses of the revised Copyright Code.

Hope this helps set your mind at ease.... dB^)

You could try cleaning the HEAD. I've found that after reading some of
the older disks, the head has a great buildup. Yes, it read the disks
ok, but when I went to write to a disk it was garbled etc. After
cleaning the head I had no trouble at all. I used a cotton bud and
methylated spirits, but I think you should try and use something that
won't damage it.
Anyone else use anything better?

If you will look on the right side of the 800, next to the SIO port, you will see a 5-pin DIN receptacle. This is where you will get your composite video and audio. The pinouts are:

(Looking at port)

1 5
2 4
3

1) Audio out (line level)
2) Composite Chroma
3) Signal ground
4) Composite Video
5) Composite Luminance

The XL and XE series dropped the Composite Chroma line, but there was a text file in circulation that described how to hook it back up.

Hope this helps....

320. NEW ATARI WEB PAGE :)))

I've contructed the 1489 version of the Atari->PC interface, verified continuity on all pins of both cables, and checked the voltage levels on all 1489 pins when it was plugged in, The interface seems to be doing what is should, yet when I boot my Atari 800, it just goes to the memo pad and APE doesn't register any activity in the SIO monitor. I've tried both COM ports and even tried changing the values of 'extra safety margin'. What else could be preventing it from working?

Have you tried changing the settings for the version of the cable?
I think APE comes set for the 2 chip version, so you will need to set
it for 1 chip. If all is set up right with the cable you should be
able to get something out of it. Also, what platform are you using to
run APE- DOS, or Win 95? I've heard a few people say that APE will
only work in DOS mode, altho there are a few who have success running
under Win 95.

In a message dated 1-11-97, Jason Compton said:
|
| I was a little surprised when I picked up an Atari 800
| last year and found it only had an RF output on it--no
| composite or custom higher-quality video out, like many
| of its contemporaries.
|
Either you actually have a 400 or 600XL instead of an 800, or you are not looking close enough. <grin>
-
The original Atari 800 has a 5-pin DIN monitor jack on the right side. The 800XL has the same on the back panel. The original 800 provides not only composite, but separate chroma/luma signals as well (just as the C64, which was actually released later, did).
-
The 800XL was built cheaper, and requires a small hack to connect the chroma line. Also, overall video quality is not as good as that of the original 800. There are additional hacks to improve the video output, however.

The first couple of times I tried it in Windows 95, but failing that I
ran the rest of the tests in DOS Mode.

333. FS - 800XL system

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-11 00:00:00 UTC
From: terryb@bloomington.in.us
Message-ID: <5b962m$p9a@news.hoosier.net>
Source record: 77056

Well, I have finally decided to part with one of my 8-bit systems.
I just don't seem to need to run them both at the same time like I used
to ;-)
Anyway, here's what it is:

800XL with 1050 drive, 810 drive, and printer interface. all
cables and power supplies. 1030 modem
Software:
Print Shop and Companion and Graphics Library 1
Graphic Shop
PrintShop Graphics 1 & 2
SynCalc
SynTrend
SynFile+
NewsRoom
BankStreet Music Writer
AtariWriter+
The BookKeeper Kit (complete big box and everything)
Cut & Paste
Financial Cookbook
DOS 1, 2, 2.5, 3, SuperDOS 5.0, Spartados 1.1 and 3.2, SmartDOS
Word/Spell/Graphic Magic
Sherlock 1050
DiskWizard II
Paperclip
Family cash flow & Family Budget
Space Base

--Books--

Compute books:
Mapping the Atari
Atari Collection vol. 1
1st, 2nd, and 3rd Books of Atari
Inside Atari DOS
Machine Language for Beginners 1 & 2
Atari Graphics

Atari Basic
The Elementary Atari
Advanced Programming Techniques for your Atari
The Atari Assembler
Your Atari Computer
101 Atari programming Tips & Techniques
Atari Basic Programs in Minutes

6502 Assembly Programming
6502 System programming
And maybe a few others

--Games--

Well, I have around 300. Most are binary load - a bunch on the disk, but
I also have quite a few original.
-A Sample-

The Hally Project
Zork 1 and 2
the Ultima series
Alternate Reality
Trains
almost all the Infocom Games
BoulderDash 1 & 2
ChessMaster 2000

well, there's a bunch of them.

I have all kinds of disk utilities, drawing progams, print
programs -- just a lot of stuff.

If it matters to anyone, I am NOT getting out of Atari 8-bit, it's
just that I have got so many systems that it's running me out of room.

I would prefer to sell all of this to someone as a complete system
(as in showing someone else the joy and wonders of the Atari 8-bit)

but I will entertain offers if I have something you need.

I have Real Computers - They're Ataris

334. FS: Atari Computer Goods! More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-11 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <5b9ulenll1@julie.teleport.com>
Source record: 77057
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! And for the Atari ST & newer Line of Computers We have updated the ST Catalogs most of all the ST Software Catalogs. Catalog updated and more Software Titles added such as Brand New copies of Ultima V for those of you fanatic Ultima Collectors for the ST & for those who like Battling in Mechanized Combat, their's BattleTech, OGRE & OMEGA! And for those of you with more productive things on your Mind, PrintMaster & PageSTream!

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking. And something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.
--
Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

335. How much is SD/MD/ED/DD ?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-11 00:00:00 UTC
From: peter@soemtron.sb.sub.de
Message-ID: <6Og7u84pzHB@peter.soemtron.sb.sub.de>
Source record: 77058

Howdy !

I know it's a often asked question but I didn't find a answer in the FAQ.
So my question is: how much is the maximum data storage (in bytes) and how
fast are of those different format options (meaning of SD/MD/ED(?)/DD) ?

I have a Speedy 1050 from Compy-Shop, I heard that my drive is now capable
to format real DD , what does that mean?

Where is the difference between the XF Format (DS/DD)? Means it the space
of two DD Disks on one side without flipping disks?

When can a PC/AT based DD-Floppy read my Atari Disks, and how can I
program it for my self? (Pascal or C++ example needed, no hardcore 8088
assembler please)

.
.

thx ...

Brian Siano (siano@cceb.med.upenn.edu) wrote:
: Here's a problem I've asked about before, but that was a long
: time ago, and I never followed up on it. I've got an old 800 system
: gathering dust, with a lot of 5.25" disks that have some text files
: I'd like to keep, and transer to my IBM system.
: These are the low-density disks, using the original 810 disk
: drive's formatting. (I do have the later drive, the 1040 or somesuch.)
: So, the IBm can't read them at all.

uh,you mean single density,not low density.
Low density means that your drive is writing to the disk at 250,000bps,
which all Atari drives do.(or somewhere around that speed,the PC drive
goes at 300,000bps)
And the 1050 is double density.

: How might I go about transferring them? It'd be terrific if I
: could set up a null modem cable through my 850 interface, but when a
: friend and I tried this, I couldn't get Procomm for Windows
: to talk with the 850 Express modem program for the Atari 800.

The FAQ which should always be in this newsgroup explains this.
The BIOS won't let you read single density disks.
Even if your're using a double density disk,the BIOS won't read 128byte
sectors.As you can tell,the BIOS sucks.
But there are programmes that access the drive controller on your PC directly.
Once again,these programmes are listed in the FAQ.

Well,what software are you using on the Atari side?
BobTerm is good.

: Any suggestions? Pointers to Web pages? People in the Delaware
: Valley that might be willing to help? Replies by Email, please.

uh,there's some in the faq.

: dklugh@freenet.columbus.oh.us (Daniel Klugh) wrote:

: >Aren't Macs just "school" computers?Much in the same way that Pascal is.

: Nope.

Just like how the Apple2 was a school computer.
(and PASCAL was FOR school,not a school computer)
I mean just look at the graphics capability,obviously not designed for games.
And a VERY simplistic OS.
(basicly programmes just use the Monitor's routines to access the screen and
slot card devices and keyboard)

: >I remember seeing one in a store once.I remember vaguely that you had to
: >manipulate little B&W pictures to do things.I about laughed out loud.
: >(B&W like a newspaper,not a TV)

: That was then. The now, for me, is a 150 MHz PowerPC 604, gobs-o-ram, 17"
: color monitor, etc. It's fast enough that Rainbow emulates the Atari
: 8-bitters at full-speed, 60fps. You did know that the Mac II came out way
: back in 1987, ending the era of Macs being B&W only, didn't you? :)

So,now you manipulate little coloured pictures.
That's kinda worse.At least with 1-bit graphics the lack of a text mode
only slowed down output by a factor of eight.(assuming 8x8 character cells)
With colour,it's even slower!
(is it planar or chunky graphics?)

: >Like a pictures of a sliding control to adjust volume or something.
: >I think Atari with MyDOS is a easy-to-use interface.

: I think you are in the minority. :)

With people buying Sega Genesis cartridges for then Super Nintendo,not
knowing where the "Any" key is,thinking that Sega Saturn disks will work
with their PlayStation,I'd say so!

But seriously,the childish control interface is what turned me off of the Mac.
Hell,that's a insult to children,I remember young kids being able to use
the Apple without little pictures to choose from.

I can't believe that people can't use the MyDOS interface,especially with
the instructions being free for download.

: >(if only DUP.SYS didnt re-load after loading every little binary file!)
: >The PC has a better interface than Mac.

: You have got to be joking. Even to a hardened CLI user, DOS is painful.
: It's like using UNIX with everything useful and good cut out.

Even a crippled UNIX interface is better than a Mac.You just go into the
directory,type the name of the game and off you go.
If the game needs options,then you can just put them in a batch file.
(many Microprose games are like this)

If you do more than play games,N-DOS (4-DOS) is a good enhancment to COMMAND,
which seems not to have been updated since the '80s!
I also used a shareware(PD?) Bourne shell way back when I used a PC.
One of the shell scripts for my Waffle board was a Bourne shell script.

: >Also,you have to BOOT handlers.You can't just load your RS232 handler
: >when/if you happen to want to call a BBS.Of course this isn't a
: >problem,since there is NO RS232 handler!!!

: There are RS232 drivers in the PC BIOS. Granted, they don't support more
: than 19.2K...

They're not IRQ driven.When you ask the OS for a block of bytes,it must ask
the BIOS once for each byte.When it asks,the BIOS just goes into a
loop,scaning the port over and over again,until a byte is present.
This means that there is no buffer,therefore,if two bytes come in,the
first byte gets lost instead of being put into a buffer.
It's like there's a one-byte buffer,in other words.

: >And the PC doesn't have P/M graphics.Nor a text winodw in graphics mode.

: You hardly need them in this day and age.

Even the 33mhz Sony Playstation has them.Quite a lot of them,as I remember.
(like 256 or something)

: >(that's why lots of games use 40col text.Because they can't use a text window,
: > and switching to 640x200 would be out of the question,they have to
: > bit-map the text on to the 320x200 screen.Hence,40columns!)

: Lots of games run at 640x480 now that there are sufficient CPU cycles to
: update that much at a reasonable frame rate...

Even Commodore got past this limitation in their 128.
(using a interupt to switch to text mode at the bottom of the screen)

: >Oh yeah,the incredibly HUGE slack!!!
: >Waffle keeps each and every message in a seperate file.But on
: >MS-DOS,sectors are huge.My HD had 8k sectors.A 512+MB drive would have 16k
: >sectors.A gigabyte drive would have 32k sectors!!!
: >(every time you double the size,double the sector-size.MS-DOS can only
: >have 65536 sectors("allocation units",really))
: >So my few megabytes of messages took up 20MB!
: >Oh,and you can't really un-delete files!

: >Well,enough PC bashing for now.

: Atari's solution is to not allow large partitions, which IMO is undesirable too.

You don't call 16MB a "large" partition?!?

And remember that you can have as many partitions as you like,and switch
between them at a momment's notice.
(at least with a GOOD interface)
But really,how big are you gonna need them for Atari games.
Remember,on a PC,for every pixel you need a whole BYTE per pixel,where as
you need one or two bits for each pixel for most Atari games.
(unless they use GTIA modes,that need 4-bits)
So,you don't need megabytes of disk space for games.

Yes, IRQ 5 is used for a second printer port, but I don't have a
second printer port (altho I could use one). Everything else that I
run works just fine using the IRQ 5, all except XLit 0.16 :(

MD I've seen in a few programs- simply MEDIUM DENSITY aka- 1050
Enhanced Density. Also there is the XF551 which uses DS/DD=360k (using
both sides of the disk). As for reading ATARI disks on a PC 5.25,
there is a program called UTIL which will read and write Double
Density ATARI disks, and also do text file conversions ATASCII->ASCII
and back.

From: terry.ortman@mustang.com
Message-ID: <853105026@mustang.com>
Source record: 76977

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $50.00 or best offer. These SELL AT Video 61 for $49.95 used.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $90.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $55.00.

Both ATR8000 and Dual Disk Drives, $125.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them. Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00. These sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package. These are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to

re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for $59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

ATARI RELATED MAGAZINES, Found this unopened box that I had boxed up for a person, but then he never sent the order in:

ATARI EXPLORER, February 1985, Cover Price $3.00
ATARI EXPLORER, April/May 1985, Cover Price $3.00
ATARI EXPLORER, Summer 1995, Cover Price $3.00, $3.95 Canadian
ATARI EXPLORER, Winter 1986, Cover Price $3/$3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Sept/Oct 1986, Cover Price $2.95 $3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Nov/Dec 1986, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Spring 1987, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Summer 1986, Cover Price $2.95 $3.95 In Canada

The Above Magazines are in good/fair confition. They are from the same collection the above 1027, 1050, are from, the previous owner suffered a stroke and asked me to dispose of these for him, as he has moved, and I am asking FAIR MARKET VALUE, as can be seen from the prices sent to me by Video 61, who seem to use the Internet and stocks and sells Atari equipment, Video 61 may send me an offer on these then, as I need the cash.

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

I was wondering if anyone knew of a source for the type of metal screws that are used to hold the plastic cases together on the Atari XL/XE computers and on the 1050 and XF551 disk drives?

Would like to find a source to buy them by the 50 or 100 pieces. I know Best Electronics sold them for like $1 or $2 for a set, but would like to buy them is larger quantities. I recall seeing them in an electronics catalog a few years ago, but do not remember which one.

Thank you and take care, Jon

Source record: 77060

I have an Atari 130xe, 2 XF551 drives, 2 hayes modems(300 and 1200 baud), an atari printer, and atari cassette tape storage device, 2 atari joysticks and lots of software for sale.

I believe one of the drives starts and stops by itself...and I am not sure if the modem works...All this stuff I had laying around for years. I think a 'happy' chip is installed in the computer.

Best offer takes it all as is.

leave email to mrralan@aol.com if interested as I don't check the newsgroup.

: margin'. What else could be preventing it from working?
I constructed the one chip version, and when I tried it on an older 386 with a 15450 I/O card I had no success. Everything on the SIO board seemed to work fine, the soldering was ok and I couldn't figure it out. I got my hands on a new I/O Card with the 16550 chip and the SIO booted up right away. I've had it work successfully on a 386dx25, a 386dx33 and a 486dx33. Just make sure you have a newer I/O card with the newer chip - it seems to support the extra speed needed better. Of course, these were my own personal results and opinions... your's may differ.

The BLASTER= settings is not needed with the latest XL-it! version.
0.14 worked on most systems because there I used another (slower!)
sound-library. That library was more compatible than the current
VAT-PM library (that does autodetecion and it's very iffy).
Anyway I'll write my own sound-routine that will use Ron Fries'
excellent pokey-emulation.

Bye,
Markus Gietzen

PS: Maybe BLASTER=.... can help on a few systems. I don't know the
internals of the VAT-PM library.

From the c.s.a.8 FAQ, section 12:

SD--Single density, 90K.
ED--Enhanced density, 130K.
DD--Double density, 180K.

I've not heard of MD.

The recommended cleaner for Atari disk drives heads is 91% Isopropyl Alcohol. Many drug stores sell it for $1.00 for a 16oz bottle. Do not use the more common 70% to 80% Rubbing Alcohol. The 70 to 80% Rubbing Alcohol often contains other things besides Alcohol and Water and can leave an oily residue.

>Ah yes, sorry. That was pretty stupid on my part to overlook.

Not really. If you're not used to the 8-bits (Atari, C=64), with no docs it's hard to tell.

>So, I guess the next question is--where might I purchase one of these
>cables? Or do I have to build it?

You can order one from B&C Computervisions (Sorry I don't have their number, but it is floating around this NG somewhere), or you can build one yourself, they are not that hard. On the video, just use the composite video output (you can use composite chroma, but it won't work on 800XL's) for color monitors, or for monochrome you can use composite luminance (this output has no color). On the computer end you need a 5-pin DIN male, the other end will be whatever your monitor uses. My Amdek Color 1 uses RCA plug for video, 3.5mm phone plug for audio, but most use RCA for both, so you will have to mark which is which. Use shielded cable for least interference.

Hope this helps.

That is actually 'Medium Density', just another name for Enhanced. In
some areas people call it medium instead of enhanced.

Got a Trak AT-D4. I originally paid $600 for it, I am willing to sell
it for $499. Let me know by e-mail. thanks.

Alternate Reality: The Dungeon was the greatest game ever made for the 8bit. The music, the graphics and the story plot were revolutionary for its time. Did they ever create an end to AR: The City? Also they were supposed make some more scenarioes to continute the dungeon.

That game had the most incredible introduction...

>the false claim =')

What is the false claim? Is there anyone in comp.sys.amiga.marketplace
selling Lynx development systems? Haven't you ever heard of value-added
retailers in Canada?

>(We also have ONE Amiga 2000 with 5M RAM, 51Meg HD, WB 1.3 and the development
>(system preloaded on the hard drive. It's only $400 + shipping with the

>comp.sys.amiga.marketplace for nomore than $175.00 and even that's
>pushing it. Heck, you might even get a monitor with it for an extra
>$25 or so.

Sure, go buy an Amiga from someone else - we will still help
you install the software on it. Since we only have one Amiga and four
Howard boards, people will have to get the other Amigas from somebody else.
It does sound like a good place to buy monitors too. But if you bothered
to read in the correct context, we aren't selling the Amiga as a stand-alone
system. Only as part of a package. For the person who wants a pre-installed
system (which looking at PC sales, there are lots of them), it makes sense
to offer one. And PC retailers do charge extra to install software and
make sure everything works together. We also checked with a local Amiga
dealer and he was selling Amiga 2000's for $400 each.

>(4. Units are ... sold "AS-IS".

>An "AS-IS" 2 grand investment? You'd have to be a fool to take one
>up on something like that.

And the people in comp.sys.amiga.marketplace are offering warranties on
their products? Ever buy a car from a used car dealer? The last one I
bought was for $7000 and had AS-IS marked on the sticker. What that
means in the US is that it has no express warranty. The buyer accepts

the fact that it might have some scratches and been used before. These units have been tested and do work. What does AS-IS mean in Canada?

> ///\ Thomas Clancy

the opinions expressed here are my own
the facts (claims) expressed here are true, not false

(I wonder why people in England and Canada have a hard time with people getting paid for an honest days work? Could it be their knowledge of American English and culture is lacking? Or are their morals really that different?)

If the cable you have is a 5-pin DIN it will work on both the C=64 AND the Atari, as the pinouts are the same. The 64 uses an 8-pin DIN receptacle, but those extra 3 pins are unused, and the 5-pin plug mates to it perfectly. I have a 64 in the attic, and have had it hooked up in place of my Atari with no problems.

(What is the false claim? Is there anyone in comp.sys.amiga.marketplace

They make it sound as if they are doing you a favour by over-charging
for an ancient machine. They said (basically) that you wouldn't find
it anywhere is for less (false). They might be offering a deal on the
lynx-only stuff... but they're taking you to thte cleaners on the
A2000 setup.

(selling Lynx development systems? Haven't you ever heard of value-added
(retailers in Canada?

Value-added? Bah! I call it taking advantage of those that don't know
any better. He he not claimed that a lower price could not be found,
I would not have posted the info.

(>They sure will. That 2k w/5MB 51MBHD an WB1.3 can be had in
(>comp.sys.amiga.marketplace for nomore than $175.00 and even that's
(>pushing it. Heck, you might even get a monitor with it for an extra
(>$25 or so.

(It does sound like a good place to buy monitors too. But if you bothered
(to read in the correct context, we aren't selling the Amiga as a stand-alone

Context? Go reread what you posted.

(system. Only as part of a package. For the person who wants a pre-installed

Yes, and you made it sound that since (and only if you're buying this
package) we'll throw in this dandy system for this real-good price.

(make sure everything works together. We also checked with a local Amiga
(dealer and he was selling Amiga 2000's for $400 each.

Because you neighbour robs banks doesn't justify the fact that you do
to. If you can't compete with the market, then pehaps you shouldn't
be in it.

(>(4. Units are ... sold "AS-IS".

(>An "AS-IS" 2 grand investment? You'd have to be a fool to take one
(>up on something like that.

(And the people in comp.sys.amiga.marketplace are offering warranties on
(their products?

Almost 100% of the people there offer DOA guarantees, alot offer 30 days
etc.. You'll never see gear valued at over $75 sold as-is (rarely).

(Ever buy a car from a used car dealer? The last one I
(bought was for $7000 and had AS-IS marked on the sticker.

Then you're crazy.

(What does AS-IS mean in Canada?

In my province, it means nothing. It means that if there was an
existing defect that the consumer wasn't warned about, then the
dealer is still responsible. Aside from that, according to law here,
you've 30 days (or was it 10) to cancel. That aside, practically
all used car dealers here offer 90 day warrantys =')

((I wonder why people in England and Canada have a hard time with people
(getting paid for an honest days work? Could it be their knowledge of
(American English and culture is lacking? Or are their morals really that
(different?)

Getting paid? Who has trouble getting paid? Hell, your country is the
one that doesn't seem to have the bucks to help th unfortunate (welfare).
I doubt there is such a thing as "american" culture (in the true sense
of the word). Morals seem to be different? - I'd say yes. Perhaps that's why
americans rank the highest in the world of "least liked" - the vocal few
that come off as egomaniacal/self-centered/the world should follow us
attitude.

As an aside, what does getting paid in Canada have to do with lack-of
knowledge of American "culture" and American english (if such a thing
exists)- is this yet another example of ego? I would have referred to
it as "New World" english (as does Webster's "New World" dictionary.

Wow, what digression... from lynx packages to culture... to getting
paid... to automobile warranties... morals. =')

Well, Terry......

Here in the sticks of the Bay Area of California, we haven't heard of the awesome Video 61. Frankly, their prices seem quite exhorbitant and I would be ashamed to use them as a guide. If you REALLY want to sell your aging stock, you should probably lower your prices 30% to 50%.

And you might also want to stop using the sob story. Though sad, it doesn't really enhance the sales pitch, nor does it make me wish to spend more for an item than it is worth.

Good Luck, for with these prices, you will need it.

Sean Weber

376. Atari 8-bit ROM

380. Operation Barbarossa (old Atari game)

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-13 00:00:00 UTC
From: The Yum Yum Boy <toby.douglass@ebo.mts.dec.com>
Message-ID: <32DAB66B.819@ebo.mts.dec.com>
Source record: 77003

Hi :-)

Many years ago (feeling my age now :-) a cousin of mine had an Atari 8-bit machine. I can't remember the exact type, only that it loaded from an internal tape drive (normal music style cassettes) and had a keyboard. One of the games he had was called, if I remember correctly, "Operation Barbarosa", and was a military stragetic sim of the WW2 invasion of Russia.

I would -dearly- love to play this game again. Of course, to do this, I need to find out what machine my cousin had, if an emulator exists, and if this game is available for FTP.

Could you help, please?

The Yum Yum Boy...

>I was a little surprised when I picked up an Atari 800 last year and found
>it only had an RF output on it--no composite or custom higher-quality
>video out, like many of its contemporaries.
>
>Did later 8-bit models add higher-quality video and audio output?
>
The 5-pin DIN is in fact a composite port: chroma, luminance and sound. The 400 had no composite port, nor did the 600xl. The other models did. Take a look at Atari Classics 2/6 for more info on Atari video.

386. Converting ATRs

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-13 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <32daccad@pianosa.demon.co.uk>
Source record: 77009

Whilst reading the usual rubbish I find here, I wrote something interesting to
Bob Malay - Loral - X7750 about Converting ATRs:

Hello Brad,

BML>> I'm sure that this question has been asked before - sorry for that,
BML>> but how can I convert an ATR for use with a real Atari 8bit using only
BML>> an 8bit - no PCs, no emulators.
BR> ATR2DSK.BAS, I have it here. I've never used it yet, but it was sent
BR> to me uuencoded by somebody who's name I no longer recall.

As there has been a certain amount of interest generated by my reply to Bob's
request, and at the suggestion of Alan Sharkis, I've posted a copy of
ATR2DSK.BAS in uuencoded form, to alt.binaries.atari.

So, if any of you other people want it, look for it there.

>

Since this is being brought up, I might as well ask this again
to see if things have changed (I asked this many years ago)

What is the current legal status of the OS ROM's for the Atari 8-bits?

That emulator he's referring to could be mine, or it could be someone
else's, I don't know. But I do know that I'm distributing mine in
source code form, but without the OS ROM's (or BASIC ROM's, or any
other actual Atari software) to avoid legal complications.
Back when I first wrote it, I had a lot of people
(including Derek Mihocka) tell me that it would be illegal to distribute
the ROM with my emulator.

So, has this changed by now? Are other people giving out the ROM
with their emulators, or is everyone on their own?
(I haven't had time to check out the other emulators recently)

: >
: > Steve.

: The recommended cleaner for Atari disk drives heads is 91% Isopropyl
: Alcohol. Many drug stores sell it for $1.00 for a 16oz bottle. Do not
: use the more common 70% to 80% Rubbing Alcohol. The 70 to 80% Rubbing
: Alcohol often contains other things besides Alcohol and Water and can
: leave an oily residue.

Believe it or not, I cleaned the heads right before the drive started
having problems. I did use 70% isopropyl so that could be the cause of
the problem. But I also cleaned my other 2 1050s this way and they both work
fine. I'll go pick up some 91% alcohol and clean it again and see if that
helps (I hope so). If not, I sure won't put any non-write-protected disks
in it.

Thanks for your help,
Justin

401. 7800 and Maria Signals

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-14 00:00:00 UTC
From: malay@tds-gn.lmco.com
Message-ID: <5bgdjl$t19@news.tds-gn.lmco.com>
Source record: 76928

When using the Maria video signals off the 7800's expansion port (I'm trying to get composite video working) - I only see a picture when using a 7800 cart - when using a 2600 cart I get no picture but I can tell the game is running - sound works.

Are the Maria signals only for the 7800 "system"?

402. Mystery stuff...

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-14 00:00:00 UTC
From: "Matt K." <mkozak@clam.rutgers.edu>
Message-ID: <Pine.GSO.3.94.970114131854.25707A-100000@clam.rutgers.edu>
Source record: 76929

I've been getting back into the classic stuff, but mostly hanging out in the c64 newsgroup; however, the other day I bought a load of stuff at a yard sale and hoped someone here could tell me what it is:

1. Power Supplies: one black rectanglular w/ a 7 prong female cord, part#C070099
one little black box with 7 prong male cord, part #C061982, seems to fit the 800xl I bought; it gets warm when plugged in, but the CPU power light doesn't come on...
one rectangular, but smaller than the one listed above,5 prong female cord, I was told it goes to the SF354 drive, but what Atari CPU is that drive for?

2. SC 1224 Monitor with 13 prong male cord and an RF? cord coming out of the hole for the horizontal hold(white). Is it color? What CPU does it work with? It looks similar to the casing design of the SF354.

3.And wierdest of all...an Atari model"C240 Video Music" thing. It looks like an on old piece of stereo equipment, with L and R RF? inputs and an RF cable coming out. It also has a strange shaped power cord with "Atari" on it in silver letters. The front has silver dials and push buttons which go from dark brown to brown to orange to yellow(power button). Any ideas? From the words near the buttons (shape, auto, hole) it seems to be something that would show funny graphics on a TV when music is played through it, but I don't see where the cables would go...

Sorry for this info. overload, but I'm at a complete loss and no one in my area (that I know of...) has been able to help (they're Commodore or Apple II people).

Thanks!

No, still hasnt changed. Apparantly, xformer is the only one that
comes with the ROMS, and they can still work with everyone elses.
Since Darek can't prohibit you from using ROMS (especially if you own
a real 8 bit or two!), just d/l the demo version of xformer, it
includes them, and copy them to the appropriate directory.

Source record: 76931

Hi,

The Wico trakball is a fairly common item, but still worth a decent price, you can probably get as much as $10 for them each.

As for your cords, its sounds like you've got a couple of Y spliteers to attach multiple joysticks, trakballs, etc... and the other maybe be a splitter from your 5 pin DIN port to go out to speakers for audio, just some cool connectors, nothing special, but definitely cool.

Curt

Message-ID: <32DBC572.446B9B3D@fir.fbc.com>
Source record: 76933

Hi,

I'm trying to get feedback from owners of Atari 1090XL expansion systems. I currently have 2 projects which are close to complete (approxiametly 3 months)

1. The 1090-IDE interface. I fully functional IDE interface that will allow you to boot from any of D1: - D9: drives from an IDE hard drive. The card will be accessible from both an external connector or internal*

* note: I'm considering an internal mounting kit for a 3" IDE drive with bracket and power connector, this however is not until after I get some feedback.

2. Project number 2 applies to all Atari 1090XL owners who would love the one item they truly want for their expansion box: A COVER!!!!
I have a cover and I am having a machine shop measure and reproduce these cover which will be spray painted with the rough off white paint coat that the original covers would have had.

NOTE: I will only be planning on producing about 1 dozen of each product. Cost is expected at about $60.00 for the IDE interface (hopefully with an internal mounting bracket) and $15.00 for the Covers.

407. cable

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-14 00:00:00 UTC
From: Jim Treber <jtreber@cris.com>
Message-ID: <32DC19C3.191E@cris.com>
Source record: 76934

Among the few left over 8 bit items I have, I found an unused cable about 3 feet long. At one end is a round connector with with 8 pins inside. The other end has 3 separate plugs similar to RCA jack plugs, a red one, a black one, and a slightly smaller white one. Does anyone know what this is or have a use for it?

Jim Treber

408. For Sale: AMDEK 3" Dual Drive

That last one is for a disk drive that works on the Atari ST computer.
It's the Atari counterpart to the Amiga if you're wondering :)

The other ones I am not sure about though they may be for the ST if they
are packaged in the same box.

>2. SC 1224 Monitor with 13 prong male cord and an RF? cord coming out of
> the hole for the horizontal hold(white). Is it color? What CPU
> does it work with? It looks similar to the casing design of the
> SF354.

Again, it's for the ST. The SC 1224 monitor,which is what I have, is a
RGB color monitor and it's much more sharper than using a TV.

It's the Atari Video Music machine. :) You plug in your stereo in the L
and R jacks and it shows the music on the TV. Quite a rare find it is.
Only other device that does that is the Jaguar CD-ROM drive with bulit in
Virtual Light Music which uses CD's only. Hope this helps...

> > BML>> an 8bit - no PCs, no emulators.

Iï¿½ve made a Image extractor for use with Sparta/BW-Dos.
It can extract SD/ED ATR or XFD Files.
Note File-size must be
92176 or 133136 bytes (ATR) bzw.
92160 or 133120 bytes (XFD).
It shows a short explanation by starting without parameters.
Itï¿½s located in the Utilities-disk at my homepage in the download area.

V1.00 is free for use, please send me a postcard, if you like it.
BTW - If someone wantï¿½s to upload it to UMICH - fell free.
I tried it with no success.

Matt

Unless Atari has done as some companies (most notably British ones) have done with their 8-bit OSes, it would still be technically owned by the owner of the Atari properties, JTS.

Whether or not they care, I don't know. My guess is no, but...

>through legitimate means.

Problem is, most all the commercial software is already available on the various pirated software archives. Thanks to them, who's going to pay ANYTHING for 8-bit Atari software, knowing they can just download it off the net. People around here DEMAND their free warez, like it's their god-given right that all old commercial software should now be given to them for free, since they successfully waited for the market value of that software to drop to about zero. And what's driven the market value of 8-bit Atari software to approximately zero? Why, the availability of it all for free!

Your proposal could only work if the various pirate archive maintainers agreed to remove software made available legally through the "clearinghouse." But most of the commercial software on their archives IS available legally, from various commercial sources still trying to sell it, and on the used market. I highly doubt they would remove them from their archives just because ANOTHER legal source was available.

In a normal marketplace, the rare items in high demand (Bounty Bob Strikes Back, etc.) would bring in higher prices on the used market. But thanks to the pirate software archives, that softare isn't worth anything. You've read the arguments here, prices more than a couple dollars are generally considered outrageous. Never mind how common/rare it is, never mind the level of demand. The value of all 8-bit Atari software is being finalized to zero, thanks to the pirate software archive maintainers and supporters.

>mcurrent@carleton.edu

Michael, if you can round up 25 subscribers to start, and some
contributers,
I'll happily add Atari 8-bit support. Will be 2-4 pages to start, but as
subscriptions come up content would also. I'll have to assume the content
is
correct, as I have only a limited knowledge of Atari 8 bits. I would
definitely be interested in BASIC programs and hardware subjects. Maybe we
can do some comparisons between the CoCo and Atari, not to determine any
kind of superiority, but to familiarize readers with the differences and
similarities. A history of Atari 8 bits would be good also.

Think you can get 25 Atari 8 bitters to "risk" $24 each? All I ask of my subscribers is that they support me with subscriptions and articles. The hardware articles (someone made a scanner that used a printer for an Atari 8
bit once) are especially interesting, as they can be modified for the other
platform.

: (Looking at port)

: 1 5
: 2 4
: 3

: 1) Audio out (line level)
: 2) Composite Chroma
: 3) Signal ground
: 4) Composite Video
: 5) Composite Luminance

This is very similar to the port on a Commodore 64 (or 128):

Audio/Video
Pin Type
+-------+----------------------+
1	LUMINANCE
2	GND
3	AUDIO OUT
4	VIDEO OUT
5	AUDIO IN
6	CHROMINANCE
+-------+----------------------+
++ ++
/ +-+ \
/ \
+ +
| 6 |
|3O O O1|
| |
+ O O +
\5 O 4/
\ 2 /
+---+

Apart from pin 6, the connector is the same, as are pins 1 (5, on your chart), 2 (3), 3 (1), and 4 (4). I have a cable (it came with an old monitor) which will work with either system; it omits pin 6 and connects composite video and audio to RCA plugs.

From: Ron Fries <rfries@tcmail.frco.com>
Message-ID: <32DC18C0.B9B@tcmail.frco.com>
Source record: 76945

I've just released V1.1 of the TIASOUND Emulation Library for the Atari Television Interface Adapter (TIA) chip used in the Atari 2600 VCS. The changes from V1.0 are minor but do improve the sound quality. It can be downloaded from:

ftp://members.aol.com/atari800xl/TIASND11.ZIP.

I have a few other ideas I may implement as well, but I wanted to get this fix out now.

I will also be releasing an update (V1.2) to my POKEY Sound routines in the near future as a similar problem exists. A V2.0 version which supports multiple POKEY chips (mainly useful in Arcade emulators) is in the works as well.

421. BOOK: Interviews with Classic Game Programmers

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-14 00:00:00 UTC
From: jhague@dadgum.com
Message-ID: <jhague-1401971914310001@dialup48.blarg.net>
Source record: 76948

I'm the author of the "Giant List of Classic Game Programmers" available at http://www.dadgum.com/giantlist.html.

Since 1995 I 've been talking with many of the people on that list for a book currently titled _Halcyon Days: Interviews with Classic Computer and Video Game Programmers_. The people included range from the well-known to the obscure; some names sure to ring a bell are:

Jeff Minter (Gridrunner, Sheep In Space, Tempest 2000)
David Fox (Rescue on Fractalus)
Phil Price & Gary Gilbertson (Alternate Reality)
Warren Robinett (Adventure)
Bill Budge (Raster Blaster, Pinball Construction Set)
Tim Skelly (Rip-Off, Armor Attack, designer of Star Castle)
Ed Rotberg (Battlezone, Blasteroids, S.T.U.N. Runner)
John Harris (Jawbreaker)
Doug Neubauer (Star Raiders, Solaris)
Danielle Berry (M.U.L.E., Seven Cities of Gold)

Plus fifteen or so other programmers of classic games for the Atari 2600, Atari 8-bit computers, Apple II, Commodore-64, and other systems. Even for a trivia hound like myself, the amount of new information is staggering. Do you know...

-What lousy Vic-20 game inspired Jeff Minter to start Llamasoft?
-What creature Warren Robinett removed from Adventure?
-What part George Lucas played in the development of Rescue on Fractalus?
-What famous Atari 800 game was programmed in a backwoods cabin, using the car battery of a Jeep for power?
-What Star Raiders/Solaris follow-up was written by Doug Neubauer for the NES?
-What kinds of programming tricks were used to pull off impossible feats like Electraglide?

The point isn't the trivia, though; it's hearing the stories and the inside information and what went on inside the heads of the people who wrote the classic games we remember so fondly.

Halcyon Days should be available within the next six weeks. To receive advance notice, reply to this posting. There are a few surprises I'm not letting out of the bag yet, either (collectors of classic game paraphenalia take note!).

Here's the technique! (I've told 5 people this today so I guess I'll make it public!) :) This is how I transferred Atariwriter stuff to Word for Windows. Have one single density drive and one true double density drive (you'll need a DOS that supports true double density as opposed to dual density). Copy the files from the single to the double. Stick the doubles in the IBM. I have two programs: Atario and Util. Both will copy files from the Atari disk to an IBM disk (hard or floppy). Only text files will actually be usable obviously. If you want a copy of Util or Atario, let me know...

```
Did you hear anyone say "Goodbye"?
==================================
by Donald A. Thomas, Jr. (10/4/96)

It's odd to imagine an institution, which was as big and as powerful as
Atari
once was, to have been shut down in recent days. The real amazement for
me is
that it was all accomplished without a measurable flinch from within or
outside
the gaming industry. I can understand that gamers wanted to push Pong
out the
door early in the timeline. I can appreciate that the classics such as
Missile
Command and Asteroids do not push 32-bit and 64-bit systems to any
technological
limits. I know all these things intellectually, but the heart cannot
face the
truth that the world and the corporate machine known as Atari could not
find an
amicable way to coexist.

On Tuesday, July 30, 1996, Atari Corporation took each and every share
of it's
company (ATC), wrapped them all in a tight bundle and presented them to
JTS
Corporation; a maker and distributor of hard disk drives. On Wednesday,
the
shares were traded under the symbol of JTS. Within a few weeks, the
remaining
staff of Atari that were not dismissed or did not resign, moved to JTS'
headquarters in San Jose, California. The three people were assigned to
different areas of the building and all that really remains of the Atari
namesake is a Santa Clara warehouse full of unsold Jaguar and Lynx
products.

It was only as long ago as mid '95 that Atari executives and staff
believed
things were finally taking a better turn. Wal*Mart had agreed to place
Jaguar
game systems in 400 of their Superstores across the country. Largely
based on
this promise of new hope and the opportunities that open when such deals
are
```

made, Atari invested heavily in the product and mechanisms required to serve the
Wal*Mart chain. But the philosophical beliefs of the Atari decision makers that
great products never need advertising or promotions, put the Wal*Mart deal
straight into a tailspin. With money tied up in the product on shelves as well
as the costs to distribute them to get there, not much was left to saturate any
marketplace with advertising. While parents rushed into stores to get their kids
Saturns or PlayStations, the few that picked up the Jaguar were chastised by
disappointed children on Christmas day.

In an effort to salvage the pending Wal*Mart situation, desperate attempts to
run infomercials across the country were activated. The programs were
professionally produced by experts in the infomercial industry and designed to
permit Atari to run slightly different offers in different markets. In spite of
the relatively low cost of running infomercials, the cost to produce them and
support them is very high. The results were disappointing. Of the few thousand
people who actually placed orders, many of them returned their purchases after
the Holidays. The kids wanted what they saw on TV during the day! They wanted
what their friends had! They wanted what the magazines were raving about!

In early 1996, Wal*Mart began returning all remaining inventory of Jaguar
products. After reversing an "advertising allowance" Atari was obligated to
accept, the net benefit Atari realized was an overflowing warehouse of inventory
in semi-crushed boxes and with firmly affixed price and security tags. Unable to
find a retailer willing to help distribute the numbers required to stay afloat,
Atari virtually discontinued operations and traded any remaining cash to JTS in
exchange for a graceful way to exit the industry's back door.

Now that JTS has "absorbed" Atari, it really doesn't know what to do with the
bulk of machines Atari hoped to sell. It's difficult to liquidate them.

Even at
liquidation prices, consumers expect a minimal level of support which
JTS has no
means to offer. The hundreds of calls they receive from consumers that
track
them down each week are answered to the best ability of one person.
Inquiries
with regard to licensing Atari classic favorites for other applications
such as
handheld games are handled by Mr. John Skruch who was with Atari for
over 13
years.

In spite of Nintendo's claim that their newest game system is the first
64-bit
game system on the market, Atari Corporation actually introduced the
first
64-bit system just before Christmas in 1993. Since Atari couldn't afford
to
launch the system nationwide, the system was introduced in the New York
and San
Francisco markets first. Beating the 32-bit systems to the punch
(Saturn/PlayStation), Atari enjoyed moderate success with the Jaguar
system and
managed to lure shallow promises from third-party companies to support
the
system. Unfortunately, programmers grossly underestimated the time
required to
develop 64-bit games. The jump from 8-bit and 16-bit was wider than
anticipated.
In addition, Atari was already spread thin monetarily, but were required
to
finance almost every title that was in development.

After the initial launch, it took Atari almost a year before an
assortment of
games began to hit store shelves. Even then, having missed the '94
Holiday
Season, many of the planned titles were de-accelerated to minimize
problems
caused by rushing things too fast. Consumers were not happy and
retailers were
equally dismayed. The few ads that Atari was able to place in magazines
were
often stating incorrect release dates because that information changed
almost
every day although magazines deadline their issues up to 120 days in
advance.

It was in 1983 that Warner Communications handed Jack Tramiel the reins
of

Atari. By this time, Atari was often categorized as a household name, but few households wanted to spend much money on new software and the systems were lasting forever. No one needed to buy new ones. That, combined with Warner's obscene spending, amounted to a *daily loss* of over $2 million. Atari was physically spread all over the Silicon Valley with personnel and equipment in literally 80 separate buildings; not considering international offices and manufacturing facilities. Mr. Tramiel took only the home consumer branch of Atari and forced Warner to deal with the arcade division separately. Within a few years, Jack took the company public, introduced an innovative new line of affordable 16-bit computers and released the 7800 video game system.

To accomplish these miracles for Atari, Jack implemented his "business is war" policies. While people who publicly quoted his statement often felt that policy meant being extremely aggressive in the marketplace, the meaning actually had closer ties to Tramiel's experience as a concentration camp survivor. Of the 80 buildings in Sunnyvale, Santa Clara and Milpitas, almost every one of them were amputated from Atari's body of liabilities. The people, the work, the heritage, the history were fired or liquidated. Those who survived were unsympathetically required to fill in the gaps and while most tried, few actually found a way to be successfully do what a dozen people before them did. Atop the mountain, Jack pressed with an iron thumb. All Fed/Ex mailings were required to be pre-approved by one of a handful of people. "Unsigned" purchase orders went unpaid regardless of the urgencies that inspired their creation. Employees found themselves spending valuable time trying to find ways around the system to accomplish their jobs. Many of them lost their jobs for bending the rules or never finding a way to make things work. As horrible as it all sounds, it actually was the only way

to protect Atari as a company and give it a chance to survive as it did and did
very well.

Jack's introduction of the 16-bit computer was initially hearty in the United
States but it went extremely well in Europe. Europeans were not accustomed to
"affordable" technology and although the Atari computers were not IBM
compatible, it didn't matter because people could afford them. Jacks' private
laugh was that the computers were sold at prices much higher in Europe than
Americans were willing to pay. As a result, most of the machines made were being
shipped to European destinations to capture the higher margin. This enraged the
people in the United States that had been Atari loyalists. While waiting months
for stores to take delivery domestically, international magazines were touting
ample supplies. Those in the know within the U.S. became dismayed. The remainder
never knew Atari was slowly abandoning the value of Atari's name recognition as
it became easier and easier to forget some assuming Atari had long filed for
bankruptcy.

On a technical level, Atari 16-bit computers were designed beyond their time.
For less than $1,000, consumers could enjoy "multimedia" before the phrase was
ever really widely used. The icon-based working environment proceeded Windows
popularity although the essential attributes of the two environments were very
similar. MIDI was built-in and became an instant hit in the high-end music
industry. Tasks were activated and manipulated with a mouse and the system
accepted industry standard peripherals such as printers, modems and diskettes.

With all the genius that went into the technology of the machines, very little
of equivalent genius went into the promoting and marketing the machines. Mr.
Tramiel was the founder of Commodore Business Machines. When he introduced the
PET computer in 1977, Jack discovered he didn't have to call a single

publication. Instead they all flocked to his door demanding an opportunity to see the product. News magazines. Science Journals. Business newsletters. Newspaper reporters. They were all there with microphone, camera and pen in hand. And they kept coming back. Adding a switch, announcing a new 4K application or signing a new retailer were all big stories the press wanted to handle.

Today, a new video game announcement may generate a request from any of the dozens of gaming magazines for a press release, but a lot of costly work has to be done to assure fair or better coverage. Editorial people are literally swamped with technical news. Samples are mailed regularly to their attention. Faxes fly in through the phone lines and e-mail jams up their hard drives. It takes a lot to grab their attention.

While Atari retained hopes to be successful with the Jaguar, Atari's marketing people were fighting established standards in the industry with severe handicaps. Since cartridges (the Jaguar was/is primarily a cartridge-based system) were so expensive, editorial people were required to return them before new ones would be sent. Editorial people like to assign review projects. So finding cartridges they sent out was not always easy to do. Additionally, reviewers often love their work because they get to keep what they write about. Regardless, the few magazines willing to cover Atari products were more often turned away because of a lack of programmable cartridges or any number of other indecisive barriers. In-store signs and posters were sometimes created, but many retail chains charge premiums to manufacturers that want to display them. Some direct mail campaigns were implemented, but Atari often could not afford to keep those things being advertised on schedule. Therefore, the advertisements were published and distributed, but the product was not available.

Clearly, Jack's experience with the world beating a path to the door of a

company making a better mousetrap no longer applied. The world had revolved a few times beneath him and he never noticed. The tactics used to successfully sell Commodore computers were simply antiquated notions from the past. Meanwhile, Sony launches the PlayStation with over $500 million in marketing funds. Today, the PlayStation is considered the most successful next-generation gaming machine throughout the world. Sony bought the market. Tramiel's Atari never learned how to do that. Actually, they never could afford it anyway.

After the 1990's got underway, Europe as well as the rest of the world, discovered that IBM-compatible computers were becoming more powerful and more affordable. The world always did want computers at home just like in the office and companies like Dell and Gateway exemplified the industry's trend toward home-based office computers. As a result, companies like Commodore, Atari and Next couldn't compete any longer. While the dedicated user base of each of them felt abandoned by these companies having to leave the computer market, the inevitable prevailed. Commodore jumped ship, Next changed business goals completely and Atari invested what they had left in the Jaguar game system. Even today, Apple is kicking and screaming. As good as Apple was at creating a huge niche for themselves, they focused more heavily on education. When kids grow up and get jobs, they want business machines. IBM was always the business standard.

When one examines the history of Atari, an appreciation can grow for how many businesses and people were a part of the game over the years. Chuck E. Cheese Pizza was started by Atari's founder, Mr. Nolan Bushnell. Apple Computer was born in a garage by ex-Atari employees. Activision was founded by Ace Atari programmers. The list goes on and on.

But for some pathetic reason Atari's final days came and went with no tribute, no fanfare and no dignified farewells. Why? Where did all the talent go? Where

are all the archives? Where are the vaults? Where are the unpublished games and
where are the originals of those that were? Why has no company stepped forward
to adopt the remaining attributes Atari has to offer? Where are the creditors?
What has happened to all the properties and sites? Where are the databases,
warranty cards, promotional items, notes on meetings, unanswered mail? Who owns
P.O. Box 61657? Who goes to work in Atari's old offices? Where do consumers have
their systems fixed? Who is publishing new games? Who still sells Atari
products? Why are there still a lot of people talking about Atari on-line?

I'm an ex-Atari employee and proud to have been. I'm still an Atari devotee and
proud to be. To me, these are questions which all deserve an answer, but who
will ask them?

The best people to ask these questions are those who have exposure to the
public. If you believe Atari left us without saying goodbye, contact Dateline at
dateline@nbc.com. If you REALLY believe, then send this article to 10 of your
friends in e-mail. AND if YOU REALLY, REALLY believe, mail a few to newspapers
or other news programs. A letter in your own words would be great!

I'd spend money for a thorough retrospect on Atari. Wouldn't you?

Wouldn't it at least be nice to say "Goodbye"?

What was the expansion slot on the 130XE used for? Are there any products available today that take advantage of it?

Also, what type of monitor will fit into the monitor port of the 130XE?

Thanks for the info.

-Thomas

427. Atari LYNX

What is the current status of Atari Lynx?

Last time I saw a commercial for it, it looked pretty hot. A hand held colour game system with awesoem sound. I don't know who was producing games for it though. (nor do I know what hardware/softwar package is used to make a Lynx game) Anybody out there can provide details?

Alan

Hi,

>>Access to cartridge prototyping, production, packaging, & marketing included.

And how many Lynx games have you produced, packed and marketed? (I'll point out now that I haven't done any myself, just so Harry can't say that in return.)

Yeah, but it's a lot easier finding someone to repair a broken car... ;-)

: Anyone know?

The problem with Ortman is that he doesn't understand that the prices have gone down, as he's selling them with prices that are way too high. The entire lot he has can easily go for around maybe $200. I tried offering him just that much awhile ago, but he flamed me to a crisp with bullshit and then some. Someone's got to get to him to tell him this.

Ah, yes. I remember it, the actual title was Eastern Front 1941. Started
out as an APX (Atari Program eXchange) title, then Atari re-released it in
a cartridge. I had the original tape, and fortunately I was able to
transfer it to a boot disk before the tape was eaten by a hungry 410
recorder. The DOS file conversion (crack?) is still floating around on
some Atari BBS's (what few are left), if you can't find an original...

>
>

Brad, I tried the program. It's mighty slow, but it works. I'm giving
the listing to a TurboBasic expert at my next user group meeting to see if
it can be speeded up.

The program successfully decoded an .ATR of an Ol' Hackers Newsletter disk
that I null-modemed from my clone to my Atari, although it reported an
error 136 at the end. It did _NOT_ successfully decode an .ATR of a game
with defeated copy-protection, and reported an error 8, as I would have
suspected. It's still a useful program, but it obviously won't work on
everthing.

There is an updated version of UTIL which can both read AND write to
an ATARI double density disk. It will convert text files
ATASCII-->ASCII and back, and you can also copy BINARY files as they
are, not like in the previous version where the files get converted
anyway. Have a squiz at my WEB page if you need it.

Don,

Very well written article. I first got aboard the Atari wagon in 1976 or so with the VCS .. then sold it and in 1980 got the Atari 800, my first computer, which I used to get through some college 'basic' programming classes, even though we were using IBM's then .. I could write my programs in OSS Basic XL, then convert it "on the fly" in the classroom ... I was always the 1st one done with my programs .. got A's in both classes too. Over the years, I've had many Atari computer systems, even had an ICD Multi I/O system with 1meg MIO and a 40meg HD, along with the 320k 130xe and the xf-551 dual system (which had a 3.5" 720k floppy).

Now, I'm using a PC, like most people. I still have my original 800 set up at home, as well as a 130xe. Somehow, I can't bring myself to put them away. I suppose I will, one day.

You're right. It WOULD have been nice to say, "Goodbye"!

Bill

I've been lurking a lot lately (mainly because (a) I started a new job not too long ago, and (b) my 8-bits are in storage until I finish the renovations to the basement of my house), but I defy anyone to point me to a dictionary entry for the word "irregardless". This word is right up there on my top ten list of things which annoy me no end, like fingernails on a blackboard, or cats (sorry, Blackat :-).

Ob Atari note: I am still looking for a number of Infocom games with all the accompanying goodies. The list includes:

Zork 2
Zork 3
Sorcerer
Spellbreaker
Witness
Suspect

If you have any original copies of these games for sale, please let me know. Thanks.

I just picked up a Commodore 1701 monitor and haven't tried to do much with it yet. It has a choice of inputs. Either Chroma/Luma/Audio or Video/Audio. I have heard some about the 1702 (in the most recent FAQ) but not this model. Does anyone know if this will work with the 8-bit as well? Also I read somewhere that the Commodore Chroma should be connected to the Atari Video -- is this right?

(Pardon paraphrase, esp. if incorrect)
(M. Current expresses belief that internet 'pirate' sites and other sources of free A8 software interfere with the few remaining vendors' sales.)
I suspect B&C, Toad, Amer. Tech., Ben Smith and others are getting increased sales due to remaining interest in A8, not decreased sales. But that isn't my point.
A. There is a finite amount of 'legit' commercial software. (It gets copied and commercially sold, like 'AstroGrover' I bought recently, but not with the full original concept, eg. the keyboard overlay, but that's another point.) Sooner or later, there is an end to 'legit' commercial software.
B. There is a finite lifetime for commercial software, esp. the copy protected type.
C. My point, I think A8 software should be archived, like books, tapes, records, vhs tapes, films, art photographs, etc.
If we, us, don't archive A8 software then that software will be lost. Of course, that may be the theory behind computer hardware and software becoming obsolete in six months to a year, keep the consumers needing new stuff. I believe A8 software deserves to be archived. Who else is going to do it? Is M. Current's library going to purchase commercial software, or even provide space for donated A8 software? The Boston Computer Society archives other platforms, but not the A8 AFAIK. All copyright issues and protecting vendors aside. Who's going to preserve A8 stuff if we don't? I think A8 stuff deserves to be preserved.
The plans to the A8 were sold with a VAX that got erased, in my opinion that's a crime, or at least a shame.

Did they ever create an end to AR: The City? Also they were
> supposed make some more scenarioes to continute the dungeon.
>
> That game had the most incredible introduction...

According to the documentation of AR: The City, there were supposed to be several more chapters to the series past The City and The Dungeon, all of which would allow you to reintegrate your advanced character into the earlier chapters to buy equipment, gain experience, etc.

Unfortunately, the only two chapters that were actually released were The City and The Dungeon. Atari users are fortunate, b/c not even those two made it to all the systems.

Did the same thing to me... If you run it under Win 95 it should
take care of that. If you don't have Win 95, I think the problem
is with expanded memory managers (I use old QEMM for some of my
boot disks). Try using "HIMEM.SYS" as your memory manager...
I made a "bare minimum" boot disk (sound card drivers, mouse
driver) with HIMEM and it ran fine (still can't get the sound
to work though).

> him just that much awhile ago, but he flamed me to a crisp with bullshit
> and then some. Someone's got to get to him to tell him this.
> =

The problem is much wider than that....

Ortman lists an address of Decatur, Illinois. I moved to Peoria, Illinois =
from the United Kingdom just =

over six months ago. Back in the UK, a working 800XL would be lucky to fet=
ch =A315, a 1050 drive maybe =A320
and even something really rare like a PAL 1200XL sold for just =A350 at the=
last Alternative Micro Show. =

Heck, even a reconditioned, cleaned up 1050 with a limited warranty from At=
ari support specialist Derek =

Fern were going for less than =A350, and I think that was complete with pow=
er pack and SIO lead.

Here in Illinois things are very different. To quote a couple of examples f=
rom the local ads-paper just =

before Christmas:

Tandy TRS-80 - $80
Clone XT with keyboard, 20MB hard disk but no monitor - $150
Atari 800 with 810 drive and some software - $350

At the local used computer stores things are even sillier: =

Intel 486DX/2 66 CPU - $80
Commodore 1701 monitor - $150
IBM 8513 VGA monitor - $199
Apple Laserwriter - $399

And these prices are by no means the exception, as we are expected to pay e=
qually outrageous sums for used =

(often very used) televisions, automobiles, furniture... in fact just about=
everything. It's almost as if =

the residents of Central Illinois believe the economic laws of depreciation=
don't apply to them.

Please! - don't just regard it as your right, but your duty to comment on t=
hese ridiculous prices and =

maybe, if we're really lucky, the folks around here will eventually get the=
message.

Just my $2 worth :)

Graham.

PS. If anyone knows of a really good computer store in Chicago or Downstate=
Illinois (sort of like a Fry's =

would be nice), please please let me know.

i have a question regarding transfering disk images (.atr's) to real
atari disks.

i have run across a few that seem to transfer to a disk, yet when i
boot i either get a lock-up or garbage. i've tried including dos
files on the disk in the case that they were binaries, however i
still have had no luck.

other images transfer just fine. all the images work beautifully, so
long as they are booted under ape or sio2pc.

i would like to keep them on 5 1/4 though.

should i use a sector copier? if so which one?

i have tried the 'j' copy disk option under mydos, and 'superdup'
under young's dos.

anyone?

thanks,
robert

ps. one particular file is atari home file manager :)

PLEASE don't start that US vs Canada stuff here. It has infected half
of the NG's on the USENET. If we're intelligent to use Ataris then we
should be smart enough not to turn our Atari related NG's into yet
another corner of the America vs. Canada flame wars.

464. Any Atari Groups in Texas?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-15 00:00:00 UTC
From: antbbaker@aol.com
Message-ID: <19970115031600.WAA19762@ladder01.news.aol.com>
Source record: 76960

I have a Macintosh PowerBook 5300cs but I still LOVE my Atari's that I have. Anyways, if anyone knows of an Atari group in Texas please E-mail me.

Long live the Atari owners! We may have new computers now but we'll never scrap that Atari!!

E-mail:AntBBaker@AOL.com
or on AOL
AntBBaker

465. 1050 anyone?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-15 00:00:00 UTC
From: antbbaker@aol.com
Message-ID: <19970115031200.WAA19658@ladder01.news.aol.com>
Source record: 76961

I was wondering if anyone had a 1050 disk drive. I was fooling around with my old one trying to see if I could put a Meg in it and hook it up to my Macintosh PowerBook 5300cs and it was fried. It sure sucks having an 800XL without a disk drive. E-mail me if you have one.

oops - darn mouse!

tried running XLit, setting up the samples subdir and everything, just
like in docs...
it does nothing but one long beeeeeeeep, and the system hangs.

any info why?

Mike

467. FS: Atari 1050 disk drive

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-15 00:00:00 UTC
From: Tony Ramos <ramos.15@osu.edu>
Message-ID: <32DC65CD.7D60@osu.edu>
Source record: 76963

The original buyer has disappeared, so I'm offering this up for
sale again.

One unmodified Atari 1050 disk drive in good condition, with power
supply and SIO cable. Best offer over $20 (plus shipping) in the
next 7 days takes it.

I also have a couple of Atari 800 computers and an 810 drive. Does
anyone want these beasts enough to pay shipping?

The 5-pin DIN plug will actually work on both systems. I used my C=64 with the same cable with no trouble at all.

But I STILL prefer my Atari, even though I give Commie a SLIGHT edge in graphics capability (multicolored text)....

Lionel Theunissen <lionelth@ozemail.com.au> mumbled indistinctly:

>> All this can be had for only $2000 + shipping each. You won't find a
>> better offer anywhere in the world! Atari charged developers $5000 for
>> these units but you get one for less than 1/2 the price.

A comparison is in order here:

A third party Jaguar dev kit is approx 300.00 (uk).

An SNES third party dev kit is around 350.00 (uk).

The Sony Yaroze Playstation home dev kit is 550.00 (uk), and includes
rather a lot of stuff for the money - assembler, C compiler, debugger,

developer PSX, libraries, documentation, free Pipex account, 3d
object creators, graphics convertors, loads of utils, etc. Available
direct from Sony only.

I could quote retail on a full-blown pro Playstation dev kit, but my
licensing agreement with Sony prohibits it - all I can say is that
it's a bit more than that ;)

Datel were selling a system that would stand in for a full blown
dev kit for around the 200.00 (uk) mark.

I can say what 3rd party pro-dev kits for a Saturn cost, and it's
around the 5000.00 (uk) price by the time you've bought everything
you need.

I think, on reflection that the $2000 for a Lynx dev kit with no real
probability of a market for product from it is a bit steep.....

I've got a Vectrex dev system that I put together myself
- bet there's even less of a market for that, but I know of at least
three new games that have been released just recently. Fact is
that folks only do old platforms for fun and nostalgia now, and
$2000 is just to much (I used a Crash Barrier EPROM emulator
and a dismantled cartridge to build the Vectrex dev unit in case
anyone is interested - just to prove to a guy in the office that
it could be done).

Much better call is for folks to sign up to the Yaroze project
on Sony - it's cheaper, you get more for your wedge and
you get a crack at the wider world if you produce something
worthwhile (license it to a big boy like Psygnosis). Or do it
for a better reason - fun, and a chance to face off against

the best of the amatuar game dev fraternity from Japan &
Europe.
UK delivery of Yaroze kits is february, US launch should be
some time after that - we finally get something first ;)

>sector 50 or 60.

really? Many years ago (decades, it seems), I bought FSII
for my Atari 800, and when I went to make a backup, I discovered that
the disk was filled with many bad sectors (I was used to seeing
a few for copy protection). I figured that the disk was bad,
since there were so many bad sectors, so I returned it to the store,
and ended up getting something else, since they didn't have any
more FSII copies in stock. Oops. I wonder if anyone else did this?

>Loving Atari 8-bits since 1982...
>(...and for another fifteen years at least)

Since 1981 for me...
Right now I'm taking a long break from them, due to lots of Thesis work
eating up all my free time, but hopefully I'll be involved with them
again when it's over... Hey, maybe I'll even get my emulator up
to date with the latest emulator innovations then?

>return.)

Which comes first, getting the facilities to produce, package, and
market a game? or selling it?

We have hundreds of EPROM cards in stock waiting for the software to be
done. We have dealers who are ready to distribute anything we write.
We are working on getting boxes and manuals made that look like the
ones that Atari did (as opposed to what Telegames is doing). We have
the EPROM programmer and EPROMs (and I'm ordering more EPROMs today).
The only thing we don't have is a "track record", but I don't need one
to offer these services.
For example, if Carl Forhan wants us to make 200 Pong games
and sell them, we could get it done in short order.

If anyone buys a Howard board from us, writes any kind of
game, and needs facilities to sell their game, we have it.

repeat sales pitch

Only $2000 buys you a Lynx business opportunity - not a toy or a
collector's item. Call (612) 462-2500 to order one.

****
Watch this space for new Lynx games currently in development by
Carl Forhan, Bastian Schick, and myself.
This is NOT a vaporware announcement.

Even if there was no atari piracy do you honestly believe Activision, Electronic Arts and other software manufacturers would have supported the Atari 8bit for any longer than 86/87 or 1988. Even the C64 which had their software manufacturers locked in long term contract saw new software till about the earlier 90s then it died off too.

Piracy didn't kill the 8bit, new technology and profitability did. more people have Nintendo, segas andIBM pcs than atari 8bits, there just wasn't money (even if all 8bitters bought legit software) to keep them in a profitable business!

In a message dated 1-15-97, Dan Vernon said:
|
| I just picked up a Commodore 1701 monitor and haven't tried
| to do much with it yet. It has a choice of inputs. Either
| Chroma/Luma/Audio or Video/Audio. I have heard some about
| the 1702 (in the most recent FAQ) but not this model.
|
The 1701 and 1702 are essentially different versions of the same monitor.
If you covered up the nameplate, you would not be able to tell them apart.
The only difference I know of it that the 1701 was packaged with a 5-pin
DIN to dual RCA capable (composite + sound), whereas the 1702 was
packaged with the 8-pin DIN to triple RCA cable needed for chroma/luma/
audio from a C64. Both monitors have both the front audio/video and
rear chrom/luma/audio jacks, however.
-
I have heard there were some internal differences, but have never been
able to confirm any. My first monitor was a 1701, BTW (which I still
have), which is why I know a bit about it.

>: we know and love?

It's veeery close.

The only differences are:
The MULE sprite is multi-color and more detailed
During production, there's no sound of "stuff" being produced
During auctions, there's no rising/falling sound associated w/ production
and spoilage and use
During auctions, pushing your stick against the transaction line will not
accelerate the timer
I could never get collusion to work

I have to say that the price you want for these units is very steep.
They may have cost $5000 originally, but it wasn't that long ago that
286's cost that sort of money, and you can't even give them away now.
It's an unfortunate fact that computer equipment devalues hideously
quickly, and obsolete equipment is worth almost nothing. The units you
are selling aren't even new. Half price may be reasonable for
second-hand units for a CURRENT product, but the LYNX is effectively
dead. No more are being made. Atari in effect no longer exists. There is
therefore no hope of marketing or advertising support for any new Lynx
related product. Also, what if the thing breaks down? They are full of
custom chips. What hope of getting spares? This is a very risky
investment!

$2000 may not be much to a professional developer, but how many
professional developers are really going to be interested in the Lynx?
Can you HONESTLY make a livable income writing Lynx games?

In my opinion, the only people who are likely to be interested in the
development units are tinkerers, like myself. I would be very interested
in obtaining a development system, but not at this price. The price
would have to be about a quarter of what you are asking for me to
consider it. If you find you can't sell the units, and are prepared to

drop the price, then contact me.

My offer isn't going to get any higher...Sorry.

Lionel...

492. FS II Protection Breaker #2

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-16 00:00:00 UTC
From: edmund.wells@stickwick.com
Message-ID: <32dd35bf.0@news-feed.ndirect.co.uk>
Source record: 76898

Hey all

Thanks for your tips. I apologise for the fake email address -- I did intend to note that fact in my original posting. To those who emailed me and were bounced: sorry! Those whom I've managed to thank via email and with my real address have already received my apologies.

Why the cloak and dagger stuff? Read the asshole posting from Bob Klutz and you'll know why...

Just for the record ... I have the original disk, boxed, with manuals, that I bought new back in 1986. It cost around UK 45 pounds (work it out in dollars!) and I love it so much I'd like to make a copy (or two!) for my OWN BACK-UP PURPOSES ONLY, and partly because I'd like to examine the original code and try to work out what's going on in there!

And now a little more about the FSII protection. It has, as far as I can make out, a bad sector positioned at every 18th sector (18, 36 etc) plus some bad/missing/phantom or whatever sectors starting around sector 50 or 60.

A straight sector copy produces a working version that runs for around a minute or so -- just long enough to get off the ground -- then hangs with a blacked-out windshield view -- clever programming or what?!

A tricky 'patched' type copy doesn't work at all. It stops just after loading and before the instrument panel is drawn (those who know the program know at which point I mean) and puts up a message 'System Error xx at xxxx'.

I've disassembled the code using Scanalyser and there's *thousands* of CMP xx, BNE xxxx and CMP xx, BEQ xxxx type instructions. Try unravelling that little lot!

Thanks for all the help.

Loving Atari 8-bits since 1982...
(...and for another fifteen years at least)

Ed.

>-----------------------
>Trevin Beattie "What's to bad about being drunk?"
>trevin@xmission.com "You ask a glass of water."
> {:-> --Douglas Adams, HGTTG

I built the 1489 version too and it failed to work ... however (and
this has already been mentioned in other posts but...) I changed the
RI 'notification of action on the SIO2PC' to the DSR option from the
APE main screen and Hey Presto! It fired up and worked fine.

My SIO2PC is connected to the PC (a P75) via a four-way serial port
switch box -- maybe there's no ring indicator pin connection in there?
Whatever, it worked! Try it.

Just for the record: I've also used APE with my ancient 'Tandy 5000MC'
386DX20 machine and it works just fine, though much slower when
formatting *big* (ie 16Mb) images.

If all else fails, try building another, completely fresh cable -- the
1489's a pretty cheap component and you might have a bad one (OK, but
it's worth a try!). And remember, not all SIO cables have the same
colour coding -- some differ from the orange/purple/light blue/black
etc connections described.

Good luck. You'll crack it soon

> What is BW Dos?BW-Dos is a Freeware (V1.30) Dos with Sparta-Dos Filesystem.
The first version was distributed by the ABBUC (a German Atari-User
Club) as a gift (there are two free gifts per year, when Iï¿½m right).
Itï¿½s works fine, has the SD 3.2f command set (That means CWD not CD ...)
and some very nice tools, also working with SD 3.2.
The most important feature is, that it will not use any memory below the
Operating system, so that Turbobasic and other programs will work, too.
It has no built in DOS 2.5 Filesystem supports "only" drives 1 till 4
and 8.
It comes with some nice features as an default "DOS" path (means that
you can store all utilities in the "DOS"-directory, an AUTOCWD command
(means that you can specify a path as default, which is set during
every "RESET"-command) ...

There is only thing I donï¿½t like - itï¿½s only half as fast as SD 3.2 gx
(tested with my hard drive) I donï¿½t know why - but it is that way.

The utilities disk in the downlod area at my homepage contains a BW-DOS
1.3 (but without all utilities.
I donï¿½t know, hwere to get it from and if it is uploaded at UMICH yet,
but contact me for further information.

Thanx, Matt

Message-ID: <5blc4p$7au@clarknet.clark.net>
Source record: 76903
Cross-posted to: comp.sys.atari.8bit,comp.sys.cbm

The other day I picked up an Atari 130xe, but without a power supply. I was then chagrined to see that it was different from the 800's.

After recently discovering that the video/audio ports of the Ataris and Commodores were mostly compatible (the same cord can be used), I wondered if, by some lucky miracle, the power supplies might be as well. Sure enough, the C64 power supply plugs into the 130xe's port (but I haven't tried turning it on, for fear of damaging the 130xe), and the specs partly match -- 5V, 7.5W DC. But the C64 also offers 9V AC.

Since I have several spare C64 power supplies, is it possible I could adapt one of them to drive the Atari? I hope no one regards this as sacrilege. ;-) I haven't yet been able to find the pinout for the C64's power; I have the Atari's, but I'm not sure if it's the port or the plug (i.e., is it flipped).

I've been finding a lot of machines without power supplies in thrift stores lately. :-(

I owned it (got rid of it), and I hated it. The whole game had an
odd feel to it (very Japanese). The "town" was laid out horizontally
(changed everything!). What I mean by that is that little doors
for each thing (crystite,land,pub,food, etc..) were spread out over
a few screens! In auctions you can't sell fast, if you have 80
smithore to sell you have to sell them one at a time (slowly). Not
to mention much crappier music. I bought it at the time because I
hadn't played MULE for a long time and I expected it to be an upgrade.
Wrong. Dig up your Atari and play that version it's still the best...

I not sure what the legal situtation is, but anyone can just download PC Xformer 2.3 or something and just get the ROM files as well as AtariDOS on a disk image. The guy who wrote the Pokey emulator has Xformer on his web site so you can get the OS images from there.

There is a menu program that comes with SUPERDOS, called AUX.SYS.
When this is loaded you can select to write "SUPERBIN" to any sized
disk (up to double density). This uses graphics mode 1 when booted,
and can display around 20 odd filenames. But, as is with a lot of boot
sector loaders, there are a few BIN/COM/EXE's that refuse to work. So
a little experimentation is prudent. And try not to place too many
files on the disk, because the boot program uses some of the DIR
sectors to load DATA from (for high speed operations etc).
I think it can also load BASIC files, but I haven't actually tried
this.

Hello. I need some help with ANTIC...hardware questions, not software.

I know very little about this IC. I mean, I know what it does--but not how it does it.

In particular I seek information about the bidirectional data lines. How are they releated to the R/W line. As I recall, the ANTIC has a bidirectional line to the xITA for the video, as well as bidirectional address lines.

Are any more lines bidirectional? How about the data lines?

How do I know in which direction the data is flowing. IS there I way I can tell from the R/W line?

Any information (pointers to web pages, etc) would be helpful. Thanks.

> Then the programme can read it when it gets around to it.

There is a fundamental problem with IRQ sharing on a PC. While,
theoretically, two COM ports could share an IRQ and the driver could
poll both to see which UART generated the interrupt, there is a
race-condition that can develop between the two ports when they both try
to generate an interrupt at the SAME time. The problem lies with the
8259 programmable interrupt controller. If two of its pins go TRUE at
the same time, the thing flakes out and stops giving any further
interrupts without reinitializing the chip. I've played with this
extensively and found that the only guaranteed way to implement more
than two COM ports is to use different IRQs for each.

Hope this helps...

Slight edge in graphics?? Yeah, you have multicolored text, but you only have 16 colors. Lets see, colored text in 40 column mode vs sixteen times more colors. Not a tough question for me.

The Commodores have a some good points, but compared to the Atari graphics is not one of them.

One problem using any type of DOS to copy a full NON-DOS disk, is that DOS usually only copies by checking the sector map located near the DIR sectors. I remember using MYDOS to copy a disk, and re-writing it back, only to find HALF the DATA had been copied. (arrgghh no backup either). There are a number of sector copiers around, and a couple of DOS's that will copy ALL too (ie: DOS 2.1c, SMARTDOS, and SuperDOS (if you input the sector numbers)). If you let me know what type of hardware you have I can send you XE-MEGADUPE, of course the name means you need an XE or expanded XL., and also a US 1050.

anybody have a good sector copier?

i'm using either an 800, 1200xl, or 800xl and stock 1050's.

i have one called sector tool written in basic, but thought someone
might have a better one.

thanks,

robert

Its a monitor cable for a C64 I'll wager. Probably RCA jacks go to chroma,
luma, and audio.

Son....the fact that you do not approve of Bob`s spelling or grammar
does not detract from the rudeness of your reply. Bob has been
supporting the 8bit for quite a while now and does not need some
"college boy" to be arrogant to him....
Bob has a passion for the 8 bit that is to be admired. Some of us have
the same passion in different fields (hacking, cracking & collecting)
that although different are linked by a bond towards the continuation
of the 8 bit as an ongoing item.....

How long have you been an "8 bitter"?? I have been with the Atari
since day 1 and I dare say Bob and almost all of this group have been
too. What right have you to snap at him...errrrrrrr....NONE

If you want 100% spelling and grammar then nip off to another news
group like alt.anorak.spelling.lists.

If you have something to add to this group PLEASE do, if not then pass
on to another group and hassle them.....Sorry buy Im fed up with
people invading this group just to "Take the piss" as we Brits say...

Cheers....

I have done the upgrade..... <G>
The Supra MicroPort kit is a generic, do-it-yourself PBI board. You can use it for whatever you like - build it on the board. Basically a power supply, a decoder and empty board space for your project. You don't need it for a PBI on the 1200XL. I have plugged into a Black Box, a Supra HD (now KPI) and an MIO with my 1200XL PBI. Works OK..... a lot of little wirez, though.

Christopher Brett Strong wrote:
>
> Hello. I need some help with ANTIC...hardware questions, not software.
.
.
ANTIC takes control of the address and data lines whenever it needs them by asserting the HALT line (goes to ground). ANTIC then controls the R/W line to set data direction - plus is data into ANTIC (read) and minus is data out (write). So, once HALT is active, look at R/W for data direction by ANTIC. Note that HALT is 1/2 cycle ahead of the system clock, going active or inactive in the last half of each cycle. You must latch it during clk0 to use it properly.
ANTIC uses the buss for REFRESH and getting data from memory, and to supply data to GTIA for players, I think..... never looked that close at P/M activity. Anyone know for sure?
Bob Woolley

Hello Jonathan Smith,

On 16-Jan-97 21:53:01, Jonathan Smith <paulsmith@enterprise.net> wrote:

JS> Does Anyone know of a BBS program for the Atari??

Here is a list what was post in this newgroup some time ago... :

I run a BBS by my self and I like the : BBS Express PROfessional as the BEST.

===

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o F.O.R.E.M. BBS -- Friends of Rick E. Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FOREM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the ATARI 8-bit
has been placed into the public domain or not. This BBS was the first to
support a RAM-disk, which Paul Swanson called a "V:" device for "virtual
disk". This BBS was written in ATARI BASIC and required a joystick
hardware "dongle" device. This was notable as being one of the first ATARI
8-BIT BBSes that could actually go for a week without having to be
rebooted. Pointers to the message base were kept in an ATARI "very long
string" (for which ATARI BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An ATARI 8-BIT version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC-XE cartridge to run. This BBS program was very

popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SPARTA-DOS environment. This was a problem
until very recently, when SPARTA-DOS was released into the public domain.
This BBS program uses a "modem clock string" rather than an R-TIME-8
cartridge in order to retrieve the current time. It also comes with an
ATARI BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC-XE.
This version of FOREM BBS requires the commercial BASIC-XE
cartridge in order to run. It is in the public domain and can import and
export messages from the ATARI PRO! BBS EXPRESS-NET (7-BIT text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in ACTION! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial
programs. I haven't heard anything about OASIS IV and CARINA for a while,
but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Thanks for all the great replies, information, and offers to my post!
You have all been very helpful.
I'm keeping the video music device, at least to try it out, so no offers
right now please.

I was wondering, is it just fond memories of my innocence, or were the
Atari/Commodore/Apple II days great? I think it was nearly utopian that
there were so many choices, yet a lot of stuff still was available for
most systems. It seems glorious compared to the Mac/PC wars and near
monopolies of today...of course Microsoft still made all the system
software back then, too.
I remember using the Apple II's at school and then coming home to my C128
and trying to program in BASIC, then my mom's friend brought over his
Atari (800XL, I think) and he, my brother, and myself would play Wizard's
Crown or Eternal Dagger, and others all night/day...

Oh well, thanks again; I'll be reading!

the
>Atari Video -- is this right?

Unless you are using a stock (unmodified) 800XL, you can chroma/luminance
lines, they might give a better quality picture. The Video line is just
that, the full video information, both Chroma and Luminance in one signal.
The 800XL was the only model that didn't have the Chroma output, so your
best bet would be to stick with the video. You could try putting the
Atari Video into the Commodore Chroma, but whether it works or not, I'm
not sure. You'll get color for sure, but I'm not sure about luminance
(some monitors act different than others).

Hope this helps.

Depends on where and when it was made. My 800 has the silk-screened conductive-paint type keyboard that most of the 800XL's have, just the older layout.

You can use the !HALT signal. This is set (to stop the 6502) when the
Antic does DMA.
Why exactly do you need the direction of the signals ?

Bye,
Markus

Graham Thornton (dangermouse@prodigy.net) wrote:

: Ortman lists an address of Decatur, Illinois. I moved to Peoria, Illinois =
: from the United Kingdom just over six months ago.

I lived in Centralia, which isn't too far from Decatur, about 100 miles. I
now live in Louisville, KY, and been here since late 1987.

As for the prices in pounds you're mentioning, Atari did well in the UK
and other European countries. The only differences I know of in the 8bits
would be that they're in PAL and not NTSC, if I'm understanding right.

I came across a 1040ST with color monitor and trakball for $40 at a thrift
shop. I let it go, and it was gone next time I went by.

: Tandy TRS-80 - $80

Nice price, provided it still works, has the original tape drive with it,
and so on. Was it a Model I or III?

: Clone XT with keyboard, 20MB hard disk but no monitor - $150

The local thrift has a full size tower 286 with monitor for that much.
[sigh] These people don't realize what's going on at times.

: Atari 800 with 810 drive and some software - $350

I bought someone's collection with the same thing for less than half.
Hmph. The kind of weird people you come across...

: IBM 8513 VGA monitor - $199

This is quite a good monitor... I got two 8515s, for $200 each a few years
ago. They still work. When the connector went out, I sort of BSed the
techs that I had lost the paperwork and they gave me a new monitor, when I
tried to get it repaired and they attempted to charge me for a new one.

: And these prices are by no means the exception, as we are expected to pay e=
: qually outrageous sums for used (often very used) televisions,
: automobiles, furniture... in fact just about everything. It's almost as
: if the residents of Central Illinois believe the economic laws of
: depreciation don't apply to them.

It's not just Illinois, rather, most of the other states. I see sometimes
ridiculous prices around as well. You can see it in the misc.forsale
groups as well.

: Please! - don't just regard it as your right, but your duty to comment on
: these ridiculous prices and maybe, if we're really lucky, the folks

: around here will eventually get the message.

The problem is that if you tell Ortman that, he will flame you to a crisp telling you he's had these storage fees he wants to recoup, something about a guy who had a stroke, and then some. The guy's all bark, no bite. He threatens, but little or no action. All hot air. Just like Steve Winter, the infamous loon of Durham, NC, in the alt.fan.steve-winter newsgroup. The 400 price was something from around the late 80s, after I left college. I can easily find one with a little looking around for less than $15.

>robert
>dperw@mail.utexas.edu

Well, there's not too many around that will run on less than a 130xe
(or expanded XL), and usually require US doubled or Happy drives for
high speed. Hmm, your best bet would be to use DOS instead of BASIC
programs. If you need one with a decent "duplicate disk" option, I
have DOS 2.1c, SmartDOS, and SuperDOS (2.9, 4.0, and 5.1).
I recommend DOS because of course running BASIC programs uses up
memory that could be used for copying disks.
DOS 2.1c and SmartDOS both have a similar "J- Duplicate Disk" option,
once you have selected the drive(s) for copying, it goes to a screen
which displays the sector count(s), empty sectors, bad sectors etc.
Empty sectors are not actually written, so formatting a blankdisk
first would be best. To bad you are not using a 130xe (or upgraded
XL), I have XE-MEGADUPE, which is a great US doubler sector copier. It
copies a full single density disk into memory in about 30 seconds, and
then writes in about 40 seconds. Anyways, I'll check my utils disks
for some other great copying utilities, and hopefully post them into
alt.binaries.atari soon.
BTW, do you have any way of copying any files that you get from the
NET to your ATARI? Just asking- in case you need help there....

>dperw@mail.utexas.edu

OK, just went thru my utils disks, and came up with "SECTOR COPY".
It looks perfect for use on any standard ATARI (400/800/XL/XE), and
any standard or modified 1050. It also copies 1050 enhanced density
disks too, which is a bonus.. (I didn't even know I had it). The
default setting it has for "ending read sector" is 410- which I have
found is in HEX and =1040, so for single density disks change it to
2D0. You'll see what I mean when you run it.
I've included the .COM file and an .ARC just in case the .COM gets
corrupted in transfer.

Happy copying.... Steve.

ps... if you cannot load it from DOS, try placing it on a disk with a
simple boot sector file loader. If you need a file loader let me
know..

You didn't happen to mention with Atari computer you were using, but for the 8-bit the best two on the market would have to be Pro BBS or Carnia BBS. Of the two I perfer using Pro.(written in assembly) It is easy to write modules for. Carnia is written mostly in Basic with machine language calls for doing the hard and dirty work. It too is easy to write user modules for. Both can network. Bob Klass sell Pro. While Carnia is sold by the Shadow (Mr Atari01 here on the net)

Hope this helps you out.

The only on that I have seen for the ST is BBS EXpress ST and I don't know who sells it anymore

551. AtariWriter Designer Sells All

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-17 00:00:00 UTC
From: garyf@mcsiad.UUCP
Message-ID: <E45qu8.FpL@mcsiad.UUCP>
Source record: 76862

It seems like only a short time ago when during Easter vacation 1982,
I sat down at my Atari 800 using the original Atari Word Processor
to design the specifications for the AtariWriter cartridge word
processor. I was the Program Manager for productivity software for
the Atari Home Computer Division, and spent the next year managing
the development and productization of the AtariWriter word processor.
But time flies when you're having fun and before I knew it, I was
leaving Atari and had begun to write and sell the Printer Drivers
for the AtariWriter cartridge word processor. I eventually built
Printer Drivers for about 145 printers and sold them all since late
1983 via mail order for $10.00 each.

Now comes the time when I have decided to part with all of that Atari
hardware, software and documentation that I used over the last 13 to
14 years because I haven't sold a Printer Driver for the last year,
and .... more importantly, my wife says we need the space in the
computer room!

Anyone interested in buying all or part of the hardware, software
and documentation should contact me (Gary Furr) at 1-800-470-0704
PRIOR to January 24th when I leave my current job for a different
company. After January 24th, you can reach me through my CompuServe
account at: 75673.2446@compuserve.com

I have not actually cataloged all of the stuff, and I'm pretty sure that
I have some source listings that some of you would be very interested
in. But, primarily, I'm trying to get rid of:

two (2) Atari 800 systems with all power supplies and cables, work great
three (3) Atari 810 disk drives, working and complete
one (1) Atari 1050 disk drive, working and complete
one (1) Atari 600XL system ... brand new, never used, complete
one (1) Atari 800XL system ... brand new, never used, complete
one (1) Atari 1027 printer ... still works as far as I know
one (1) Atari 825 dot matrix printer ... still works as far as I know
one (1) Okidata Microline 92 printer ... still works, in great condition
one (1) Atari 850 interface box ... still works attached to 800 system
one (1) set of Joy Sticks ... worked the last time I used them, 12 years ago
one (1) 12" monitor used with connected 800 system
numerous cartridge games
numerous Atari manuals including several copies of De Re Atari

Business hours at the above phone are 8:30am - 5:30pm EST, but only until
January 24th. You can get me through the CompuServe account any time.
Located in Northern Virginia, price will include shipping to your location.

> THANKS!!!!!!!!!!!!
I agree...
And one question. My friend tested Xl-it 1.6, and many games didn't work.
Fred,Mission Shark and many other great games from Poland. Did my friend
made any mistake in configuration, or this emulator don't emulate games
from Poland ;-)
P.S. It's funny, because all demos works on Xl-it. Without my Back to Life.
I'm very angry ;-)

: So if July 30,1996 is when Atari officialy died when was it 'born'??

Some time in 1972, I believe.

Oh, incidentally, Don's article (Did Anyone Say Goodbye?) appeared a couple of months ago in Next Generation, a video games oriented magazine. The month before or after they also ran an article on the history of Atari, whether the idea for Pong was stolen from Magnavox, etc. This month's issue has a section on myths/truths about classic video games. Well worth checking out...

Thing is, from about '82-85, these three platforms all had an appreciable
market share, and none dominated. Apple started pulling away from Atari
and Commodore by about '84, but even so, none of them had more than a 50%
share at any one time, and none had less than a 20-25% share. In other
words, all the markets were too large to ignore, and the major software
almost always came in three (or more!) formats.

Consumer choice *and* a lot of software for each platform. In many ways
that *was* utopian.

560. FS: Atari Computer Goods! More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-18 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <5bpbjonon1@nadine.teleport.com>
Source record: 76783
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got Monitors for your Atari 8 Bit like Commodore CM-141 "Like the Commodore 1802" And Disk Drives for the Atari 8 Bit like Stock 1050 and a 1050 Duplicator Drive for Backing Up Software. Plus I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! And for the Atari ST & newer Computers I've added to my HardWare Catalog Supra Hard Drives, Spectre GCR Mac Emulators and Indus (Future) GT Disk Drives. I've also updated the ST Software Catalogs. Updated and more Software Titles added such as Brand New copies of Ultima V for those of you fanatic Ultima Collectors for the ST & for those who like Battling in Mechanized Combat, their's BattleTech, OGRE & OMEGA! And for those of you with more productive things on your Mind, PrintMaster & PageSTream!

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking. And something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

> older layout.

At one time I would have thought that statement incorrect. Only recently did I become aware of those horrible "fake" 800 keyboards. All 800s were made in the USA; and the "real" and "fake" keyboards seem to have installed at the same time, according to the date codes. Very sad.

-Chris

565. Printer anyone?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-18 00:00:00 UTC
From: antbbaker@aol.com
Message-ID: <19970118082201.DAA24421@ladder01.news.aol.com>
Source record: 76788

Does anyone have a dot-matrix printer with pretty-good resolution (hopefully a brand name)? I know my Macintosh Color StyleWriter 2200 Ink-jet won't work with my 800XL and all I have for the 800XL is a daisy-chain printer.

Thanks and E-mail me with a price at:

AntBBaker@AOL.com

566. A Hard Drive would be a good thing

Just be VERY glad you didn't try to turn it on. The Atari XL and XE series take a 5vdc supply. +5v is on one side of that plug, return is on the other. There is no 7.5v. The other voltages present in that C64 supply would have burned that 130XE up in half a heartbeat. I don't remember offhand what current the C64 supply can handle, but you need almost a full 1.5 amps to reliably operate the 130XE.

Sure you can use ST software on your PowerMac, just get MagicMac. It
works great for GEM applications, but not with games.

American Techna-Vision is currently offering special pricing on
the Supra MicroPrint Parallel Printer Interface. This interface
connects to the 13 Pin S I/O connector on your computer of disk drive.
You can connect any standard parallel printer; inkjet or dot matrix,
etc. to any Atari 8 bit model. The 1200XL requires internal
modification, instruction included. Special internet pricing: $9.95
plus $6.00 shipping and handling. MasterCard/ Visa welcome.

I tested my SIO2PC box using HyperTerminal (under Windows '95) even before I
tried the SIO2PC program. This gave independent verification that the Atari's
bootup sequence of command frames were indeed getting through.
Before that, I used a LED left from my old PC to test the signals on
various pins.

> > Wanted! Booting menu program capable of Double density and able
> > to display all files on disk for booting.
>
I made a binary file menu & loader especially for SpartaDOS X called
(what else) MyMenu. Special features include:

. program size < 2K
. lists up to 36 files
. loader code hides in the stack- can run nearly every binary file
. switch disks and hit any key to see new dir. without rebooting
. does not rely on extensions, you can use entire 8+3 for naming
. lists only protected files- unprotected data files are hidden
. customize with your own font and/or title

no subdir. support or lists longer than 36 files, sorry.

Well, I have tried fixing the power supply (again), and that failed.
SO, I decided to build my own and I used the transformer from the
Atari "Black Brick" power supply. The humbar problem has now been
fixed!

>2. Using either computer with our PointMaster joystick, it will
>sometimes jam. This occures when I press the joystick left sometimes.
>This causes the screen to display all sorts of characters.

Well, I'm still in search of a pair of working joysticks. Bob Klaas,
you have not yet replied to my email for some reason. What I used to
have were a pair of PointMasters (black with button on top of the
stick), so I'd like a pair of them or a similar kind (that would
last...).
Until then, I will have to make do with my modified trackball.
I added a homemade switch (to override the faulty contacts) to it.
It's okay, but not ideal for playing Super Cobra, Frogger, Star
Raiders, Star Raiders II, et al.

So, if any of you have a pair of working joysticks for sale, please
email me!

>Thanks again!

Thanks! rhkramer@fast.net

> least on a real atari.Yes, thats right - but in emulators often the disk emulation is not "good enough" - sorry to say this, but I also think beside the graphik a really good SIO emulation is the most dificult part to do(And a great work was done, if AR runs at the emulator).
> Where do I get BW-DOS?If Iï¿½ll have some time, Iï¿½ll set one disk-image on my page.
> BW-DOS does not support DD 256 byte sectors?BW-DOS supports a lot of things, SD 3.2 does , too.
The most important differences:
-does not support the Dos 2.5 Filesystem - you need an external "NC"-like program
-did not use RAM under the OS
-supports one path (and only this one) - "DOS"
-some commands are only external (f.e. copy, boot ...)
> How do you create such large (8MB) disk images?There are some crunched at the umich-Archive.
Are those ATR or XFD or something totally different?
The 256-byte access is a problem, XL-it still have - it emulates a normal 1050 floppy - but with a number till $FFFF sectors.
So if you directly use the files on umich, half of the place is wasted.
But with a hex-editor you can (nearly) double the number of sectors and set the density to 128 bytes/sec. These files also work with sio2pc then.

Hereï¿½s one wish, I still have : I would prefer to have the ATR-format as a standard, because it defines the parameters of a disk while XFD only stores the sectors. So it is hard to decide if the disk is 2 sectors 256 bytes, 4 sectors 128 byte or 1 sector 512 byte (maybe future Dos) - note this was an example, cause I canï¿½t calculate with large figures 8-).

Matt

I have the folowing items for sale:
Prices do not includde shipping.

Hardware

Zenith ZVM121 green mono composite monitor, with anti-glare filter. Works great. $20

Audiotronics amber mono composite monitor. $15

Multitech 1200 baud modem. No pwer supply but it will work with an Atari 1050 power supply. $5

5.25" internal SS/DD floppy drive from TRS80 model III. Can also be used with an IBM-PC. $7

5.25" floppy drive. Same as above but door is missing. Works, for parts or whatever. $3

Parallel printer interface with cable for Apple II. $6

Eight Inch Disks

Box of 9 NEW Xerox SS/SD 8" disks with labels. $3

Box of 10 USED 3M SS/SD 8" disks. These have software on them (Wang Cobol) but they could be reformatted. $3

Box of 10 NEW Dysan SS/DD 8" disks, with labels and write-protect tabs, PLUS five used Memorex DS/DD 8" disks. $4

Software
All include box and manual unless otherwise noted.

Silent Butler - Home bookkeeping program for Atari XL/XE. Disk. $6

Timeworks Data Manager for Atari and C64. Disk. $7

Partyware for Atari and C64. 2 disks. $3

Zork I for Commodore Plus/4. With box, manual and maps. $8

Script Plus - word processor for Commo Plus/4. No box or manual. Cartridge. $5

Pascal for TRS80 Model III. 2 Disks. $8

Editor Assembler for TRS80 Model III. Disk. $8

Statistical Analysis for TRS80 Models I & III. 5 Cassettes. $5

Budget Management for TRS80. Cassettes for Model I & III, disk for Model III. $5

Ricochet - game for TRS80 and Atari. Cassette. $3

Sesame Street Print Kit for Atari and C64/128. $4

Sesame Street: Big Bird's Special Delivery for Atari and C64/128. $3

Sesame Street: Erie's Magic Shapes for Atari and C64/128. $3

I will consider trades for an Atari SX212 modem and term prog. (or maybe some other Atari modem.)

Please reply to bx557@torfree.net. Do not reply to my Victoria Freenet address. Prices do not include shipping.

If you have access to a real Atari and disk drive, there is a patch
for SpartaDOS to select what kind of disk drives are attached. I would
assume that if SpartaDOS were patched for the older 810 drives, it
would work under any of the emulators? I think I will give it a go and
let you know how it went.
BTW, the patch is actually a basic program, and allows selection of
810, 1050, 1050 U.S. doubled, and XF551. I'll try setting SD for all
of these and then run it under the emulators.

Back to ya soon, Steve.

HELLO !

Think, this is definitly a RAM extension.
If Iï¿½m right, there are 16 4164-RAM-Chips, means 128 kb Extra-RAM.
If Iï¿½m right, Axlon built something like this.
Please take the description from the backside of the board to the net, it will help
the guys, to recognize this board.

Matt

599. (Useful?) ATARI SCANS

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-19 00:00:00 UTC
From: Anthony Bufort <ajbufort@mail.sas.upenn.edu>
Message-ID: <32E29FBD.683C@mail.sas.upenn.edu>
Source record: 76728

Well folks, so many people have given me such good advice and helped me out in other ways, that I want to give something back to the group. I know it isn't much, but while I was at my good-ol' alma mater, Rutgers U., I used the digital camera to scan in some images of Atari stuff. For your use and edification (hopefully) here they are, with perhaps more to come in the future.

-Tony :)

Hey guys...

Is anyone out there familiar with the game >Shadow World< by Synapse?
It looks like a real cool game, but after the third or fourth board, at
least one of the pods lands and "takes root" in the terrain, and I have
no freaking idea how to defeat it after that! Can anyone at least tell
me how to do that, or, if you have the docs, could you please post them?

Thanks,

Tony

RE: OASIS IV

I ran OASIS 4.7 for about 2 years, very good crash resistant BBS program. Worked like a charm with my black box and 40 meg hd. Oasis 4.7 suffered from a poor message editor to an atrocious file processor. Which as you said earlier discouraged file hogs. Oasis 5.0 was done in a demo version (the owner of OASIS) lives here in Toronto, Ont, Canada, but oasis 5.0 had a few problems too and was never released to the public (as of 1994) I don;t know the current status of Oasis. BBS PRO! seemed like the only real BBS program for 8bitters, as it was fast, had a great file and msg processor and tremenmdous support via online games and other modules.

Well, thanks to Matthias, I have confirmed that it IS an Axlon board... because those images were scanned in upside-down by me, the word Axlon is upside-down on the image. I didn't realize that there was upside-down writing when I posted it to the net in my haste. At any rate, at least I now know it's an Axlon, probably 128K.

Now my question is... WHY DOESN'T IT WORK ON MY 800!!??

-Tony

607. Atari 8bit system complete

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-19 00:00:00 UTC
From: Alan Christie <94chrisv@scar.utoronto.ca>
Message-ID: <Pine.GSO.3.95.970119145234.24137C-100000@fissure.scar>
Source record: 76736

Here's a run down of what I still have left in my 8bit collection. I know
the value of 8bit equipment has gone down a lot, but hopefully a collector
out there will give a reasonable offer.

Atari 800Xl 256k
Atari Xf551 drive (true DS/DD)
About a half dozen 8bit carts in box/w/manuals
ACEX 2400bd modem
Printer Connection (use standard printers via the 8bit SIO port)
Original Lode Runner, and several other 8bit games.
About 600 disks and 8 disk holders. A broad range of software, from
games, applications, operating systems, music and graphics.

About 40 ANTIC magazines
Over 60 COMPUTE! magazines, including some classic issues from 1981
About a dozen ATARI COMPUTE/ANTIC books including:
Mapping the Atari
Atari Graphics
etc.

Just the books and magazines were probably over $500.
Also a registered version of OASIS 4.7 BBS software.

That's all I can think of right now. I'm open to all/any offers so I'm
not going to specify individual prices. Shipping/Handling is the buyers
expense...

Alan

608. DOES ANYONE RECOGNIZE THIS?

Source record: 76737
Body handling: Binary attachment payload not displayed: application/applefile, mystery_front.GIF, application/applefile, mystery_back.GIF

Hi folks...

A while back, I purchased an Atari 800 from someone for the spare parts, and, upon opening up the hood, found the circuit board you'll see here below. These are images of the front and back of it, which I scanned in using a digital camera I have access to at Rutgers University. These images come out fine on my system - I hope they show up well on here. (If not, you can always play with them on Adobe Photoshop, which is actually what I did before posting them.)

I know enough about the guts of an Atari to know that this is not the 16K RAM card one normally encounters when opening up an Atari, not is it the traditional Atari OS. SO JUST WHAT IS IT? My guess is a memory upgrade of some sort. I tried plugging the thing in (in every one of the three normal memory slots), then checked how much memory I had using the FRE(0) command in BASIC. In all cases, the computer either crashed, or it functioned minus the 16K which was replaced by this "mystery board". One clue might be the switch which is visible in the lower left-hand corner of the first image. WHAT IS THIS FOR???

If it is a memory upgrade, I would greatly appreciate someone telling me how I could fix it so I can take advantage of it. If not, then I just want to know what the heck it is so that I could fix it if it needs to be fixed and put it to some good use.

Thanks in Advance,

-Tony :)

paulsmith@enterprise.net (Jonathan Smith) writes:

>
>Does Anyone know of a BBS program for the Atari??

There are quite a few out there. For several years I ran (and supported) a PD program called Forem XE Pro, a complete rewrite of the old Matt Singer Forem XE program. If you're interested, it requires a 130XE or expanded 800XL (needs at least 128k), Basic XE, SpartaDOS 3.2 (will NOT work under SDX), hayes-compatible modem, and lots of disk space. For a PD program, it is really powerful. The latest version, 5.4, is available for ftp download at http://members.aol.com/xeboard/fxep/ which is a directory on my web page. XE-Board is a program I have been trying to work on for the past few years, but unfortunately either haven't had much time, or other things had my attention. I hope to get an alpha-test up and running up by the end of the year, but I'm not holding my breath, as my computer chess programming is starting to take precedence.

For other programs, two commercial ones are BBS Express! Pro and Carina II. Pro is supported by Bob Klaas, and Carina II is supported by Dave Hunt (aka "the Shadow"). Both make their appearances on this NG from time to time.

There are many other older programs out there, but they do not support higher speed modems.

Download FXEP (if you have web access) and let me know what you think.

The expansion slot on the 130XE can be converted to a PBI. Primary use at this time is to attach a hard drive to the system. Two companies produced them ICD which is now FTE, and Supra.

I purchased the rights from Supra and still have the cards avaiable.

As to the monitor, any Commodore monitor will work, or just about any RGB color or mono monitor will work as long as it has the video and audio in ports. The Commodore video cable works to attach the monitor.

Most of the emulators only support a 1050.
But should be possible to fix this problem ...

Matt

One hint - try to use BW-Dos instead - istï¿½s the same filesystem.
Works fine on my compi with XL-It.
Note that XL-it will only use 128 bytes/sector atr-images , but I made a
8 MB imkage with 128 byte/sec and it works great.

I have a Citizen 200GX color dot matrix printer you might be interested in. It has an industry standard centronics parallel style interface, which means you need an Atari 850, ICD PR:Connection, or MIO, Black Box or what have you. There is a color ribbon already in it, and I _think_ I have an all black ribbon around here somewhere. I also have the manual for this gem. It has emulation modes for Epson FX-850 and IBM Proprinter III, plus it's own native Citizen 200GX mode.

I would like to get about $50 but perhaps a little less if that is too hard to swing. Let me know if you are seriously interested.

SpartaDOS works just fine with standard (non high-speed drives) at
least on a real atari.

Where do I get BW-DOS?

BW-DOS does not support DD 256 byte sectors?

How do you create such large (8MB) disk images? Are those ATR or XFD
or something totally different? What emulator uses them?

Cheers,

Jon

>Mike

A couple of things... You mean a 1.2MB HD disk right? A 1.44MB disk
is a 3.5" and a 1.2MB is 5.25". Anyway as to why the disk "goes bad"
the answer is simple. You must use the disk in the density it was
manufactured for. HD disks and DD disks use a different design
magnetic coating with different magnetic coercitivity. This means

that the write current on the disk head is higher for the old DD style disks, and lower for the HD style disks. By forcing the drive to treat the HD disk as a mere DD disk, you end up having the head write current being too high which results in the magnetic domains on the disk surface "bleeding" all over the place before long.

Also another problem to consider is that DD drives have a wider track width than HD drives. The head in a HD drive is only half the width of one in a DD drive. Now I'm sure you are aware that a 1.2MB HD drive is supposed to do 360KB DD disks... and they can providing a few limitations are observed. What you need to do is get some DD 360KB disks that are UNFORMATTED and format them in your HD drive as DD disks. Also, you need to be sure to NEVER write to these DD disks in a REAL DD drive. Always write to them using a HD drive.

I don't have time to draw a diagram right now but if you need clarifiacation just ask and I will. It helps in understanding this much more.

Cheers,

Jon

(1.) I think the AXLON RAMdisk had to go in a certain slot, perhaps the
first or middle one -- I can't remember.

(2.) You need a RAMdisk drive that can handle an AXLON RAMdisk. MyDos 4.5 was
able to do it, and there were drivers for other DOS's. SpartaDOS will also
handle it, but DOS 2.0/2.5 will *not* recognize the extra RAM without a
special driver.

624. problems with SIO2PC

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-20 00:00:00 UTC
From: Matthias Belitz <matz@kawo2.rwth-aachen.de>
Message-ID: <32E3E6C6.189C@kawo2.rwth-aachen.de>
Source record: 76673

Hello !

I bought a SIO2PC interface from Thomas Grasel here in Germany.
But I have a big problem :
I test with SIO2PC 4.12, a AMD K5-90 .
SIO2PC as stand alone works fine, even with high speed.
But when I have the SIO2PC cable connected to my system, all high speed
acesses to my Speedy or Happy drives fail.
In normal speed they work properly.
It doesnï¿½t matter, if SIO2PC software runs on PC or not, if the cable is
connected to PC or not - when the interface is plugged into SIO-chain -
every high speed command fails. The greatest problem is now, that
booting up SD 3.2 fails ...

Please help me with this problem, ï¿½cause I now want to copy all my disks
to images.

Matt

I have been utilizing some of the atari emulators on dos for the pc and have played a few games that I used to play 12 to 14 years ago. I do think it is pretty neat to play them again, but this could be because playing games that you loved during your teens brings back the feelings when this stuff was just revolutionarily new and cool. Sorta like meeting an old highschool sweetheart, don't you agree.
Later,
Joe

>me how to do that, or, if you have the docs, could you please post them?

Shadow World is one of may all-time favorite games!

It's been a while since I've played, though. :(

I believe that you have to somehow plug the pod, and it self-destructs
the next time it generates a ship. I think it ties in with the thing
that goes back and forth across the bottom.

One key thing to remember is that there's a limit on the number of
space ships attacking you, so you can let them accumulate so you don't
have to worry about them comming out of the pod when you're trying to
cap it.

Are you trying to write to new 5.25 inch disks (i.e. IBM comp)? I've run
into similar problems. I've taken 1.44 meg High density disks and
refomatted them SS/SD on my Atarai 810. Using SIO2PC I've then
transfered an ATR image to that disk. The disks seems to work for a
couple of days or weeks then goes bad. Anybody else run into this?

What an excellent posting! Brought a tear to my eye. I never did know what happened to Atari. It makes you kinda sad. My first computer was an Atari, a 600Xl. I still have it, though I upgraded a long time ago to a 800XL that still beats me at chess weekly.

Graham and William,

I do not believe that the power supplies are interchangeable. I used to own an Atari 130 XE about 5 years ago (though I would love to get another one) and currently own a couple of Commodore 8-bits with their respective power supplies. I can provide you with some info about the C64 power supply.

First off, if you look directly at the pins you will notice it has an indentataion on the top and the pins are in the following order. (excuse the bad ASCII artwork)

O O
X X
X O
O

Only the pins with the Os are used and these are a ground, a +5V, and 2 9 VACs.
I am not exactly sure of the pinout of these and . But you can get a description of the power supply by going to:

http://www.funet.fi/pub/cbm/documents/schematics/c64/

and looking for the c64-powersupply.gif file there. It may even have the pinouts somewhere on this site. If I remember correctly, the 130XE user manual has the pinouts for its power supply.

Hope this helps and good luck,

-MLopez

Not a bad idea, but what would you set for a date? This couldnt apply to an non-obsolute computer cause some software for a PC (for example) is more than 10 years old and is still being used. I have to still support wordstar at work.

> C. My point, I think A8 software should be archived, like
> books, tapes, records, vhs tapes, films, art photographs,

Hear hear! Good point.

When working with obsolete computers and their software, its almost essential to keep everything around that is running.

I believe James was refering to the finite lifetime of the magnetic data
stored on magnetic media such as floppy disks. Depending on storage
conditions, the information can start disappearing anytime from perhaps
as short as 2 yrs, to 10 years or more. If one is interested in keeping
archival backups, one needs to recopy (and hence regenerate the digital
information) the data once every five years or so (assuming decent storage
conditions, no excessive heat, etc).

Copy protection defeats this process, which is definitely permitted under
US copyright law. Very definitely a stupid idea all around, making me stay
away from almost all copy protected software.

650. SIO2PC - mine finally works!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-20 00:00:00 UTC
From: InfoMan <infoman@poboxes.com>
Message-ID: <32E3B8DE.E2F@poboxes.com>
Source record: 76761

Well, I FINALLY got my SIO2PC cable working over the weekend. It's a dream on my P166 laptop 8+). I remember someone else was having problems last week or so with theirs - perhaps my experience with mine will be helpful. It turned out the I forgot the SIO pinout diagram I was using was for the pins coming out of the computer, and so I had the wrong wires hooked up in the circuit. After I corrected that and re-soldered everything, things worked wonderfully. I haven't had so much fun with my Atari for over a decade! 8+) I even tried to teach my wife how to play MULE - it's a little harder to explain than I thought it would be. 8+)

Message-ID: <32E3BFF5.1A0D@poboxes.com>
Source record: 76762

Does anyone know where I can find a copy of Preppie? It doesn't seem to be in any of the archives I can find. I have found that of my old Atari disks I can actually find, a good 75% of them no longer work. I was able to find a replacement file for MULE, but I would love to play Preppie again, also!

653. PC Xformer 3.6 on www.emulators.com

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-20 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <5c0j2k$e6b$1@brokaw.wa.com>
Source record: 76764

Emulators Inc. has just released an updated version of our free PC Xformer Atari 8-bit emulator for MS-DOS, OS/2 Warp, and Windows 3.1.

PC XFORMER CLASSIC version 3.6 is the latest Atari 130XE emulator. The biggest fix is the long standing DLI bug that caused colors to be off by a scan line (most noticable in the 130XE self test screen). Requires a 386 with 640K of RAM.

Download PC Xformer Classic from the Emulators web page at http://www.emulators.com.

There is a link on the main page called "Run Atari BASIC Now" which will run a stripped down version of PC Xformer than boots directly into Atari BASIC. Use this any time you're online and need to type in a quickie BASIC program. Or click the "Downloads" link to download the complete version.

From: jyoung@sirinet.net
Message-ID: <5c09fu$nnh@ns2.sirinet.net>
Source record: 76766

I used to have an atari 800 way back when for about 3 months until
it got broken and I got a c64 instead. Ive forgotten most of the
commands and such. Anyway, heres the question...
Im running ultima I thru an emulator (tried xf25, pokey, and xlit)
and when I try to initiate a new game it asks for a new player disk.
Ok so I put in the old player disk hoping it will write over the
old character.. nuh uh. asks for a new one again so I try a blank
image disk.... it gives me an error (170 I think) tried with xfd
and atr blank formats and the same error occurs on both.... How can
I create a new character?
Thanx in advance

>
>Whelp, I think the more serious problem might be that Sparta Dos loads
>part of itself under the OS rom. I'm not sure if the Emulators bankswitch
>these areas.
>
Now that's a good point too. But if an emulator "emulates" an XL or
XE then it should do the bank switching unless it specifically states
that it can't/won't. I know Rainbow won't in the demo version and
such. Well, I dunno. I will get more serious about all this when I
set up my 800XL next to my PC. That won't be for a while yet though;
too many other things on the burner 1st..

Thanks to you, Steve and the others that responded.

Cheers,

Jon

Thanks to all who helped me out with my Atari hardware questions!

Hopefully someone can also help with this:
I'm at a loss for the title and manufacturer of a sci-fi game I used to play on my friend's 800XL. It was an RPG, and one of the races was a mutant, which had an icon w/four arms. The money was in credits and there were skills to train in. It very much reminded me of Wizard's Crown and so I thought it was an SSI title, but movement was, if I recall, limited to your party's icons on the left of a black screen and what they encountered on the right, and somewhere there was text explaining what was happening. Often times we got attacked/approached/ambushed by "berzerk robots". The combat was tactical, and the only weapon I recall was a "gemstone grenade" which acted like a fireball (as you could tell, my specialty was fantasy RPG's). This occurred in town, but later you could fly, arcade-style, a little spaceship and try to dock to get to adventures or scenarios. We never really got to those, as I recall the easiest one required very high lockpicking just to get through the first door. I do remember the little spaceship flying part was nerve-racking, as it went fast and you only had limited fuel or the dock moved or something.

SSI said it was gemstone warrior, but I thought those were almost all arcade-like. This was definitely an RPG game.

Anyone out there have a better memory than me?
Thanks for your help!

A warehouse store here just obtained a large number of Atari systems, perhaps one hundred carts (from Asteroids to Star Raiders and Ballblazer and beyond), countless power supplies, drives (perhaps twenty-five Rana drives, and many Atari models), what looked to be a tape backup for Atari, and various cables, software, memory cards (some without plastic jackets; raw boards), OS cards, a few CPU cards (6502B), 4-way serial splitter boxes, and a few modems and modem software.

I am not an Atari wizard myself, and so I can only mention the names: everything from the 5200 and 7800s up through the 400 and 800, XE130s (several), 600s, 1200s, and various other STs. There was one original Atari Home Video System for the truly avid collector in you.

If you are interested in this material, fax him - he'll be too busy to answer the phone for a little while -- at 408-462-6798 and describe what you are looking for. The systems are still spread out over two sites and he may have to go looking to meet your needs. The store is "Computer Jones" and his name is Brian Thomas.

The Alien voice box plugged into the SIO port of any Atari computer, displayed a face on the screen that would move as the speech was produced, you were able to control pitch and duration making it s nice little product.

Another good product was SAM (Software Actuated Mouth) which also allowed for a great deal of control.

I believe is was Analog (or Antic, its been a long time) did an article on a voice synthesiser that would plug into your joystick ports, but you had to be careful not to plug it in while to computer was on, you risked blowing out the board and even the pokey chip as well, the same applied if you plugged the unit in backwards (ouch!!!)

Well, considering that the emulators need megabytes of RAM and disk
space which were unheard of in the 800's heyday, you'd have to say
that it got fat like the old high school sweetheart, too. :)

Your drawing is upside down. The row of seven pins is always on the
bottom. Looking at the computer, the pins are numbered

2 4 6 8 10 12
1 3 5 7 9 11 13

Double check it with a voltmeter. Pins 4 and 6 are ground, 10 is +5
volts. 12 is +12 volts on 400/800, not connected on XL/XE.

Great game. Use to play it all the time. After a pod lands, you need
to pick up some device that is on the ground. I forget if it is moving
or not (it looks like an arrow I think). You pick it up, fly over
the pod, and just touch the top of the opening to plug it up. You might
need to hit the fire button to release the plug though.

I can't remember more.

I think you'll have to download a NEW character disk for it to work.
When you do, make sure to make a copy and use that instead, because
once the character disk is used it cannot start a new character.

Hope you have some luck.

>where can I get this program?
>
>

What he is saying is that he is having problems copying ATR image
files to a standard REAL Atari disk, via a program which EMULATES
Atari disk drives on the PC thru a serial port. If you want a program
to read and write to an Atari disk in a PC's 5.25 disk drive, have a
look thru my homepage for a utility called MYUTIL.. One stipulation is
that the Atari disk can only be Double Density for it to work. So you
have to have a double density drive like a upgraded 1050 or XF551 etc.
Just have a look around at the various links to other Atari HP's and
I'm sure you'll find what you need.

682. Atari 8 Bit Fair Schreiersgruen/Ger

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-21 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <5c2nkd$p3d@widukind.fh-worms.de>
Source record: 76694

Hi to all,

this year is the second Schreiersgruen (Germany) fair for Atari 8 Bit computer on 15Th of March.

Last year visited us about 70-80 Atari fanatics and the persons who sold Atari 8 Bit Hard- and Software have been very happy. There have been KE-Soft , AMC , Kaisersoft, nearly all of the Ram (a ABBUC group) and many more that i could not name.

You will see some of Porttronics devices :
Hardware:

Uni pad (a joypad with many funktions)
the Power Pad (more funktions)
Stereo Blaster/Phaser (one couls be programmed , enhanced Sound support ...)

Herbert and his friends

As last year will Andreas Magenheimer (RaM 3) give you tips and hints for the Soft- and Hardware.

Kaisersoft (RaM 1) will sell their latest Polensoft:

from Rockman to Sexy Six, many from Mirage and the other good game designers from Polen. You can also talk with him about the Top Mag and other things.

Highlander Soft will show you some new Hard- and Software and give you a little guide if you have problems. (RaM 2)
He can also help you if you have probs with the XFormer (ST).

Helmut Weidner will organize the whole fair and Markus Roemer will organize the places on the fair for people who want to show or sell something.

We hope that you make a mark in your notebook for the Atari 8 Bit Fair.
If you are interested in visiting us or call us.

Look at Marek Tomzyk`s Homepage Atari 8 Bit Resort, their is a link to the ABBUC Homepage.
http://rzstud1.rz.uni-karlsruhe.de/~un55/8bit.html

For informations about the fair call:

M. Roemer Tel:

Raimund Altmayer Tel:

Helmut Weidner:

or e-mail me : schallt@fh-worms.de

the telefon numbers follow in the next days !!!! Sorry !!!!

Looks great, but I'm having trouble getting the sound to work. And I've talked with someone else having the same problems. I've tried it under WIN95 and DOS - still no change. Any thoughts?

Also, I'm interested in the schems for the XFormer cable. Anyone?

Forget the auction stuff, why wait? Why spend more than you have to?

I picked up another batch of games this weekend, and want to move 'em
out!

*All games are brand new in the box, unless noted *

!!!! Special: Every $20 spent, pick one free game**!!!!!!!

Atari 8-bit

Frogger $4
Astro Chase $5
Star Wars:Death Star Battle $6

Atari 5200

Ball Blazer $6
Rescue on Fractalus $6
Gremlins $7
Vanguard $4
Pole Position $4
Ms. Pac-Man $4
Dig Dug $4
Choplifter $4
Mario Bros. $4
Star Raiders $4
Missile Command $4
Galaxian $3.50
Moon Patrol $4
Kanagaroo $4

Atari 7800: All games $4 each

Asteroids, Barnyard Blaster, Ace of Aces, Ballblazer, Crossbow,Cracked
Centipede, Donkey Kong, Donkey Kong Jr., Dig Dug, Galaga, Dark Chamber
Hat Trick, Jinks, Mat Mania, Ms. Pac-Man, Pole Position II, One on One,
Ninja Golf, Tower Toppler, Xevious, Xenophobe, Winter Games, Touchdown
Football, Super Huey, Robotron, R.S. Baseball, Joust

Atari 2600

Journey Escape (cart, box docs) $3
Burgertime (cart box docs) $3

Space Jockey (cart) $2
Skateboarding (cart) $2
Oink! (cart) $2.50
Decathalon (complete) $4

Atari release 2600 games $3 each

Mouse Trap, Super Football, Space Invaders,Venture
Solaris, R.S. Volleyball, Gravitar, Othello, Battlezone
Joust, Ms. Pac-Man, R.S. Baseball, Pole Position,
Galaxian, R.S. Football, Jungle Hunt , Phoenix, Kangaroo

Atari Lynx

Bill & Teds (complete) $7
RoadBlasters (complete) $7

Rules:

First Come, First serve.....
$3 minimum shipping (priority mail)
Check or Money Order (no COD)
I reserve the right to do whatever I want (but generally don't)

From: Curt Vendel <cvendel@fir.fbc.com>
Message-ID: <32E51DF8.2781E494@fir.fbc.com>
Source record: 76697

The following Atari Vaporware items are for sale:

1 - Atari 1400XL (working condition, cosmetically near perfect, no 1400xl label.

1 - Atari 1450XLD (Short board version, no disk drive controller) voice synthesiser based on SC-01, 300 baud internal modem.

1 - Atari ST-PAD "Stylus" touch tablet ST computer system mock-up (non-working prototype) Only 4 known to exist

1 - Atari 6402A prototype motherboard (very similar to the Atari 1450XLD TONG version motherboard) Extremely rare, only 3 exist

1 - Atari ABC 386sx IBM compatible laptop computer. Unit is complete and brand new still in the box, everything is sealed. Unit has been tested and has an updated copy of DOS 6.22 installed (disks included).

1 - Atari SALT diagnostic module for 400/800/1200xl computers

1 - Atari SALT diagnostic module for PBI bus tests

NOTE: MAKE ALL OFFERS TO cvendel@aol.com ONLY!!!

686. QIX question

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-21 00:00:00 UTC
From: justin@imperium.net
Message-ID: <32E4FE09.6C29@imperium.net>
Source record: 76698

I have been playing QIX on my 130XE quite a bit lately. I am practicing for when my Lynx II arrives with Qix: The Arcade Classic. I have a question though. I have a version on disk, copyrighted 1982 by Atari. The game runs in Antic mode 13 (BASIC graphics mode 7), has a custom font, and really excellent sound efects. When I was at the Toad Atari fest last October, I bought a cartridge version of QIX, also copyrighted 1982 by Atari. However, the game is entirely different. It runs in Antic mode 14 (BASIC graphics mode 15 - hi res 4 color), the QIX move around the playfield much faster, there is no special font, and the sounds really suck! I was wondering why there are two different versions (both by Atari in 1982), and also if anybody has the good version on cartridge? Any help is appreciated!

I've tried that patch for modifying SpartaDOS to use non-high speed
drives (810, standard 1050 etc). Yes, as feared no matter what I set
it to, spartaDOS failed to boot. Although instead of just hanging at a
blue "boot" screen, it said "ERROR: NO DOS". Hmmm, tried it on the
real Atari and it ran fine. So I guess it'll be up to whoever can
modify the OS in an emualtor to get it running.
What a pity....

Source record: 76700

There are many products out there that allow you to connect standard printers to you 8bit, ICD sound a direct printer cable, I believe MPP did as well, call B&C Computervisions and make sure to ask for Bruce, dont speak with his wife. 408-986-9960

You can use almost any printer after that, I've run print outs from my HP Laserjet IV Plus printer and also my HP Deskjet 600c as well.

You can also order an Atari XMM801 dot matrix printer from B&C which is SIO and doesn't require a SIO- Parallel interface.

The Freddie chip was technology that the Trameils took out of the Atari 1400Xl and 1450XLD systems for use in their XE line of computers, its a MMU chip that allowed the system to more easily control bank selected memory.

Hi Andrew,

I'm selling a Black Box interface. Its an interface that plugs into the back of an Xl or Xe. Its a very nice interface, it gives you a SCSI port for up to 7 hard drives, a high speed parallel printer port with buffer and a high speed serial port to allow to go past the 850 "9600" baud limit. It also has a built-in configuration system, when you hit the configuration switch on the interface it runs a built in configuration system to allow you to customize the interface. You can also buy a disk drive interface to use standard IBM 5.25 and 3.5 disk drives. It sells at CSS for $199.95 If you want it, I'll sell it to you for $75.00 I may still have a spare 120MB scsi hard disk lying around, you can have them both for $125 plus $10 shipping

Curt

693. Atari to IBM...SIO2PC

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-21 00:00:00 UTC
From: dracul@wbris.starnet.net
Message-ID: <9701211603.D7191ft@wbris.starnet.net>
Source record: 76705

Is anyone interested in selling an SIO2PC cable to me? I need it to
transfer files from my Atari to my IBM.
Also, does anyone know of a way to read ROM from Atari 800XL carts so I
can copy them to disk? I've looked, but no one yet has an idea about
how to do it.
Thanx again!

Troy Benoist
dracul@wbris.starnet.net

purchacing
-or trading for it. Any help here would be appreciated. Thank you!
--Bob

No, but it might as well been. It was a "word processer" that
basically allowed the memo pad function to save and load and printer.
And it was HORRID. (Just like KISS!) (Just kidding)

When you find out let me know! I have about 45 ANTICs or so that I want
to sell. I think the OLDER they are, the more they are worth.

On Tue, 21 Jan 1997 12:34:01 -0500, justin@imperium.net wrote:

-question though. I have a version on disk, copyrighted 1982 by
Atari.

This is the 5200 version, hacked to run on the 8 bit.

-fest last October, I bought a cartridge version of QIX, also
copyrighted
-1982 by Atari. However, the game is entirely different. It runs in
-Antic mode 14 (BASIC graphics mode 15 - hi res 4 color), the QIX move

-around the playfield much faster, there is no special font, and the
-sounds really suck! I was wondering why there are two different
-versions (both by Atari in 1982), and also if anybody has the good
-version on cartridge? Any help is appreciated!

Only if someone burned the cart out. My guess is that Atari went with
the crappy version because "the computer's not for playing games" and
its only 8k so it might have cost less to make. Or they released it
first, and lots of people complained that the gameplay sucked.

```
================================================================================
= Cartridge List for the Classic Atari 800/XL/XE Computers =
================================================================================
= Rev. 2.4 January 21st, 1997 =
= =
= Author: Andrew Krieg krieg@execpc.com =
= =
= This list is also available via the WWW at: =
= http://www.cs.uwm.edu/public/krieg/fun.html =
================================================================================
= Welcome to the Classic Atari Computers Cartridge List! This list is based =
= on a list originally started by Kevin Chase. Many personalized versions of =
= Kevin's list started to pop-up, so I have attempted to consolidate every =
= bit of data I could find into one list. I hope you find it useful! =
================================================================================
= Key =
= ------ =
= NR = Never released =
= ?xx = Year of release not known for certain. =
= kbo = Keyboard overlay was included with cartridge. =
= kp = Works with a Koala pad device. =
= lp = Works with a lightpen device. =
= ppt = Requires Chalkboard Inc.'s Powerpad Tablet device. =
= rso = This is a right slot only cart, exclusively for 800 computers. =
= CPS = Consumer Products Service, a division of Atari.
= * = This cart only runs on 400 and 800 model computers. =
= 2 = This cart requires 2 joysticks to play. =
= + = This cart was released more than once in different cart cases. =
= <none> = No catalog # for this cart =
= [O] = Checklist for cartridge ownership =
= [M] = Checklist for manual ownership =
= [B] = Checklist for original box ownership =
= =
= To reuse the checklists, use your favorite editor and replace all of the =
= string patterns "[x]" with "[ ]". You have to calculate your own ownership =
= and ratio values as well. =
================================================================================
= The rarity ratings are still undergoing fine tuning. I would appreciate =
= any feedback on them. It should be noted that common carts for the Atari =
= computers are harder to find than common 2600 carts. They would probably =
= rank as uncommon or rare on the VGR 2600 list. =
= =
= Rarity =
```

```
= ------ =
= C Common These carts can be found fairly easily at thrift =
= stores, in sale posts on the 'Net, or in Atari =
= computer vendor catalogs (yes there still are some =
= vendors!). =
= U Uncommon A little harder to find, but they pop up on the 'Net =
= infrequently. =
= R Rare Very elusive to find carts. Some vendors still have =
= them in stock, but they are generally more expensive. =
= ER Extremely These are very, very hard to find. They usually have =
= Rare had a very low production run. Consider yourself =
= very lucky to come across one! =
= PR Prototype Never formally released. Only pre-release prototypes =
= exist. The ultimate rarity! =
================================================================================
= Total = 348 carts Own = 175 carts Ratio = 50% =
================================================================================

699. Antic Software SPACE BASE

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-21 00:00:00 UTC
From: Roger Sween <emonk@death-star.com>
Message-ID: <01bc0751$23607280$0f6466cf@emonk.cnc.bc.ca>
Source record: 76711

does anyone have a copy of Space Base, by antic software?
It was written by Jeff Mehlman. Its an excellent sky atlas for the atari
and I dont know where my copy went.

Antic Magazine is gradually being posted in HTML form at the following URL:
http://www.northcoast.com/savetz/antic/

So far, all the covers from all the issues and the articles from the first five issues are done, but it's been slow going lately due to lack of volunteers to do OCR. As far as I know, only Kevin Savetz and myself are working on it at the moment. Not sure where Kevin is at, but I'm almost finished doing the April 83 issue.

We need more volunteers to get it all up there. If you or anyone else reading this post are interested in participating, please contact Kevin at: savetz@northcoast.com.

Don't know if anyone has tried to do the same with Analog. (Kevin got permission to post Antic from Jim Capparell, who was its publisher.)

Source record: 76716
Cross-posted to: alt.games.lynx,rec.games.video.atari,comp.sys.atari.8bit,comp.sys.atari.programmer

IMPORTANT NEWS

Due to someone (you know who you are) whining to JTS about the
Howard boards sales, there followed a tense conversation between
John Scruch of JTS and Lance Rinquist of Video 61. The result
is that I have to publicly add these extra conditions/disclaimers
to our sale of Lynx development systems:

1. JTS does NOT support these systems in regards to hardware
2. JTS does NOT support the software for these systems
3. JTS will NOT provide technical support for Lynx game development
4. JTS has specified that we can sell these systems only under these
terms: "AS-IS" and as "Collector's Items"

Simple translation: Don't bother John Scruch anymore. They sold
these units to us and they don't want to hear anything else about them.

So if you want to buy a very special Lynx collector's item, call
(612) 462-2500. The price is still $2000 each. Each one has a
serial number on the bottom and from the ones we have, there were
probably 200 of these units built at most.

I remember the problem when HD disks first came out. If I remember correctly, my Atari wouldn't even format them. Whenever I came across a high density disk, I had to give it away to a friend with an IBM. It seems like you could tell the difference on a 5.25 disk by noticing whether it had a hub ring. The HD ones didn't. (Of course, we also got a whole bunch of generic SD disks without hub rings at a great price at one time...)

Not to get too off-topic here but they are a "supergroup" period. They
have been doing a re-union tour and its been -huge-... I saw their show
in Lousville, KY and it was truly awesome! Catch one in your area if you
can-tis well worth it! :)

> stephen@imperium.net

My guess is that the disk version is an executable of an Atari 5200 ROM, modified to respond to the PORT0 joystick and Start/Option/Select buttons. The 5200 was quite similar to the Atari 4oo computer, but many games were rewritten and improved over their 4oo/8oo counterparts. Centipede is a good example of this. Some 5200 games were never released for the 4oo/8oo series.

Message-ID: <32e5ae25.0@news.total.net>
Source record: 76632

In an article dated 21 Jan 1997 04:20:28 GMT, someone named Dntfear says...
>
>I noticed on the Atari 400/800 game list that there is a Eastern House
>cart named KISS. I was wondering if this cart was related to KISS the
>70's Super Group. And if it is I would be very interested in purchacing
>or trading for it. Any help here would be appreciated. Thank you!
>-Bob

KISS was a word processor for the Right Cart slot on an 800. You'd type in
BASIC program statements for your text, inserting line #s to add, and with 2
or 3 special formatting commands. A USR call would print the text to the
printer.

So, it wasn't a game, and had nothing to do with makeup or tongues.

711. FOR TRADE: Stuff for a 130XE

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-22 00:00:00 UTC
From: dalessio@manatee.cig.mot.com
Message-ID: <dalessio.853904578@manatee>
Source record: 76634

I have a bunch of Atari stuff that I don't need.
What I do need (want?) is a 130XE computer. I'm
willing to trade all of this stuff for a 130XE
(must be fully working and in good shape), and
maybe some games:

3 1050 disk drives
850 parallel interface
2 Atari printers (I can't remember which ones they
are, but I think one's a dot matrix and the other
is a daisy wheel). These are HEAVY printers.

Besides the fact that the 130XE must be fully working,
I also ask that you pay all shipping costs for the hardware
(or, you can just refuse some of it).

If you are interested, or if you want to discuss a
deal, let me know. Thanks.

> \ o o o o o o /
> ------------------

If you are looking at the plug on the cable, top left is pin 1, bottom
left is pin 2. Odd-numbered pins on top, even-numbered on bottom. In
other words,

____
\1 3 5 7 9 11 13/
\2 4 6 8 10 12/

Hope this helps.

Supposedly PC XFormer versions 3.3 and up can use a special version of BobTerm (1.23, I think) that was packaged with 3.3 but never again. But a BBS? That would take some doing. I used the 1.23 and it was barely reliable. I've just d/l'd 3.6 from Emulators, Inc.'s web site, but I haven't had a chance to test it yet.

Meanwhile, I'm also having trouble getting A.P.E. to run my PC's modem, although others aren't having the same trouble. There would be lots of variations from system to system in emulators generally, and the serial port thingis probably more variable than that. I know that XL-It doesn't allow for using the serial ports, and neither does Rainbow. POKEY's developer promised that a future version would use the serial ports on the PC, but that version hasn't materialized.

717. FS: Atari 8-bit games on disk

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-22 00:00:00 UTC
From: pope@rrwilson.ucdavis.edu
Message-ID: <5c5nto$9iq$1@mark.ucdavis.edu>

Hello Atari 8-bit enthusiasts!

I have the following games for the Atari 8-bit line of
computers for sale. All of these are on disk, and all come complete
with their original packaging and instructions. Due to the age of
these games, I will be testing each one before sale to confirm the
integrity of the media. I am asking $3 per game, plus shipping, but I
am willing to negotiate, especially for large orders. Email me at
pope@rrwilson.ucdavis.edu with your order!

It's a utility cart for the right hand slot in 800s and nothing to do with
the band.

Perhaps someone else can correct me if I'm wrong, but I believe the
paddle was just a potentiometer (variable resistor). The computer just
reads the amount of resistance.

What you have there is an Axlon ramboard. I never owned a 'true' Axlon board, so I can't give you all the details. I had an Axlon compatible 256K board I wired from instructions published in a ACE newsletter.

Yours is a 128K board. As I recall, it should plug into the middle slot, with regular boards in the other two slots. I suspect the switch enables the extra RAM; I had a hack on my 256K board to do this (for compatibility reasons).

Try setting it up in the center slot with two 16K boards and fiddle with the switch. You should be able to get a FRE(0) of 37902 (BASIC, no DOS), if everything is working properly.

There is a lot of Axlon software; among other things TopDOS, the Happy Rev 7.x software, and Print Shop Companion uses the Axlon RAM. There is also a version of DOS 2.0 for the Axlon.

BTW, I was able to download the two GIF images, no problem...but what were the "APPLEFILE" files???

I've been using the CSS XF-551 dual mod for years ... maybe close to
ten years. It allows me to have both a 360k 5.25" floppy, as well as a
720k 3.5" floppy. It still works great after all these years, and you'd
be surprised just how much you can fit on a 720k floppy. In fact,
unless you use Spartados (or another dos that supports more than 64
filenames per directory), you can run into filename problems. All you
have to do is credir (create directory) and you can fit a LOT on the
disk.

I heartily recommend it, if you can get one.

Bill

lenspencer@aol.com wrote:

: >match -- 5V, 7.5W DC. But the C64 also offers 9V AC.

: Just be VERY glad you didn't try to turn it on. The Atari XL and XE
: series take a 5vdc supply. +5v is on one side of that plug, return is on
: the other. There is no 7.5v.

That's a W (Watt), not v. :-)

: remember offhand what current the C64 supply can handle, but you need
: almost a full 1.5 amps to reliably operate the 130XE.

7.5 W / 5 V = 1.5 A

See, that's what I was saying, it's much the same. I realize I have to disable the 9v lines (I had in mind to simply cut them) in the C64 power supply. But beyond that, I'm not sure -- the pinout I have for the Atari power supply (which is ambiguous anyway) shows three +5v and three ground. Does only one pair have to be connected, or all three? Can I utilize two of the existing pins in the C64 power supply (with or without rewiring them) to provide the 130xe with all the power it needs? That's what I'm hoping to do.

I remember running into this before. I think the problem I had was the emulator I was using could not format a disk image. I decided to buy the IBM version on CD-Rom. I haven't tried any of the recent emulators yet. Has the new X-Former been released?

Something like that. The paddle pot runs from near 0 to 1M Ohm, with
full resistance (larger PADDLE(x) values) to the left going towards 0 to
the right. Pokey is the chip that reads the resistance, but since the
computer is a digital device, how it does it is by flushing a capacitor
and then slowly building up a charge on it until it gets a voltage that
matches the pot. It then latches onto the value where the match was
found. Full details can be found in Mapping The Atari from Compute!
books.

>Perhaps someone else can correct me if I'm wrong, but I believe the
>paddle was just a potentiometer (variable resistor). The computer just
>reads the amount of resistance.

Yes and no.

Close, but no banana.

Yes, the paddles are just potentiometers.

And, no (a very picky no), but I bet the computer is reading a voltage,
not a resistance. The two values are proportional to each other. I think
there's a voltage going TO the paddles on 2 of the lines (probabaly a grounded
line and a +5V), then that goes through the potentiometer, and comes back
at some lesser voltage back FROM the paddles to the computer on another line
(using the same ground). Then, the Atari takes that voltage, runs it through
an ADC (analog to digital converter) and changes that analog voltage value
into some digital number (probably 0-255).

Of course, this is all conjecture based on other electronics work I've done
and not on specific Atari experience, so be sure to take your grain of salt.

If somebody made a "redesigned" Atari, they should increase the size
and durability of the keyboard.

Sounds like you have never used a 1200XL keyboard.

Sounds like he never used an Atari 800. That was a good keyboard.

Sounds like he never used an Atari 800XL keyboard. That was a good
keyboard. Its the 130XE that sucks. Carbon traces on mylar? Good grief!

...Indeed the original 800 had an excellent keyboard, the 800XL as I
remember was a little too soft. The 130XE was simply dredful, exceeded
only by the Timex/Sinclair ZX-81/TS1000 which didn't claim to be a
keyboard.

For me there was nothing like programming using the Action Cartridge. It
was amazing, reviewed in August 84 by Analog Computing, and nothing like
it appeared on the Commodore64 et al. I still have an 800, and 2 1050
drives. I keep them for that experience if nothing else.

in my toms 720 disk drive manual i was told not to use high density disks because of some differences. i don't remember exactly, what it was, but using dd disk would not cause such problems.

735. FS/T: XF551 DSDD disk drive

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-22 00:00:00 UTC
From: mbates@s3.sonnet.com
Message-ID: <mbates-2201971902280001@ppp13-stk.sonnet.com>
Source record: 76658
Cross-posted to: comp.sys.atari.8bit,rec.games.video.marketplace

I have an Atari XF551 (DSDD) for sale or trade. I am thinking around $40
plus shipping or I will trade it for any of the following:

Atari 8-bit cartridges I do not have
TurboGrafx-16/TurboDuo/PC-Engine Games I do not have
Sega CD games I do not have
(do you sense a theme?)
Jaguar Games I do not have
Sega Genesis Games I do not have
(you really should have sensed a theme by now!)

I also have the following for sale/trade:

800XLs with power supply working $30
1200XLs w/ power supply $25
1050 disk drives with power supply $25
1027 printers with power supply $20

Thanks
-marlin

Having received no offers on a previous post BBS Express! Professional (tm) for the Atari 8-bit is no longer for sale.

Stephen J. Carden programer for this in the past has relented to the pressures of the IBM and has moved on to a higher platform of programing.

I Robert Klaas/dba K-Products now own all Rights to BBS Express! Professional from ver 1.0 through 5.0b. Any negocations for Source Code ect will have to be through K-Products as of 1-22-1997.

We have added two more issues of Antic Magazine to the Digital Antic Project since the last time I posted an update to Usenet four months ago. In addition, we've added new cover images.

The Digital Antic Project is a small crusade to put all of the old issues of Antic magazine (and eventually its sister magazine, STart) on the Internet. I have received permission from the publisher of Antic to make the material available on the Internet for free.

The site currently features the complete text of six issues, as well as cover art and memorable ads from the magazine. More material will be added as time permits -- faster if YOU volunteer to help by scanning, HTMLizing, or proofreading.

Check them out at http://www.northcoast.com/savetz/antic/dap.html

Here's what's new...

December 1982 - Vol. 1 No. 5

Great Ceaser's Host - Ruminations on real-time computer clashes
Atari Tree - He's scheming up a white Christmas
Model Station - A word-processing system for Atari
Holiday Crossword - Puzzle-generator product
Oh Holy Night - Pastoral scene with music
Joystick Survey - Alternative controllers

: graphics. So keep up the great work on XL-it, I have already found a
: great use for it. I was trying to UN-DCM a file, which was disk-commed

Is this better than pokey? When I first started messing with Atari
emulatoion I got XL-it and PC Xformer, and although they work fine, they
still had a few annoying bugs like long command lines and no PC joystick
support. However, when I d/l Pokey it had joystick support most of the games
I tried worked fine, the collison support was better than the other emulators
I've tried, and the ATR file selection was a lot easy to use. Pokey still
doesn't have sound support, but otherwise I was impressed with it, anyone
else like pokey?

746. File Manager!

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-23 00:00:00 UTC
From: read@my.sig
Message-ID: <32e899d5.2242807@news.networx.net.au>
Source record: 76577

I have seen requests for a decent File Manager that will run on MyDOS, and also SpartaDOS. I have an idea for an X-Tree Gold type File Manager, which will read an entire disk including ALL directories and ALL files contained within. It should scroll through the directory listing, and have many DOS features for managing the files. I'm going to start work on this rather daunting task, and if anyone has any ideas or suggestions for what they would like to see, I would cerainly like some feedback. Thanks.

Steve.

> tried both COM ports and even tried changing the values of 'extra safety
> margin'. What else could be preventing it from working?

After reading InfoMan's message (see SIO2PC - mine finally works!), I decided to check the voltage levels coming out of my serial port on the PC, and things didn't quite look right. So I rechecked the SIO2PC documentation to find out which serial pin had what function, and guess what: I discovered that on pins 2 and 3, I was reading the pin numbers for a 25-pin connector instead of a 9-pin connector! (They're opposite from each other.) So I reversed the wires and now it works great.

Now if I could just figure out why APE doesn't want to load the ATR files I got from Jellystone Park...

Nevermind. I just now figured out that if the ATR file is marked
read-only, APE won't load it. I thought that would save me the trouble
of loading each ATR file and write-protecting it in APE, but I was
wrong.

It'd help if you gave us a little more info on what you are doing.
Anyway, for most emulators an ATR file is placed on the command line
when starting the emu.

eg: XFORMER GAMEDISK.ATR
or XLIT GAMEDISK.ATR

You can specify up to 8 ATR files this way. The EMU then has the image
files as virtual disks when the EMU is running. so in the example
XFORMER GAMEDISK.ATR
the ATR file becomes D1 (or the "boot drive"). The first ATR file must
be a bootable disk, either having DOS on it, or a self booting game.

Yes, it may have... now if everything everyone did upset us and we all started flaming then this wouldn't be a very nice place to be would it? Hence why we have nettiquite and do our best not to offend. An yes, on the internet ignorance is an excuse since there are no rules written for all to see.

> His comments were appropriate compared to yours. This is not a binary

Brief update; works now! Thanks to Scott Charles. I didn't have
DOS.SYS or DUP.SYS in the Eastern Front ATR.

That's interesting - I hadn't noticed that yet. Does anyone know why
they can't be write-protected? Does APE actually write to them?

Thanks,

Erm, no it won't. DRAM is DRAM, whether it's assembled into a SIMM or
not. The memory controller always has to refresh it.

Ok, here's the error code list as it is in the 130xe manual. I'm sure
there were more codes than listed, so I will update it when I find a
source for them. I wanted to place this on my Home Page, but for some
reason the files haven't turned up there yet. Anyway, at least now
you'll know what "that error code" means. I've also attached a pinout
list in case you need this anytime.

I wouldn't bother with PC Xformer 3.6, I've just seen it and I think
it's terrible. According to the auther, 3.6 will emulate a 130xe on a
486DX2-66 at a speed about 9 times that of a real 130xe. I ran it on
my 486 DX2-80, and sure enough it runs about half of the speed of a
real 130xe, even with scroll-lock off (apparently turbo mode?). I
tried running MULE- couldn't read any text. I tried running MERCENARY-
again no text. Tried a dozen or so other games etc, most ran pitifully
slow, and as for the sound- well, I sticking to my REAL 130XE!
I am more impressed still with XL-it 0.16, even tho I don't have
sound, I prefer an emulator that DOES show everything from text and
graphics. So keep up the great work on XL-it, I have already found a
great use for it. I was trying to UN-DCM a file, which was disk-commed
into 5 or 6 parts. My real Atari system WOULD NOT write the
UNDISKCOMMED disk, as it was in enhanced density and for some stupid
reason would ONLY format in single density. I tried all sorts of ways
to get this written, but had absolutely NO luck. I then proceeded to
try XL-it with DISKCOMM, and copied an E/D disk image to write to.
BEAUTIFUL!! Diskcomm ran without ANY hassles, and then I was able to
load up the (FINALLY) un-DCM'd image- YAY!! So even for the REAL Atari

computer users, emulators have a great usefulness over the real thing.

Steve.

Well, I hate to be backwards but-- I just tried SpartaDOS 1.1 on XLit
and PC Xformer, and am happy to say that it runs just fine. It's a
pity they had to change SpartaDOS so much in the upgrades that it
simply won't work with any emu's. So if anyones interested in a copy
of 1.1 I might place it on my Home Page.

Perhaps you could simply look at the SIZE of the message *BEFORE* you
download it...
that way you wouldn't spend your time d/l'ing a message you do not want.

Or perhaps you could ask the person in a much better way to please not post
binary
picture files on a non-binary newsgroup (not newgroup). Flaming (which is
what you
are starting to do) is not a good way to converse and all it causes is
headaches
and frustration for all invloved. Please think of this before you click
'send' next

Message-ID: <c615681.21.32E6D9AE@mizzou1.missouri.edu>
Source record: 76667

Hi all. I found this Gauntlet disk over the weekend. It looks like it is in great shape! It also has the box (well the folder type thing). It is for the atari 800xl, 65xe, and the 130xe. I can't test it because I don't have these computers handy. I will trade or sell it as working, and will gladly reverse any transaction if it doesn't work. I may possibly be able to test it at a friend's house too, but currently I can't get a hold of him.

Anyway, I am interested in cash, or trade offers. Trades are a priority, and I prefer to trade for atari 2600 items, though I'll consider anything classic video game related.

Thanks, Brett Fuehring

:
: Greetings from me !

The paddles, if I recall corectly, are just Potentiometers. For laymen, the computer measures the resistance on the line, divides it, and says this is the number between 0 and 255 (maybe). This is how many of the software protection keys work. (Yip any good ole paddle controler with a way to maintain exact position will be an excellent tool for using that old word processor or database program.) Anyhow I'm not sure on the resistance range that the paddles send back. I'm honestly to lazy to look it up. As its not that important to using the paddles with the Atari.

There is a memory location you poke which causes the POT (1-8 for each paddle) to retain it's value until it is changed. "Locked Trigger" also seems familiar. So have a variable of your own which contains the old value, then in a loop read the pot location until it is different. Then if it is less than the old number (do something), if it is greater (do something else). Or more practically like in the old CIRCUS game or Kaboom, Divide the screen width by the range of the pot, or visa versa if the if there are more resistances than pixels in your resolution, and just place the PM Based on the value.

Do you still have your Action! cart? I have been using mine a lot lately,
with two projects going at the same time. I am still trying to get my BBS
program to where it will run, and I have a chess program I have been
working on sporadically for the last several years. I hope to have the
chess program playing on FICS by spring. After that, who knows? dB^)

I 've seen it and I think that it's good. Is better than Xl-it because some games which not works on Xl-it works on Xformer 3.6. I tried some games (at the lessons so i havn't so many time) and i think that on the Pentium 70 emulator works at 140% power of atari (behind 80% and 200%). It depend what program do. I trien with "Invitro on Copy Party'97" by Shadows group and this works some faster (in turbo mode) than real atari. Of course still Xformer have bugs. For example the PMG-graphisc is stil over the screen. Never under the piksels.

I know what you mean. Actually, XFormer does what I want sometimes. I'm not a gamer, and Darek has stated many times that his emulators will not run software that was originally copy-protected. But my user group puts out a newsletter on floppy and I'm the editor. I use SIO2PC to speed up duplication of the disks, so I have .ATRs of the latest issue handy. If I want to print something from a previous issue quickly, that' s the way to go. But don'ty try using XFormer for anything with sound if you have an AWE-32 sound card!

I don't think we're going to see perfection very soon in any emulator or combination of emulators, but I want the process of development to continue, because it will help to keep the community alive.

There is a trick. You can format a 5.25" high density floppy with DOS 3 (yes, it is good for something) and then go over it with 2.5. Again, anything you write to the disk may deteriorate much more rapidly than writing to a DD disk, but in a pinch ...

Thats very true. I guess I'm just being picky :)
I commend the authors of XFormer, XLit and Pokey, and any of the other
emulators, for their vigilance in trying to keep the 8-bit alive. I
know nothing of programming a PC, or any other besides the Atari
8-bit. (Lord knows, I have enough trouble with that! :)
So, I really shouldn't be complaining about what the EMU's can't do,
and praise the authors for bringing many "ex" Atarians back to life!

SpartaDos X includes a menu program that does that; it only lacks the split
screen of Norton Commander. Being able to see source and dest directories
would be really nice.

**********I have made my own set of paddles since
I figured it would be easier
than trying to find a used old set. I used a 500k Ohm linear taper (not
an audio taper) potentiometer and it worked fine. I read in a FAQ
somewhere that Atari's used a 1 Megohm pot - this gave me half a
rotation of the pot that was unusable. The computer reads the value of
the pot by charging a capacitor for a set clock time. The value of the
pot sets the amount of capacitor charge - a very crude A/D convertor!
However, it does allow the programmer to use the paddle alues as an
accurate timer.

Smartass, would you please read RFC-1036 regarding Message-IDs and
news.announce.newusers "What is Usenet?", esp. this passage:

8. Usenet is not the Internet.

The Internet is a wide-ranging network, parts of which are
subsidized by various governments. It carries many kinds of
traffic, of which Usenet is only one. And the Internet is only
one of the various networks carrying Usenet traffic.

So, have a look at the UUCP protocol (which is another widespread one
in Usenet) and you will find out that a selection by article is not
possible with it.

>Hence why we have nettiquite and do our best not to offend. An yes, on the

Excellent article. I must admit, this was the first news I've heard
of Atari's demise, and I am truly sad to see it go. Other than the 2600,
which almost everyone had, my first exposure to Atari computing was only
5 years, when a friend talked me out of buying a COmmodore 128 in favor
of a 1040 Ste. He's long since switched to a Pc, but I still hang on,
even now that I've upgraded to a Falcon.

To some great years, and a lot of fun with them, Goodbye Atari :(

791. Confused about disk sides

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-24 00:00:00 UTC
From: Thomas Main <main@conrad.appstate.edu>
Message-ID: <Pine.PMDF.3.95.970124155648.643830640A-100000@conrad.appstate.edu>
Source record: 76614

I am confused about the way the Atari 8-bit uses disks. I have seen disks that have data on both sides - literally. You have to flip them over to access data on "side 2." Does this mean that when I buy a pack of disks, I can format and write data to both sides? I have an unmodified 1050 drive, which gives 130K in ED mode - can a double sided disk hold 130K on each side (130+130=260 total?)

Why don't other computers use this system. I have never heard of flipping a disk on a PC or ST. Any help would be appreciated.

Thanks,

-Thomas

792. The Return of Atari DOS file system

I'm sorry if I have nothing relevant to add to this discussion, but a
while ago, I was fixing my powersupply (it frtized out). When I did a
voltage test it didn't register 5vdc like the label says. Anyway, I
finally built a new one, and even though the output of the thing was
5v DC, it didn't work. So, I finally figured that the Atari 800xl's
power supply needs 6v DC, not 5v DC like the label says. How's that
for a misprint????

BTW: I'm talking about the black brick power supply. And, while I
fixed the power supply, I can't fix my joysticks (just way too beyond
repair) so I'm looking for a replacement pair with the fire button
(preferably, not required) on the the top of the stick. Please respond
with any offers...

Yes, but you have put a notch on the other side in order for the disk to work correctly. Basically, you just need a hole puncher, put it half way in (opposite to the place where the regular square hole is) and punch away. Just don't get too close in, or you'll mangle the disk. <g> (The best way to do it is to just line it up with another disk). If the drive doesn't acknowledge the disk when you try to format, it means your hole is misaligned. Anyway, it's a common practice. Despite some claims that using a SS(single sided) DS (double density) disk is risky if you use the "flip" side, I never lost any data from doing so, and many others have done likewise (even the pros).

> Why don't other computers use this system. I have never
> heard of flipping a disk on a PC or ST. Any help would be
>appreciated.

They don't use that method, but they *do* use both sides without you needing to take out the disk physically and having to flip it...

798. FS: 'The Chip" software and manual

The drive is long gone with "The Chip" which is a Disk
Backup/Developement System designed for the Atari 810 Disk Drive.

But I still have the manual for "The Chip" by Spartan Software of
Minnesota in its original case with the Archiver/Editor Program Disk.

Any Interest? Make an offer. Email me

I have the following Atari Hardware and Software available as of
1-25-97

EQUIPMENT:

2- Atari joysticks

Antic Magazine Software Disks

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Take any of the above books for $5 & SH or
Take all three books for $10 & SH

SOFTWARE:

Most include manual/instructions

1. THE NEWSROOM (5 disks with lots of clipart)
this is an excellent publisher $20 & SH

2. THE PRINT SHOP - a excellent bundle including:
The Print Shop
The Print Shop Companion
Three Graphic Disks
Holiday & Special Events Graphics Disk
No Frills Software Fonts & Borders 1

7 Total disks $20 + SH

3. TYPESETTER by Xlent Software $5 & SH

4. MAGNIPRINT by Alpha Systems $4 & SH

5. a 3 disk bundle by HI-TECH EXPRESSIONS include:
CardWare
AwardWare
AwardWare Graphics $8 & SH

EXCELLENT GAMES AVAILABLE:

1. KARATEKA by Broderbund
excellent Karate game $5

2. MICROLEAGUE BASEBALL(1984) $5

3. LEADER BOARD - Dual Pack
Excellent Golf Game includes
Double sided disk with the LEADERBOARD
on one side & Tournament on other $5

4. HACKER
a simulation games that forces a player to
hack their way into a system. This
game purposly comes with no instructions $4

Take ALL the above software in a disk case for $50 & SH

---

40 Blank 5 1/4 Disks $10 & SH
with disk case $13 & SH

Money order or personal check (with stuff being sent out when check
clears).

Buyer pays shipping.

Make offers including shipping.

The first post really is about how 3rdPlanet was fun to access with
a working ...ALIVE 8-bit computer...and it was fantastic .. to
it from the GROUND zero..(That is, with an 8-bit computer).

The 2nd response is to let any REAL 8-bit computer users..that are
Atari left out there on the Fricken Phone lines that Yogi and
Portland Atari User group has gone the way..an GONE OFF LINE..

Believe it or NOT, there is still a BBS operating in Cleveland
that is 8-bit and has an supporting 8-bit user group. Of course,
we even write programs for the 8-bit still..UPLOAD to that BBS.

Now is there are any other questions..well we are still here and
virus free..on Part-Time BBS 5821196..yes, it's long distance..
but still going...

Strong..sometimes..hehehe..dude don't sweat it..

Read between the lines - whatever Darek says! It's just a bad excuse from
his side! XF also doesn't work with lots of PD and commercial games that
have never ever been copy-protected! I know what I'm talking about,
because XF doesn't even run most of my commercial programmes! The problem
with XF is that Darek is apparently uncapable of fixing the disk routines
and several other things. Yes, XF is fast, but who wants to play games at
200% - 300% or so of the original speed? It's only good for utils or
programmes using simple graphics - but that's it! In my personal list, XF
ranks as the worst emulator and XL-IT! and RAINBOW as the best. Even POKEY
is far better than XF (if you forget about speed!). Fortunately Darek
stopped charging people for - erm - """"updates"""" which really were (and
are!) too overpriced (hm, that policy very much reminds me of the company
he is actually working for ;)!).

> I don't think we're going to see perfection very soon in any emulator or

>
>Well as it says I'd like to know if they work. I recently got a 800XL
>(basic doesn't work) and it can run Star Wars Return of the Jedi Death
>Star Battle perfectly...it WON'T run Astrochase (for 400/800/1200XL) or
>Demon Attack (same systems). Any way around this? I can't seem to get
>those to work. I know the carts are in perfect condition cuz I bought
>them brand new in shrinkwrap. Any help would be appreciated. Oh and when
>I try to run them it just comes up with the screen and a cursor but I
>can't type anything.
>
> Thanks,
> Tim Polucha

There are a certain number of programs that die on an 800xl; Demon Attack and Astrochase are both on the list. In re-writing the OS for the 600xl/800xl, Atari kept to their published guidelines. Unfortunately, some programs broke the rules and died on the new systems.

Your options are:

Get a 400/800 for those games; or

Get a replacement for the 800xl that will run the software.

Good luck,

>
>Why don't other computers use this system. I have never heard of flipping
>a disk on a PC or ST. Any help would be appreciated.
>
>Thanks,
>
>-Thomas
>
The Atari (like many other early systems) used a single-sided disk drive.
Data was only written or read from one side.

Later drives, like the XF551, use both sides, so flippies won't go; you can
use them on such drives but it's not advisable.

On a 1050, you can flip disks to double storage, but there's a downside:
the inner liner on a disk is designed to catch dust etc. If you flip it,
the rotation goes the other way and the dust and other crud gets spun back
out onto the surface. It's a very low probability of damage, but it's
there. I sued to flip disks, but now have moved to a double-sided drive,
so it's moot.

The ST didnt flip disks because 3 1/2" mechs won't let you (the disk only
feeds one side up). The PC was late enough in the evolution of disk drives
that it used double-sided drives (except for some of the very early models)

It's a great idea, and should even look good in a two-color, 40 column screen.

Why set such difficult display goals when functionality is what we really need?

BTW, a member of one of my user groups was on the way to developing something like this when he was tragically killed in an accident some years ago. His system didn't have the two columns (source and destination) but it did handle Sparta and Atari DOS in the way that was described in the first message on this thread. I think the MyDos addition would have been the next logical step.

813. Re: DOES ANYONE RECOGNIZE THIS?

Why not settle the thing without any rancor?

The pictures were great. I've printed them out in color and I'm going to see how many guys in my user groups can identify them.

There is no way to get a message size from a header in Usenet. AOL puts long messages up with a header that says the message is too long to be read offline and describes how to retrieve and read or download it online (More profit for them? Not at a flat rate!)

A newsgroup called alt.binaries.atari DOES exist and is an appropriate place for such messages. I had no trouble getting AT&T Worldnet to carry it, and to carry alt.binaries.atari.d, but AOL won't carry alt.binaries.atari.d. I know that these two groups are beset by spammers, but if you can weed through that nonsense and pick up the files you want, there's no big problem.

One-processor? Need I remind you that around 1987, the primary 8-bit
computers were pretty much all run on 6502s? At least all the Commodore,
Atari and Apple machines were running on these.

>media is 600 oersteds (the same as 3.5" double-density media, BTW).

Look at what you quoted of me above. I say there that the DD & HD
disks have _different_ coercitivity. I do not say which one has
which, at least in what you quoted from me. I also said that a
different head write current is used for the two kinds, and I _did_
specifiy which has which. I said that DD requires use of a HIGHER
write current than HD disks. That statement is ABSOLUTELY true.

When HD disks were developed, engineers realized trying to do so with
the same materials and procedures as DD disks resulted in magnetic
domains that would "bleed" into and affect one another, thus degrading
the data integrity. In order to prevent this from happening at the
new track and bit densities they wanted for HD, engineers changed
three basic variables to stop the domains from bleeding:

1) made the media thinner
2) made the media have a higher coercivity rating (harder
to record a magnetic signal)
3) LOWERED the write current of the head used to record
the data.

Now, what you are thinking is... 'higher coercitivity goes with higher
write current'... which you would need _if_ you wanted to the same
signal strength. But the target signal strength is to be lower, so a
combination of the write current being lowered in conjunction with a
higher coercitivity was used.

Cheers,

Jon

The current FAT system uses links similar to Atari DOS. NTFS and
possibly FAT32 use mapping similar to SpartaDOS. I had to laugh at MS
that it took them so long to come up with a better FMS. SpartaDOS has
been doing it on the Atari since the early 80's. But then, it took MS
until DOS version 5 to replace the junky EDLIN with a full screen text
editor (EDIT). Go figure.

821. Re: QIX question

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-25 00:00:00 UTC
From: Mr.Maddog@mail.ptd.net
Message-ID: <19970125224425.6308.qmail@mail.ptd.net>
Source record: 76495

In compairing the 5200(hack) and orginal 8-bit cart...

: -fest last October, I bought a cartridge version of QIX, also
: copyrighted
: -1982 by Atari. However, the game is entirely different. It runs in
: -Antic mode 14 (BASIC graphics mode 15 - hi res 4 color), the QIX move
:
: -around the playfield much faster, there is no special font, and the
: -sounds really suck! I was wondering why there are two different
: -versions (both by Atari in 1982), and also if anybody has the good
: -version on cartridge? Any help is appreciated!

Sounds like the 8-bit has a special graphic mode used in the game, 5200
has no built in font so it uses custom ones, can't see how they would have
different sounds from the 5200 since they have the same sound chip.
Though the effects sound like Asteroids, I don't mind them.

Two possible reasons why the two are different even though the 5200 and
the 8-bit are basically the same.

- Some 'stupid' competetion between the video game and computer
divisons

- With the 8-bit having it's own built in graphic modes and font,
much easier to just use them though they clearly scream "8-bit
computer!"

I don't mind playing the 8-bit cart although I wish I can get the ST
version by Tatio :)

Sorry, but I have to say that I am laughing loudly now. It's pretty
absurd to think that something like the Atari DOS will be used in a modern
OS. Atari DOS is "linked" because each file is a linked list: the last
three bytes of a sector are a pointer to the next sector in a file. This
is a horribly inefficient method of keeping track of which sectors are in
a file. For example, you cannot do random accesses. If you want to open
a file and move to the end to add some more data, you have to read the
whole file.

>

Most Atari 8bit drives are SSSD (Single Sided, Single Density). The 1050 is SSED. (It is really still single density, it just packs more sectors per track on the disk). So, yes, you can notch your disks and use both sides. (XF551 Drives and a few other work slightly differently)

>Why don't other computers use this system. I have never heard of flipping
>a disk on a PC or ST. Any help would be appreciated.
>
>Thanks,
>
PC's use DSDD drives. They already have Read/Write heads on both sides of the drive mech. Thus, you don't need to flip the disk, it knows where, when, and how to write to both sides.

>a disk on a PC or ST. Any help would be appreciated.

To answer your first question; yes, you can format and use each side
of the disk. Double your capacity! You need to cut out a write
(un)protect notch though symetrically to the original one. To answer
your second question, the reason you haven't seen this done on other
systems or drives is because you most likely have seen only double
sided capable drives. Double sided drives have two sets of heads (one
on top & one on bottom) and utilize both sides of the disk
automatically. Both sides of the disk are treated as one logical
volume.

Cheers,

Jon

829. Paddles, How do they work ???

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-26 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <32eb6aec@pianosa.demon.co.uk>
Source record: 76502

Whilst reading the usual rubbish I find here, Michel Bieleveld wrote something interesting to All about Paddles, How do they work ???:

Hello Michel,

MB> want to know how I can Address the Analog signal from the Paddles, and
MB> wich electronic parts are used in the paddles. I hope some one will

The paddles were just variable resistors. One end wired to +5V, the other to 0V (Gnd). The 'wiper' was wired to a third pin on the joystick port. Essentially, the circuit is a voltage divider. The Atari returns a numeric value based on the relationship between the +5V & the voltage on the wiper.

Somebody reckoned the value of the pot was about 1M Ohm. I'd have to disagree. First, from memory, a value of 10k sticks in my mind. Second, 1M would give current in the micro-amp range. Whilst this in itself makes little difference to a *voltage* divider. If the current flow is too low, external influences come to bear. In other words, just moving your hand near the paddle cable will make bad things happen. That is, affect the output.

Either way, pin-outs are available form the usual sources. But without a lot of searching, I'm afraid I can't give you the exact value of the paddle control resistor.

Further, people have indidcatd that the output range was from 0-255. Again, working purely from memory, a lower bound of 10 sticks in memory. An upper bound does too, but I can't pin it to a number. There are several reasons for the limits. First, is that the readings become unreliable towards the extremes of travel on a pot, and second, moving the cursor/sprite/whatever, too far results in them being pushed off screen, resulting in a Cursor Out Of Range, error.

: simply won't work with any emu's. So if anyones interested in a copy
: of 1.1 I might place it on my Home Page.

Yip, that just about proves what I was saying. Sparta 1.1 doesn't do any under the Rom placement. (as I think this is also the only version that works with the 400/800) The down side to 1.1 is that there is a bug in the COPY command with reguard to copy E:*.* D:*.* or E:, the destination *.* expands to ????????.??? and is written as a hidden file, and the source gets deleted. Also 1.1 leaves less happy memmory available (not hiding under rom anymore) and Copy uses page 6.

Anyhow, I think I'm gonna get me Bewedos. It sounds like a winner.

Well, I just recieved a copy of SpartaDOS 3.3a which still runs fine
under the EMU's. I'm not sure just how much memory this version uses,
but if anyone's interested in trying it out I have it posted on my HP.

Cheers, Steve.

That is such a pity, it sounds like he would have written some
excellent software. A true loss to the Atari community.

Thanks for the input guys. When I saw the note for an 80 column
display I went and dug out my old VIDEO 80 disk, which has a device
handler called V:. I was wondering when and what I could use to put it
to good use. Anyway, I have had to re-write the code to make it run
under MyDOS, and now it also runs under SpartaDOS. Good stuff, now all
I need to do is write the program :). BTW, does anyone object to the
name X-TARI for the file manager? I didn't think much of it at first,
but it just sorta stuck.
That is a great idea, using an 80 column display. It will certainly
make it easier to display lots more text, including the sub-dirs. If
anyone wants the AUTORUN.SYS file which creates the V: handler, let me
know. It's great fun to muck around with if anything. The font that
comes with it doesn't really display too well, but is ledgible.

Thanks again guys, keep up Atari support.

Steve.

I have just found out that there is emulators for the Atari 800 XL. Now that I now this I would like to know if anyone remembers an old game called firebug. It was really fun and I would like to find it again. If anyone knows where I can get it to run on an emulator like rainbow, please e-mail me at lvalkar@sowega.net.

Thanx

Xformer 3.6 runs Encounter on my Cyrex P166+. That's all I've been waiting for. I don't use the sound option in Xformer for anything, but the Pilot programming language for kids, where it works fine, or basic programs that use only tones, with no distortions.
It runs Pacman, Defender, Donkey Kong, and Joust just fine graphically and with joystick support. I like how fast it runs basic programs. I like running 3D Maze Escape from Antic Magazine in fast mode. Wow!
It runs Shamus well, even though the walls in the maze don't look exactly the same. I guess the only time it has problems is when the PC hardware can't keep up with the multiple display list interrupts that some games employ, but version 3.6 is the first emulator I've tried that runs Encounter, so things look promising for the future. It's funny though that we might have to get PCs up to 300-400 MHz before a complete emulation of the 1.8 MHz Atari 8 bit is possible...

I have a modified version of x32d.dos called x32z.dos. I am also using
the Ultra Speed Plus OS from CSS and in the docs, it suggests modifying
x32d.dos to use the Atari standard IO. This patched version of x32d.dos
DOES WORK with Xformer 3.6. I am using APE and my 16 mb hard disk image
boots right up with this dos.

I seem to recall there was a company in the land down under (Australia)
that was producing a XL compatible OS for the original 800s. I can
remember which magazine it was in, but the company the did a bunch of
uprades for the vernerable 800!

Source record: 76524

(I was gonna respond to msg. but 'help!' doesn't describe anyting.)
(Somebody asks about read/writing A8 disks on PC.)
I'm glad you asked. I've done some head work on my own
PC<->A8 5.25" read/write prog. Yes, to answer your question,
'Myutil' or 'Util' from Charles Marslette will read/write A8
disks on PC. BUT, Mr. Marslette's 'Util' has some
limitations, notably unreliable transfers.
My programs are sector based, not 'file' based, so it
doesn't matter (theoretically) what DOS you use. 'Util' must
use MyDOS (Mr. Marslette wrote or helped write that too, I
believe.)
Mr. 'Steve' from Down Under, mentions that his www site has
'Util' and/or 'Myutil'. But since he seems to think they
work ok, I suspect he has an older 360k pc floppy. 'Util'
does work better with a 360k floppy. And works pretty
reliably with a 360k floppy IF you use a clean disk, one
that hasn't been written to by A8 or PC before.
The other day, some folks (I didn't remember the names)
talked about oersteds and stuff on HD vs. DD disks. (By the
way DD disks almost always have the 'hub' ring, HD disks
don't have this ring.) Where was I?
Oh, yes. Head work. The discussion of oersteds and stuff got
me working and I know what will (theoretically) make my
progs. work much better.
Mr. Marslette's 'Util' was written before much 1.2 meg HD
5.25" were around and definitly, the assem source code
doesn't have the necessary code to make formats using a pc
HD drive work. Int 13, ah 17 and 18 will set the pc floppy
controller to format tracks on a HD drive using the LOWER
currents necessary for DD disks. Normally, and also in
'Util' code, the current is too high for DD disks. This is a
long way to thank the people discussing this for getting me
on the road to recovery. I mean I think I know how to modify
my modified Marslette code to do the IDEAL thing. Set the
controller to format/read/write DD disks on the PC. Then,
one must use the HD pc floppy to format the DD A8 disk. This
will result in a narrow track, but the correct 'strength' of
recording. If the disk was clean, then there won't be any
'bleeding' or 'confusion' from a too high recording current
or from a too wide track (from A8 format/writing.)
Boy, that was long winded and thanks and I hope to get to
this in the next months, but now I'm pretty sure I know what
to do.

As far as I know it is very similar to what I have installed in my
130xe- SUPERMON. It is a built in moniter which can be used to access
the Atari's memory directly, and also has a host of features including
disk I/O, disassembler, trace, list etc... Excellent for seeing
exactly what the computer is up to.

BTW, I have tried the SUPERMON ROM under PC Xformer, and it works
great. It has a few probs under XLit tho.

There is a program called UTIL, which can read and write ATARI Double Density disks. Thats the only stipulation, it cannot use single density disks. So you would have to convert the disks from single to double density. But I am guessing that you are actually talking about GAME disks? (ie: NON- DOS). No, I don't think there is any utility that can read Atari disks directly. Only file transfers are supported, which work very well too. UTIL also will convert TEXT files while reading or writing them (ie: ATASCII > ASCII and back).
If you want UTIL, check my Home Page for a utility called MYUTIL.ZIP

All you have to do is use the DOS [L]oad function to load the
directory name. You will see an error from DOS, but if you list the
directory again, you will see that the directory has changed.

-snip-

Actually I do use a 1.2 mb disk drive, but as you say UTIL does work more reliably with a 360k drive. I remember someone telling me that it is the RPM of the disk drive that affects the disk I/O. Something like this:- the 1.2mb drive spins at 300rpm, while the 1050 drive spins at 288rpm. If you use the XF551 disk drive, that does spin at 300rpm, so will be more reliable if used to format the disk first. I did have an XF551 drive, and tested this theory out. All the disks I formatted using the XF drive worked fine in the 1.2mb drive, while 1050 formatted disks almost always had problems. For me the 1.2mb drive works ok using a disk formatted on one of my 1050 drives, but I think the head alignment may be out on the 1050, cause I have lots of trouble reading those disks on another 1050.
Yeh, I know UTIL is only for DOS based disks, which is a real pity. It'd be great if someone could write a new program to read an Atari disk sector by sector on the PC's drive. I'd have a go myself, but my knowledge of the PC is very limited when it comes to writing programs. I have seen a couple of programs that claim to be able to read a single density disk, but I can't seem to get them to work. (They are not actually written to copy Atari disks, they simply read any disk sector by sector). One was called "ANADISK", and the other "DEANA". I can't remember the URL where I found them, so if anyone wants to have a look at them, let me know.

Steve.

861. Sparta on an 800?

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-27 00:00:00 UTC
From: Chris Gill <Fuzball@nznet.gen.nz>
Message-ID: <268.6966T1100T2461@nznet.gen.nz>
Source record: 76531

Hi all...

Is there a hardware hack / cart available that will allow an 800 to run sparta
and XL/XE software? I have an 800XL that is kaput and am down to an 800...
most of my programs are on DSDD sparta formatted disks, and I like sparta :)

Any help is appreciated.

862. Looking for Intellevision II paddlles....

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-27 00:00:00 UTC
From: Adam Dare <Adam@msn.com>
Message-ID: <01bc0c15$7d7509c0$2814369d@hellspawn>
Source record: 76532

And I'm not sure where to look for those.

Does anybody have an Intellevision II in decent condition that they want to get rid of, or at least a couple of paddles? Or, does anyone know of a better place to go looking for them?

thanxx,

Adam

Microsoft's InternetNews *DOES* give you the size of a message before
you download it! (This message was 16 lines long!)

> A newsgroup called alt.binaries.atari DOES exist and is an appropriate
> place for such messages. I had no trouble getting AT&T Worldnet to carry

I hate the amount of SPAM that piles up in groups that are not used very
often
but are still usefull to have around... sigh

Every major emulator (Atari800, Rainbow, Pokey, XFormer and XL-it!)
emulate bankswitching.
It has another reason that SpartaDOS doesn't work. I've no idea
whats the reason because I never used SpartaDOS and I still haven't
figured out which version fails (one says it works and the other
one says it doesn't work....)

Bye,
Markus

From: William Fisher <blackat@direct.ca>
Message-ID: <01bc0c20$a4e09640$96f7aecc@blackat>
Source record: 76535

To All WebRing Members,

It would seem that www.webring.org is still down and is beset by problems. They are in the middle of moving the PHYSICAL server to another building due to some problems with it's current location. The last e-mail I got said that they should be back up and running sometime this week, this weekend at the latest.

Once they are online and running for sure I will then proceed to set-up the ring (and rings that were set-up within a certin time have to be re-initialized, that includes this one) and e-mail you all the grahphics and instructions for your pages.

Thanks for your patience! This WebRing will be great once it's actually up and running!

867. Mail-Return adress

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-27 00:00:00 UTC
From: Matthias Belitz <matz@kawo2.rwth-aachen.de>
Message-ID: <32EC8D30.4882@kawo2.rwth-aachen.de>
Source record: 76537

Hallo !

Iï¿½m looking at some strange development here for some weeks now.
More and more people have set a strange return adress as "mail@homeï¿½ ;
"read@my.sig" etc.
Is anybody here, who could explain this to me ?
Itï¿½s just a little boring, to get 50 % of all messages back with the
error code "host unknown".

Matt

This is exactly what i meant with linked file system for windows. At the
end of each sector will be a pointer to the next one. And MS sells it
as a advanced technology to avoid the old FAT...

I agree that it's inefficient for random access.

Well, I guess I HAVE to get my 2 cents worth in on this one.... If you
combine both the sector links, AND the FAT, you have fast random access.
AND File Integrity. The "New" MS technology is doing just that, and I
have to say it IS an improvement!

I'm not sure who exactly started this, but as anyone who has been
posting here for some time will know, E-Mail addresses are freely
available to anyone who reads a posted message. It would seem there
are auto-email grabbers which send SPAM or just JUNK email to anyone's
email address found. I myself have had my mailbox full of pure junk,
and this seems to be the only solution. So if the reply-to address
looks bogus, check the message for an attached signature something
like mine... it will contain the real email address somewhere.

I just checked out SpartaDOS 1.1, and it works ok on the old 800 if
you want that. Yeh, I know it's going backwards but anyway.
I don't think a cartridge of any type will allow XL/XE software to
run, since the 800 cannot allocate RAM under ROM, and also the memory
location $C000-$CFFF is totally unusable anyway. So a dual operating
system modification would be the best bet, although I think you would
be hard pressed to find one for the 800 nowadays.

Message-ID: <5cilqa$dgm@alexander.INS.CWRU.Edu>
Source record: 76545

(Jon says 'higher' write/format current is used on HD disks.)
From 'Upgrading and Repairing PCs' 4th ed. Scott Mueller. p 558.
"How do you format a 360k disk in a 1.2m drive? If you just execute the
FORMAT command without parameters, DOS attempts to format the disk to its
maximum capacity. Becase the 1.2m drive has no media-sensing cpabilimes that the disk
capability is equal to the maximum capability of the drive
and attempts to create a 1.2m format on the disk. The write-current
is increased also during a recording in this format,
which is incompatible with the 360k media. To format the
360k disk correctly, there-fore, look at the alternative command examples
in table 13.7.
Table
Note that DOS versions prior to 3.0 do not support 1.2m drives. Each
example command accomplishes the same function, which is to place on a 360k disk
a 40-track, 9-sector format using REDUCED WRITE-CURRENT MODE (caps mine).
" end quote.

876. Schreiersgruen Atari 8 Bit

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-27 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <5ciqdv$qst@widukind.fh-worms.de>
Source record: 76546

Hallo,

Hier nun eine fuer "Deutsche" lessbare Version ueber die Schreiersgruen Messe.

Die 2te Schreiersgruen Messe (Schreiersgreun liegt zwischen Hof,Zwickau & Chemnitz) findet diese Jahr am 15 Maerz statt. Sie ist eine mittlere "Hausmesse", bei der man Hard- und Software von Haendlern kauften, testen und spielen kann.

Auf dieser Messe werden auch ein paar der neuen Entwicklungen fuer den XL vorgestellt (AT-Bus Interface fuer XL`s) und anderes.

Die Neuigkeiten bei der Software beschraenken sich auf die wenigen "neuen" Polengames und andere.

Es sind aber nicht nur Haendler sondern auch Freaks &oder Regional Gruppen erwuenscht. Naeheres dazu am Ende des Textes.

Bisher haben folgende Personen ihr erscheinen angekuendigt:

Andreas Magenheimer (Besitzt mittlerweile fuer viele Spiele die Rechte) und vertritt "den immer noch nicht gesunden" Armin S. (Portronic/AMC). Also Uni Pad, Power Pad, Soundgeaete XL/XE , Herbert & Co. RaM 3

Raimund Altmayer (Besitzt das Vertiebsrecht fuer Turbo Basic XL) entwickelt viel Anwendungen & anderes in Turbo Basic, stellt das Festplatten Interface vor. Der Mann in Sachen Turbo Basic, ST Xformer und RaM-ABBUC Buecher Bibliothek.RaM 1

Torsten Schall (Sorgt fuer die Unterhaltung durch Lynx & Jag) bastelt an Hardware, Verbindung der RaM zum Internet her. RaM 4

Markus Roemer (Polensoft/Top Mag) wird uns wieder mit vielen Polenspielen ueberraschen, die auch Probe gespielt werden koennen/Kauf ist erwuenscht und gewollt. Informiert ueber das Top Mag.

KE Soft (Prototypen, alte/seltene XL Spiele und Hardware) oeffnet wieder seine Tueren und bringt altes/neues fuer XL-User mit, hatte bis vor kurzem Tower Toppler im Sortiment (Tower Toppler = Nebulos = Super = in den Zwischensequenzen 3 WEGE Scrolling). Eine Fundgrube fuer alle Freaks.

Ort & Zeit

Helmut Weidner richtet mit Markus Roemer die Messe aus. Der Ort ist der gleiche wie letztes Jahr die Wirtschaft in Schreiersgruen.

Die Besucher koennen die Messe ab 10 Uhr stuermen. Die Messe endet zwischen 16-18 Uhr, je nach Anzahl der Besucher. Der Eintritt betraegt wie im letzten Jahr die symbolische Mark. Die Wirtschaft in der die Messe ist, hat ein reichhaltiges Angebot und wurde letztes Jahr rege in Anspruch genommen.

Haendler sollten etwas verlosen bzw. in ihrem Kundenkreis fuer die Messe Werbung machen. Der Aufbau beginnt um 8Uhr 30 und endet wenn der Haendler fertig ist. Die Plaetze auf der Messe sollten in den naechsten Wochen bestellt werden, damit wir wissen in welchem Saal die Messe gehalten wird (ca. 60qm oder ca. 85qm).

Am Ende der Veranstaltung findet ein gemuetliche Beisammensein in der Wirtschaft unter der Messe statt.

Also, wer einen Stand haben moechte oder den Weg zur Messe wissen moechte und/oder andere Info`s braucht sollte sich an folgende Personen "ab 17Uhr" wenden.

Helmut Weidner
Hauptstrasse 45
08485 Lengenfeld

Tel: 037606 2688

Markus Roemer
Schiefersteinstr. 10
55606 Kellenbach

Tel: 06765 96 00 46
FaX: 06765 96 00 47

bzw 0049 37606 ...
0049 -6765 ...

So jetzt noch eine Kurze Beschreibung des Weges ab Bayreuth:

Von Bayreuth die A9 in Richtung Hof
auf AB DR Bay. Vogtland in Richtung Zwickau (A 72)
A 72 bis Abfahrt Trenen

Dort auf der Hauptstrasse bleiben und einmal links, rechts abbiegend durch den Ort fahren. Nach dem Ortsausgang sind es ca. 1 Km bis Schreiergruen. Dort sucht man die Gaststaette Schreiersgruen. Ist man bei Trenen abgefahren, sollte es keine Probleme mehr geben, da der Ort (Schreiersgruen) sehr klein ist.

Zur letzten Messe:

Der Anfang war wie vorher beschrieben, wir wurden allerdings von den Besuchern ueberrannt. Die Besucher bestuermten uns bis 3 Uhr, danach wurde es ruhiger. Die symbolischen Markstuecke flossen in grosser Zahl, fast haette sich Helmut einen Bruch gehoben. Die Zaehlung ergab 70DM, wobei ein Teil nichts gezahlt hat und der andere mehr als eine Mark. Leider war zur Messe kein Demo fertig. Es gibt sogar 2 Demos zur Messe, die es beim ABBUC oder den diversen Disk Mags gibt.

Die Atmosphaere war super und die einzelnen Staende stark umlagert. Die Haendler waren mit der Messe sehr zufrieden und deshalb gibt es sie wieder.

Also ich habe meinen Teil zum gelingen der Messe geleistet, jetzt liegt es an "Euch", den Usern ob es von dieser Messe im naechsten Jahr ein 3ten Teil gibt.

Helmut, Markus und ich freuen uns ueber zahlreiches erscheinen.

Wer ZEIT und LUST hat, kann ja ein Demo fuer die Messe erstellen, sollten genuegend Demos erscheinen, gibt es den Print Shop, AR & weiter Software fuer die 3 besten Demos.

Also kommen, sehen und Spass haben...

Zee U ad chraersgruen.

Sorry, but I have to say that I am laughing loudly now. It's pretty absurd to think that something like the Atari DOS will be used in a modern OS. Atari DOS is "linked" because each file is a linked list: the last three bytes of a sector are a pointer to the next sector in a file. This is a horribly inefficient method of keeping track of which sectors are in a file. For example, you cannot do random accesses. If you want to open a file and move to the end to add some more data, you have to read the whole file.

It's also kind of annoying that it has to read a whole file in order to delete it.

I think the combination of the two schemes is best; that way, you get good random access with redundancy. (Having the links is good if the map gets trashed; that way, you can usually salvage the files.) -Stan

878. ICD Sale

Newsgroup: comp.sys.atari.8bit

I recently acquired a small shipment of ICD products which are for sale:

ICD PR: CONNECTION 8bit communication boxes:

2 high speed serial ports, 1 centronics parallel printer port.
Unit requires no external power (great for mounting INSIDE of your
Atari XL/XE computer, even an 800 with a little work)

Includes a brand new still in the package ICD 850/PR: serial modem
cable and Atari SIO cable.

$12 each plus shipping. (only 15 available)

$10 each plus shipping WITHOUT plastic case (only 7 available)

ICD Atari Serial 850/PR: connection modem cables
Brand New, still in the packaging.

$3.00 each plus shipping (only 12 available)

James, I received your 8 bit CD but haven't gotten back to you with my opinion, because at this point I have been overwhelmed with the number of files on it. Every time I think I'm at the end of a sub-directory, I find another sub-diretory down the tree. It was well worth the wait.

Hallo !

Ii¿½ve now uploaded the complete BW-DOS to my homepage.
The ZIP-File includes two ATR-Files. Side a is BW-DOS 1.10 with the
updates 1 & 2 in two subdirectories.
Side b includes the complete manual.

Would be very nice, if an American could upload this to UMich, because I
got no access to it.

Thanx, Matt

> been the next logical step.

yeah. Subdirectory and file system converting are great attempts. It will
need turbo i/o and shoud take advantage of extended ram.

there are several OS replacments availble. Some are software only! It's
really easy. Just load trans.com (or something else), reboot by a key and
play! -BUT- you have to get a copy on disk. AFAIK it isn't possible to
plug-in an cartridge while power is on.

But there is another wish I have: if possible, do this using CIO calls
to the standard device handlers, so that this program will also work on
XEP 80 cards (or something other that might be developed).

>make bad things happen. That is, affect the output.

Opening up a paddle reveals that indeed it contains a 1 MegaOhm
variable resistor. One end wired to +5 volt, and the 'wiper' wired to
the paddle pin connected to the Pokey chip. There is no wire
connected to ground, (well, there is for the trigger) since it is
actually not a voltage divider. Pokey simply measures how long it
takes for a capacitor to become charged. The higher the resistance
value, the longer it takes. The resistance of the human body varies,
but it would only be a factor if you would actually touch the wires.
The input impedance is such that a capacitive effect by being near the
wires does not affect it. Makes sense if you sit in front of the
computer all the time I suppose.

>Further, people have indidcatd that the output range was from 0-255. Again,
>working purely from memory, a lower bound of 10 sticks in memory. An upper
>bound does too, but I can't pin it to a number. There are several reasons for
>the limits. First, is that the readings become unreliable towards the extremes
>of travel on a pot, and second, moving the cursor/sprite/whatever, too far
>results in them being pushed off screen, resulting in a Cursor Out Of Range,
>error.

By actually trying one out, the value ranges from 1 to 228. This is
close to what mapping the Atari says. Since Pokey counts the number
of scan lines it takes for the capacitor to get charged, if there are
no more than 228 scan lines, the value could never become 255 within
one video frame. Actually, by the time it hits 228, Pokey aborts
measuring and starts dumping the charge in order to restart on the
next VBI. If your paddle will not physically move enough you might
get a low value of more than 1, so 10 would be possible. Programmers
should remember this when designing applications.
Actually, all this stuff is described in the hardware manual. It
contains lots of good stuff. The fact that the cursor would get out

of range is a software problem that the programmer has to deal with once she/he understands the hardware.

Just wanted to add this to the topic in order to clarify things.

889. Emulators for PC. Help needed.

Hi you Atari fans,

I have to admit I have left my 800XL domant for 12 years. Finally gave it a good bashing. My TV screen looks poor and I sold my Phillips Monitor. So I tried Xformer (2.5 & 3.6) and Pokey.

Can you assist me by helping me with the following:

1. Which emulator is the best for working correctly?
I cannot get the keys to work in Rescue on Fractalus for landing etc.

2. I need an urgent fix on Defender. Have got Defender.exe file from Jellystone. How do I get it to run?

3. Carrier Force (SSI), the best carrier game ever made. How can I transfer files from 1050 disc drive to PC or has any one got ATR, XFD file?

Any information, pointers to help or otherwise, would be most gratefully received.

Russ.

Very Old Atari User.
Very new Emulator User.

OR if you format a disk with "util" and not on the 1050.
I've tested 'Util' on more than 15 PC's so far. Most of
them had 1.2 MB floppies installed. The results of my tests
are somehow strange: apparently the reliability of 'util'
depends not only on the actual drive or disk, but
also on the setup of the computer. I've been using
publicly accessible PC's for the test. It happened that
'util' worked perfectly on a computer one day, but it failed
entirely the other day. Something must have changed in the setup,
I simply can't think of any better explanation.
For me, at least, there's no way to reliably find out
which computer (of the 15) is best suited for
'util' on a particular day.

What I did find out on the subject is that 'util' crashes
any computer infected by the "FORM" virus. This virus
surely hookes on similar interrupts/BIOS-calls as 'util'
does.

>HD drive work. Int 13, ah 17 and 18 will set the pc floppy

Omnimon was/is a different OS, I think for Atari 400/800 only, maybe XL/XE
I don't know. It was supposed to have extra features, like an M/L monitor
and give you more control of the system. I think there was even an 80col
version somewhere...

As a few messages noted, SpartaDOS version 1.0 & 1.1 will run on a stock 800 or a memory expanded 400! However, a better choice for the 800 is using a SpartaDOS X Cart. The X-Cart works well on the 800 and also allows you to use a R-time-8 cart in the right cartriage port for time/date stamping. The later versions like 4.20 or 4.21 were rather bug free. They can be used for accessing disks in the both SpartaDOS and Atari type single/enhanced or true double density.

SpartaDOS X (The cartridge version 4.2x) allows you to tell it what type
of extended RAM to use... if you have an upgraded computer, you can tell
it to use one of the extended banks of memory, the traditional memory
under the OS, or none at all. NONE being the one that lets it operate
on the 400/800, but it does not leave as much memory free. When sparta
X uses a bank of memory for highmem, it leaves the more memory free than
almost every other dos out there!

The coolest way to go is to find a SpartaDOS X (4.2x) cartridge, and
then your 800 will boot up really fast, turbo disk access, etc... if
you can find one... otherwise, you may be able to find a hacked version
of 3.2, or 3.3.

some atari disk drives, like toms720 or xf551 could use both side of disk at
the same time - they had two heads. same as disk drives in pc's or st's.

in ataris, toms 720 could format disk for 720kb (used the same dd floppies as
atari 1050 and others).

I used to run a BBS in Salt Lake City about 10 years ago--called the Great Underground Empire. We were using an 800xl with ICD's Basic XL and modified Carina 2.0 BBS software, and a 20 meg Supra hard drive.

Well, I want to set it up again.

I would like to buy an ICD MIO (any version) and ICD's SpartaDos picky back cartridge. If anyone will sell or has info about where I can purchases these classic ICD BBS tools, please e-mail me at James.Anderson@Juno.com.

Thanks.

905. BobKlass's Repair Shop

Bob, I've got a question for you!

Arn't you the former Sysop of Utah's longest running ATari 8-bit BBS--the Repair Shop? It's good to "read" a familiar TYPE face.

Is the Repair Shop still running?

Tell me about the BBS Express Pro version 5 that you're selling.

Also--didn't you buy Eric's MIO? I'm still looking for one and ICD's spartaDos piggy-back cart. Do you have anything to spare?

James Anderson

It's their way of telling the Email "Spammers" where they can stick their
unsolicited sales pitches. When you see something like that, either reply
to the group, or if you have to Email reply the author, their proper Email
address will be near the bottom of the message, usually with one or more
"*" type characters imbedded which you are instructed to edit out.
Granted, it makes it a little tougher to Email reply to them, but it's for
a good cause..... dB^)

Source record: 76427

(Followup to my own msg. about 'util' and oersteds.)
Well, I still say it'll take me months, because this is dangerous
stuff (my sector read/write on A8 and PC, stuff). BUT, I want
to say, I worked on it all day. And had some success. For the
first time, I got my pc prog. to write SpartaDOS to a disk and
it booted on A8. I mean I've done it before, but only with 360k
drive. This was done using entirely 1.2meg drive and A8.
Before someone wants it. I've done stuff like mess up my
source 1.44 meg, I mean it. What disk do you have in drive A:
when your 'developing'? Your source code disk.
What happens if you mess up and write sectors to that disk,
my 5.25" is on B: drive. I did it again, got excited and started
writing to A: drive with source code disk in it. It returned
an error and things seem ok, but that's what I'm doing.
I blithely go thru selecting the pc drive right thru C: drive,
which is my hard drive, I don't think it will write sectors
to it, but who wants to find out?
So, some of the theory worked today. And, if I ever get this
stuff I use when I need it to shape where it is half safe,
sure, I'd u/l it someplace.

>this:- the 1.2mb drive spins at 300rpm, while the 1050 drive spins at
>288rpm. If you use the XF551 disk drive, that does spin at 300rpm, so

I remember telling something like this to someone...

Now, I know that RPM isn't really the only parameter you have to look at here.
RPM of the disk drive has always to be considered together of the clock
rate of the drive's controller. More precisely: the data rate.

I'll try to explain. The controller chip in the disk drive usually
uses a fixed clock rate to pace the bits that get written on a disk.
If you increase the RPM of the drive, while the clock rate of the controller
chip still remains the same, you won't be able to fit as many bits on
a track as before. Similarly, if you decrese the rotational speed of the
drive while maintaining the clock rate wou'll be able to fit more data on
a track passing by the R/W head.

When Atari engineers developped the XF551 disk drive, they had a difficult
task to complete. The new drive mechanisms didn't rotate at 288rpm anymore,
but at 300rpm. Despite this the developpers had to make sure old software
could still be read on the new drive. As they couldn't (or didn't want to)
lower the rotational speed of the mechanism, they incresed that pace at
which bits get written to the disk.

They used a 8.3333333333 MHz clock compared to 8 MHz in a 1050
The amount of bits that can be written to the disk during one round still
remains the same in both drives:

```
drive | clock rate | RPM | rounds/s | max possible bits/round |
=================================================================
XF551 | 8.33333 MHz| 300 | 5.00 | 1666667 |
-----------------------------------------------------------------
1050 | 8.00000 MHz| 288 | 4.80 | 1666667 |
```

So, you see that theoretically the reliability of 'util' shouldn't
differ between the XF551 and the 1050. If you're getting better results
with the XF551 then surely not because of the higher RPM of it.
There must be some other reason.

>works ok using a disk formatted on one of my 1050 drives, but I think
>the head alignment may be out on the 1050, cause I have lots of
>trouble reading those disks on another 1050.

I assume that head misalignement can do a lot of harm to reliable
data transfers.

>Yeh, I know UTIL is only for DOS based disks, which is a real pity.
>It'd be great if someone could write a new program to read an Atari
>disk sector by sector on the PC's drive. I'd have a go myself, but my

What do you mean exactly by "sector by sector"? How should a disk
image be stored then? As DCM-file?

>knowledge of the PC is very limited when it comes to writing programs.
>I have seen a couple of programs that claim to be able to read a
>single density disk, but I can't seem to get them to work. (They are
>not actually written to copy Atari disks, they simply read any disk
>sector by sector). One was called "ANADISK", and the other "DEANA".

I've been tinkering in this field for some years now. Without great
success, though. My routines use BIOS calls in order to read "enhanced
density" disks. The problem is that I can't say when a read on a sector
is successful and when it fails. While BIOS dosn't report any errors, some
sectors are still corrupt. Also, on consecutive reads sometimes a sector is
OK, sometimes it isn't.

During the following few years (well, I don't get very often into programming
on this) I'll try to figure out how to read a disk without BIOS-calls.
There must be some way to read data reliably by programming the disk
controller directly. It seems pretty tricky, though, as you also have to
deal with some nasty little things like the DMA controller and alike.

best wishes,

-Marek

You have to realize that the 'FREE' version is NOT the same as the
PAY version. I have 3.0, which I paid for and it seems to work as
advertized. I've d/l'd some favorite games from Yogi's site and almost

all of them work fine with my Aptiva Pentium 133 w/Win95. This version isn't even designed for Win95. Sound works, the joystick works and it IS exceptionally fast in turbo mode. I also have 24Mb of RAM on this beast, so that probably makes a huge difference in processing time. However, I have been waiting since October for the 4.0/Win95 version to come. Darek has never been known for speed, but what I paid for does what he said it should do. I just wish I could get SpartaDOS and BASIC XL runtime to work on it.

I agree, 80 col and more than 2 colors is too difficult for tat
least the first shot. Add stuff like that much later. Important things
like copy, move, delete, undelete, multi-directory scanning,
source/dest lists, access to arc/unarc, make directory (MD), remove
directory (RD) and deltree (delete entire directory w/files and
subdirectories would be the things I'd use most. The split screen could
be over/under format (Tile horizontal). I use Win file manager in this
layout and it works fine. Oh one other thing to possibly have is a file
search on the currently selected drive. It doesn't have to search all
drives like WHEREIS.COM does, but should search the entire current
drive or all directories from the currently selected directory on down.
It should also be able to use wild card searches. Thanx for listening

building
> car parks? - Bricks and Mortar; The Jam
>

Actually, it is the completion of a simple RC circuit. The
resistance valur set by the wiper determines the capacitor charge time.
There is a predefined amount of time (VBI) the is used to get the
value. The time is s
tarted at the start of the VBI (Vertical Blank Interrupt) and the
capacitor is discharged. The capacitor charges during the VBI. At the

end of the VBI the POT register is read and the amount of charge on the cap is read a
s a numeric value from 0 (not charged) to 227 (full charge). How fast the cap charges is determined by the resistance. Less resistance, faster charge, more resistance, longer charge.
I think you're right on the 10K, but I don't have my books with me at the moment, to look it up.

Chris,
The SpartaDOS X cart should work on the 800. I'll try it on my 400
and get back to you. Simce it is mostly in the Cart, it should work. I
sorta remember, back when it first came out, that it could run on the
800 with at least 48K.
I love SDX and wish it could be made readily available and upgraded
again. I'm sure you can come across the 4.x carts somewhere. Try B&C
Computervisions

>Tracy
>
>Please respond to 104317.440@compuserve.com

an *.ATR file is what is called a "disk image". It contains all the
information that you would get as if you were using a real disk in a
disk drive. The emulator(s) need the filenames of these ATR files
placed on the command line to use them as a virtual disk drive (namely
D1:) for example:

XF25 MULE.ATR

and then Xformer will start and "boot" the image MULE.ATR as the first
disk drive. You can also add more image files (up to 8) on the command
line. *.EXE , *.COM, (and probably *.OBJ) files need to be placed into
an ATR image file before you can use them. You can place them on the
command line just like ATR files, but you will have to have a DOS ATR
file first, so you can then copy the EXE etc files into D1: . The way
it works: for example:

XF25 MYDOS.ATR FILE1.EXE FILE2.EXE

When booted, you will have 3 drives according to MYDOS. you can then
use the DOS Command [C]opy D2:FILE1.EXE,D1:FILE1.EXE
and [C]opy D3:FILE2.EXE,D1:FILE2.EXE

which will copy the 2 files into D1:, and after copying, the drives
D2: and D3: will no longer be there as the files have been read to the
end and Xformer takes them off.

Hope this has helped.

Well, it's really trial and error to find the best emulator. Mainly
depends on your current computer configuration and what "platform" you
are using (DOS or WIN 95 or whatever). Anyways, about DEFENDER, you'll
have to copy the EXE file into an ATR image file that has either DOS
or a "boot sector file loader" in it. I've found that using PC
Xformer, the first time you load the game nothing happens. But you can
then press F10 to "reset", and it runs just fine then.
As for transferring files from A8 to PC, you've probably seen the
postings about it in this newsgroup? Anyway, you can check my Home
Page for info, and links to other great pages too.

Well I cannot agree with that at all ! I have got the PAY
version (3.5 or whatever the last one was) and it is dreadful.
It does not run very many games and even when it does
they are usually very glitchy. The sound is also very poor.

It is fast but I'd rather it worked.

Xlit is much better, as is the Rainbow demo and I have just
sent for the reg'd version of Rainbow, so I will give my
impressions later.

Rob.

Unfortunately we can't hear the sound in the demo (disk noises only).
Not too smart taking the sound out of the demo since this is probably
the most critical feature when comparing it against the competition
(ie. Xformer, xl-it, pokey, etc.).

posted this once before, give it another try.

i have a complete 800xl system:

800xl
1050 disk (unmodified)
1025 printer (dot matrix)

would anybody be interested in trading cartridges, software, books
for the system?

be reasonably fair

cheers,
robert

Yes, it seems like a pretty cool game. I got it last night from Yogi's site, "jellystone" if you use the INFOSEEK search engine.

The game with the little "Mario" looking guy and the falling
"elevators"? You can get it for an emulator at Yogi's site...

http://www.blast.net/scharles/

Go to the Atari archive or mirror site...

Yes I know this as I have had an X cartridge since about '89 and love(ed) it. Only problem is that it can't be used with an Atari emulator on the PC since it is a cartridge. :(

Anyone have any skill in converting Supercarts like BASIC XL/XE, Action!, SpartaDOS_X, or the like into some kind of ROM image files that can be used by XL-it or some other emulator? Even if you just gave me a program that can do it, or some kind of way to make compatible ROM files... that would be the BEST thing going to have SpartaX on the emulators! I own X, BASIC XL, Action! & Mac65 carts. Would love to use them on an emulator. Somewhere I have a 'pirate' copy of Action! that worked from disk alone. Burried in my Atari stuff I hope. I fiddled with it a little and it did indeed work at least to some degree but I didn't examine it too carefully because I had the real thing.

Cheers,

Jon

I heard he used to work for Radio Shack and programmed "supernova"
(asteroids for trash80 model i) on their time, offered it to them for
$$$, and they fired him for programming on company time (its in Radio
Shacks contract you sign when you get hired)
(guess who works there) :)

At any rate there is a real good trash80 emulator (with sound)
available through:
http://members.aol.com/trsf80/index.html

I really like playing "Galaxy Invasion plus" and "sea dragon"
Sea dragon is the BEST on the trs80, it blows the atari version away
(in terms of playability....so what if its not "pretty")

Hello,

I was wondering, does anyone have an Atari 1010 program recorder in good condition that they would be willing to sell? I have one that works great but the Play and Rec. buttons broke so I have to manually press the metal that engages the tape with my fingers.

Anyway, if anyone has one please E-mail me at:

AntBBaker@AOL.com

I suppose you could go play in comp.sys.ibm or comp.sys.mac for a while
couldn't you?

And before you tell me to go get a *real* machine I happen to own a
P-120mHz and I do
use Win95. I was also a programmer on both the AtariST and the Atari-8bit
and let me
tell you what a *NIGHTMARE* it is programming for Win95. GEM was baby-talk
compared to
the stupid API calls Win95 has and all the patches you need and the stupid
format of the
calls (half the system calls are derived from Pascal, the original language
Windows was
programmed in).

I thought the post was quite interesting since I did not know that Atari
Corp had
'officially' left us. But the important thing is that there are still
people who
enjoy using the machines and if it's good enough for them then why should
they go out
and spend 1000's of $$$ on an IBM or Mac?

Like I said before: if you've gotten tired of Atari's then please take
yourself off to
another one of the 10,000+ newsgroups!

Actually they revised it... anything you program *AT ALL* is the property
of RadioShack. It doesn't matter if you do it on their time or yours.
Guess who added a clause to their contract when they got hired last xmas?
=)

Hello, where have you been? Atari Corp has officially left us, abandoned the platform, etc. etc.

As for the nightmare of windoze programming, perhaps you need a few more courses :-). The nightmares don't seem to have stemmed the tide of great Win 95 software, like gemulator 96 for instance.

As for everything else you said, I pretty much agree. Being a user of both platforms, I use Win 95 for the great apps available, superior sound, speed and graphics.

But I don't love it the way I loved my falcon and my megaste. Those were great home computers.

OTOH, I also agree with Shellac that the management and marketing of Atari has been a source of frustration for users for years.

961. FS/T: Atari 8-bit computer items [01/29/97]

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-29 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <5cn4n9$bqm@sjx-ixn7.ix.netcom.com>
Source record: 76384

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 01/23/97

NOTE: There are currently 1375 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.00 Atariwriter
$ 5.00 Basic -- for use with the Atari 400 and 800
$10.00 Delta Drawing (Spinnaker)
$ 4.00 Missile Command
$ 4.00 Space Invaders
$ 5.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers -- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers (14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3 (100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog (32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$39.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 5.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$14.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$19.00

*****

To reserve any item(s) listed here, please contact me (please read
the SALES CONDITIONS section first). Thank you!

> that TOS was some big model of perfection...Far from it.

No... but it's nicer than Windoze any day of the week. What you don't
seem to understand is that all the extra functionality that you see in
Windows is written into each an every application. For example, OLE.
This is not some complex OS feature, but a standard communications
interface implemented in many major programs.

Also, Windows is a *PIG* to program, mostly due to the fact that,
unlike TOS (which seems to be unique in this respect), there's no
systematic function naming (e.g. in GEMDOS, all file functions start
with an "F", and all memory functions with an "M"). Under Windows,
it's pot luck whether you even find the damn function you were looking
for.

> together, which is one big cop-out.

You're right, the Jaguar was hastily produced, and some of the games were rather... well, SNES-like... However, it *was* a 64-bit machine. The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors, three of which are more or less completely dedicated to graphics, but could probably be used for processing as well, and one 32-bit RISC DSP chip to handle the sound subsystem.

The 68000, contrary to popular belief (proliferated by the rather anti-Atari console press) is only actually used to process I/O, such as the joypad, and for "housekeeping tasks" - I assume this includes little things such as clocks.

No - this is unfair. Bill Gates could probably have managed Atari better, but Atari was failing anyway; the major problem that they had was that the press were largely against them, resulting in the entirely juvenile behaviour of a large portion of their potential market (the "Oh - it's an Atari - well, it must be cr*p then" syndrome). Monkies, however, could not have managed it better. The Tramiels have actually done quite a good job; although you probably don't realise it, the Atari 2600 games system was the most popular console ever.

I have to agree about what Atari became, especially as an 8-bitter.
(Of course I use more modern machines, that's a totally different
issue) "Classic" home computers are a fun and mostly inexpensive hobby
for a lot of people. Why should you care?

And the real reason I responded to this was the chance to quote
something I found quoted on an Apple IIGS web page while digging for

65816 info:

>Screw reality, dude! I'm sorry to tell you this, but the GS world is no
>longer based on reality... it's pure fantasy come to life. We all dream
>our dreams, and hack the machine to hell until it does what we want. If
>we all stuck with reality, we would have no GS. Why would I want to play
>a DoomGS under an emulator on a Pentium when I could just play Doom
>normally? Come on man. Get with the fantasy, and make your machine
>chase after those P90's screaming bloody murder. Mine does. :)

You both got it wrong.

The Jag has a MC68000 and two identical 32-bit RISC processors (one of
which was intended to handle sound processing). It also has a couple
coprocessors to accelerate things like blitting, sprites, etc. The 64-bit
element in the whole affair was the memory bus connecting the various
processing elements and the 2MB DRAM memory together.

Does it really matter that none of the processors in the machine cannot
handle 64-bit instructions? No. The only reason the N64 to has a 64-bit
CPU is that SGI designed the thing, and they're partial to the 64-bit MIPS
architecture. Not surprising, given that SGI owns MIPS.

There were clear benefits for game consoles to move from 8 to 16 to 32 bit
CPUs. These jumps allowed larger address spaces and quicker computation
(because 16 and 32 bit calculations are very useful). But 32-bit address
spaces are overkill for games in the immediate future, and 32-bit numbers
have a large enough range that you don't really need more except in very
rare cases.

Just so some of you don't go crazy trying to make some games work on an XL, I should mention that some games just WON'T run on an XL, even in some disk file formats. I have a file version of Berzerk that refuses, even with FIXXL or the Atari Translator disk. So if you run into one of these, either face the challenge of disassembly and patching, or try finding another file version. Just don't hurt anybody. :)

I had an Omnimon once. If I recall correctly, it was a chip mounted on a small board that fit in one of the chip sockets of the OS board, with the leftover chip (probably a rom chip?) fitting in a socket on the small "daughter" board. I think it might have been an OS enhancement that made use of the 4K bytes usually unused by the 800. It included a small machine language monitor/debugger that allowed you to take over the machine at just about any time, including the middle of games. Anyone else remember better? So many years, so few brain cells left...

Funny you should mention Bill Gates and then talk about "take the money and
run" management.

Do you know how much it costs to report a bug (yes, I said "report") to
MicroSoft? Minimum, $35 - YOU have to pay THEM to tell them they have a bug
in their OS.

"Now go away, or I shall taunt you a second time."

I've seen this copyright issue come up time after time about old 8bit software. There is one fatal flaw in the reasoning of every pirate (lets face it they are PIRATES!) and that is that there are still some few vendors such as B&C (good service), or toad (bad service) among others. These places still carry 8bit software and hardware. Everytime somebody rips off one or more of thes programs because they can't run down to the computer store down the street is still taking a sale away from one of the few remaining dealers in existance.

B&C for instance has be seeing reduced sales for years now (no surprise there) and late last year came far to close to closing their doors permanently. If they see the blatant piracy going on here it's likely they'll make that decision and go in search of greener pastures.

the 800 very much DOES have a monitor port! it's on the side of the
machine where the sio, power connectors are, it's a 5 pin din connector
just like the XL's and XE's.

I honestly think it would not matter if there were an area set up for this as they wouldn't use it. Return Mail is avaiable and it is not used. There is alwayse the option of going to the city and confronting the person in person rarely used.

I have in the past month heckeled a couple users on here because I knew they could handle it and the posts were 99% in jest and returned mail reflected that intellengence.

I since have entered into an agreement with a programer that I would not be out sopoken on anything and refrain my post to answering hardware help questions. Fair for the programer as he wouldn't say Crap if he had a mouthfull..which he doesn't very respectable...and I have admired his restraint for a few years. I have seen a couple posts that it was very hard not to respond to in a negative way...but will address them in a very different way for myself personaly..instead of handling it with 5 gallons of gas and a few motorcycle riders will attempt to elighten a few who did not know.

Circular Logic @Logic, was not a company, nor was it registered to the State as legaly as an anominious ...like so and so dba/@Logic.. The programer of this unit attempted to restrict BBS Express! Professional to version 2.1a. Not acceptable, they wrote a command and released it that was not in their area of Copyrights to do, they also programed games that let the programer into a back door on Pro., Once pissed off the Programer for Pro wrote Fixelete.CMD which, closed the back door, let their version of the game run on any version of PRO! They pissed off the wrong persons, and through their own actions brought their demise not any of mine or the programer I had at the time. You can not overextend your programing efforts and attempt to restrict any owner of a specific copyright and not feel the ramifications of your actions.

I prior to this event attempted to talk to the individual involved and was more or less told to go to hell..So now all know the story behind the story.

Sorry for the post...did not get out of line...posted the facts, no derogitory remarks ect...(we both know one could expand on this!!)

I will obide in the future by my programers request and not post replys to derogatory statments, other than e-mail or personal visits.

thank you for you time..

bob

989. Monitor Cable for 1902a

Newsgroup: comp.sys.atari.8bit

From: Bill Bragg <bbragg@iag.net>
Message-ID: <32F07BC9.4B6B@iag.net>
Source record: 76219

I've aquired a CBM 1902a monitor and it came with a cable for a CBM 128 machine. It's an 8 pin DIN but I though the CBM machines had a pinout the same as the Atari 8's. Can I just open to shell and remove the offending 3 pins without losing functionality? --Bill B.

> offending 3 pins without losing functionality? --Bill B.Looking at my old 128 manual says, itï¿½s not just the same:

```
/|_|\
/8 7\
/ 6 \
(3 1)
\ 5 4 /
\__2__/
```

Sorry, design is not the best:
1 Luminance
2 GND
3 Audio Out
4 Video Out
5 Audio In
6 Crominanz
7 n.c.
8 n.c.

In my cable Pins 1; 3; and 6 are used.

Iï¿½d advise you to go to an HiFi-Store and buy a little adaptor-cable chinch to 5-pol. DIN.

Matt

I'm not impressed by the Tramiels' handling of Atari. And the
success of the 2600 was there before the Tramiels' came along.
The persistence of the 2600 is more due to its uniqueness, it
being one of the very first game consoles, and not to the
Tramiels per se.
Also the success of the Atari 2600 in the begininng, when it
was just plain ol' Atari VCS was the very reason why the Atari
Home Computers suffered from the image of a "games machine".
It didn't help when Atari didn't know how to market their
new technology, either, or treat their employees well. They
lost good programmers that way.

- Joel

Different versions of SpartaDos use different amount of memory (drop to basic and do a ? fre(0) to see what I mean. Some versions give you as much as 36K.. some as little as 31K. I think the new versions also have more commands similar to MS DOS..

It's been a while, but I use to use SpartaDos 2.3 because it gave the most ram and it was the most compatible with older stuff. Sparta 3.2 or SDX are more powerful but you lose some compatibility..

I subscribe to an online newsletter called IUMA (Internet Underground Archive News). This month's issue featured some tongue-in-cheek predictions for 1997 that the newsletter said it got from Dionne Warwick. The first item on the list caught my eye:

- Atari 2600 comes out with Netscape Communicator 5.0 cartridge.

Just thought it was funny enough to pass on!

1001. Cart. wanted BasicXL

Basic XL is a cartridge-based version of BASIC from OSS, that was designed to go with DOS XL in the same way that its predecessor Basic A+ was designed to go with OS/A+.

OS/A+ and DOS XL were both Atari DOS compatible command-line based environments offering a very similar look and feel to Sparta DOS and hence both Basic XL and Basic A+ will work quite hapilly with any Atari DOS compatible. Being cartridge-based, DOS XL will also work with no DOS at all.

Basic XL and Basic A+ were both Atari Basic compatible, but offered more functionality and better speed. Basic XE was an extension to Basic XL which allowed the programmer to access the extra memory, although I *think* DOS XE had a menu-based interface much like Atari DOS 2.0S/2.5/3 et al.

Turbo Basic XL was a different product entirely, a public-domain, XL-only disk-based version of BASIC that, like Basic A+/XL/XE was Atari Basic compatible but offered much, much better speed, lots of extra commands, and even a compiler.

Just my two cents worth

Graham.

>matt raupp

It all depends on what exactly you are trying to load, and what type of DOS version was used on the disk images. From memory, the "menu.atr" actually loads files that are stored on a MyDOS formatted disk which is placed as D2:. (Yogi???) If you simply want to load EXE files, you could place these files into a single density disk image, and use a "boot sector loader" like LeMENU to run them. There are a couple of other "boot sector loaders" that I know of, but I haven't yet tested them under any of the EMU's. Looks like I'll have to get to work testing out various programs on the EMU's, there seems to be more and more calls for help with them.

Auxilio.

Mi nombre es Rodolfo Carlos y soy usuari de Atari desde 1988,
actualmente cuento con una Atari 65XE que quisiera utilizarla como medio
de control de acciones, como el control de ls seguridad de la casa,
apertura de las ventanas y lo opuesto de acuerdo a la temperatura
interna.
No usare el Z80, o los armalos tu mismo, ya que con la placa de la
Atari, tengo coneccion a video y audio, cosa que necesita el operador.

ï¿½ Que manuales necesito ?

R.C. Burlando Makthon.

There are two sides of this story.
First I think that noboby could believe, that he will get cash enough by selling XL-stuff as full
time job.
Second I also want to see all the stuff, Iï¿½ve only heard of all the years. And lotï¿½s of stuff isnï¿½t
availiable any longer.
By the way, every year at the ABBUC fair in Germany I buy lots of Original stuff just to collect
it and to say "I have it". And I believe that most people do so.
So let them copy the things, test it and then buy the best.

Matt
P.S. Hope somebody can understand me - my English is to bad ...

1008. Question on GIF's and Atari

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-30 00:00:00 UTC
From: Anthony Bufort <ajbufort@mail.sas.upenn.edu>
Message-ID: <32F10D31.78E5@mail.sas.upenn.edu>
Source record: 76238

Hi again all...

On my workstation at work, I'm running a PowerMAC that has Adobe Photoshop. I'd like to be able to create images in Photoshop and view the images with my Atari 800. I realize all the constraints, but I was thinking... what if I set the size in pixels to be that of a given Atari graphics mode, say mode 7, and then used only four colors, since that's all 7 was built to use. Could I then save the image in some format and then quickly and painlessly view it via some Atari utility that's out there?

If there isn't such a utility (and I wouldn't be surprised if there weren't), can anyone give me some pointer on how to go about writing it? I've been already looking at the GIF spec papers on the Web and going over what such a program would look like in my mind.

Any advice would be greatly appreciated...

-Tony

Recently I d/led a program called SPEAKEZ from an Atari site and ran it in BASIC. The program looked really cool at first, as if I could teach it how to speak all sort of words and stuff... but it doesn't seem to work. I've patiently played around with all of the commands, and can't get anything out of it. Can anyone tell me if it requires something, or if I just got a bad copy or whatnot?

Aside from this, I was wondering if anyone could point me towards a good speech-creation utility that I could use to have my Atari say something on startup.

1013. MIO and bbs speed

Newsgroup: comp.sys.atari.8bit
Date: 1997-01-30 00:00:00 UTC
From: James Anderson <0James@msmlab.byu.edu>
Message-ID: <0James-3001971629100001@128.187.141.103>
Source record: 76243

What is the fastest bbs speed supported on ICD's MIO?

Also, can any new hard drive be attached to the MIO's SCSI interface?

I'm trying to get all the tools necessary from me to get my 800xl up and running again. I do have a Supra 20 meg 8-bit hard drive with a supra 800xl connection. But my disks with the Supra Hard Drive drivers and system info (or something like that) aren't around. Does anyone knwo where I can get a hold of appropriate drives and software that will allow me to get myset up working again?

Thanks

BASIC XL (not turbo basic xl) was an O.S.S. product that was a
precursor to their BASIC XE. It was indeed a "super cartridge." I
happen to have one.

> - Bob Stone

When I first got an 8bit, their were a few stores around this area that carried them, and items for them. I would look through their catalogues and look at the prices to figure out how much I would be spending.
I found B&C to be very interesting, as the price that they had in their catalogues for many things was different than the price in the store. With them, I always found that I would end up spending LESS when I went to the store. One example was the SX212, which they had in the catalogue at the time for like $75, but when I went ot the store, it was marked like $60. I also found that if I went to some of the "salvage" computer places I could get things even cheaper at times. A buddy of mine picked up a music program for $25 at one of these places, and we went over to B&C (which was about 2 miles away,) and they were selling the same one for like $135. I only go to B&C only if I can't find it elsewhere.

Howdy !

I'm a fan of the great Activision games. But I don't know what games they converted to an Atari version. Does anyone have a complete list of Activision produced games?

thx for all hints!

>once was, [Snip big over-melodramatic Sap Letter]

Get a grip guys... I was once an Atari User and all I had to look
forward to was a lack of software, non-existant tech support, buggy
operating systems (TOS Ring a bell?) and always wanting to do what the
Mac and IBM (Not to mention AMIGA) could do..never really achieving
it. The real Evil was the Tramiels who couldn't get off their fat
white asses and market the machines they produced properly, or for
that matter at least care about their customers... I think when I had
to send away money for a floppy cable from Britain is when I woke up
and grabbed a clue... A big blue clue... So Windoze (and still isn't)
as bug free as they said it is. Well, you're dead wrong if you think
that TOS was some big model of perfection...Far from it.

In my opinion, the Jaguar was a hastily produced, crappy fragile
machine that was once again marketed half-assed with games that looked
like 2nd generation Genesis and SNES titles... Pretty sad for a
so-called 64-bit machine.. And here's a correction... The Jaguar was
one 32-bit and 2 16-bit Symettric multi-processors. There is nothing
64-bit about the jaguar at all. Except if you add the processors's
together, which is one big cop-out.

The only hope for Atari is that they don't lose even more money, or
for humanity's sake, the Tramiel's going into business again... I'd
certainly hate to see market share for another company jump from
thriving to downright pathetic. Monkey's could have managed Atari
better. BILL GATES could have managed Atari better...

So in the meantime let's GET OVER IT. And use the machines of today
and quit wasting time and bandwidth and being hopeless romantic's
towards people who didn't really give a shit about you or me, or
anyone..except how to make a buck a run like a petty mugger off the
street...

Reply's EXTREMELY welcome...

Shellac...

Tell me about it! =) I never said I was a genius Win95 programmer, far from
it
actually, but I am learning. GEM only took me appx a month or two to master
easily.
Win95 it taking considerably longer than that to even feel confortable
with. (sigh).

I have a single pixel vertical line that runs most of the height of my screen and about 10 pixels from the left edge. Most of the time it's not a problem but I've noticed in some games it acts as a barrier to my players. Is this most likely a GTIA problem? Was there one part # for the GTIA in an 800xl?

>there?

Hi. There is software for the Atari that lets it view GIF's as best
as the Atari can. It uses mode 11 or 9 and then makes thre screens of
the image in different three different tint colors. It then rapidly
page flips between these screens. This is the best the Atari8 can do
I think with GIFs. The program is called Color View I think by Jeff
Potter? Haven't used it since maybe 91 so hard to remember. The one
thing that would help though is to maybe reduce the pic to 256colors,
and to a resolution that is max of gr 9 or 11 or whatever it is.
Reducing file size would help processing time on the 8-bit greatly.

Cheers,

Jon

There is a program called "SAM", (Software Automatic Mouth).
It uses phonetic input to re-create actual speech. You should be able
to find this at Yogi's archive.

ftp://ftp3.cyberspy.com/atari8/yogis_site/

If not, I have it on disk somewhere's about..
Let me know the best way to send it if you need.

I think they are "specially sized" ATR files, just big enough to run
the program that's in it.
With the SIO2PC or APE programs, you can make virtually any size disk
image, I myself had to create an "oversized" image so I would have
just enough room to put some binary files I made of all the various
DOS's I have. This turned out to be slightly larger than a Double
Density disk but was actually in single density, and needed a modified
loader to access sectors 1024 +.
Anways, I'm gettin off the track here- or am I? Ok, I recently
recieved a couple of great little programs, MyDOS only I'm afraid. One
called FL.COM which will allow you to load any binary file off a
MyDOS disk of any size. The other is called TNAV.SYS which is an
excellent File Manager, it has a 2 column display showing 2 different
disk DIR's, and the usual functions for copying etc. There is a bug in
it however, when you enter a Directory and press ESC to go back to the
previous DIR, it shows the DIR change but the file list remains
unchanged. Anyone got an updated version? (BTW I tried this under
SpartaDOS, but it crashed dismally).

: screen of Norton Commander. Being able to see source and dest directories
: would be really nice.

I hated SDX's MENU when I had to work with my BobTerm diskette since it
had all those directories.
When I had a PC,I hated programmes that would search my entire 300+MB drive.
(and at 300k a second to boot)
It took forever.

Also it (MENU,not the PC) always read all 8 sectors of a MyDOS
directory even when there were only 1 or 2 files.
At least make a option to just read the current directory.
Also let the user type in any path that they want,so that we are not
limited to 9 drives like MENU is.
(important when a DOS comes out that suports the IDE drive's 15 partitions)

: "A stroke of the brush does not guarantee art from the bristles."

I remember that quote!

: The current FAT system uses links similar to Atari DOS. NTFS and
: possibly FAT32 use mapping similar to SpartaDOS. I had to laugh at MS

I'd assume that NTFS would work like UNIX and Apple ProDOS file systems.
What's FAT32?
VFAT is just MS-DOS with aliases hacked on.
MS-DOS has one huge "FAT" (really a DAT) that takes the place of real FATs
like SpartaDOS and AppleDOS and CommodoreDOS.
So basicly the directory entry for a file lists the first sector of that
file,like AtariDOS.For DOS to find the next sector,it must look at the FAT.
For instance,if the next sector is sector#100,then it looks at the 100th
16-bit word of the FAT,which contains the number of the next sector.
If you need to seek to the end of a big file,this can mean a lot of disk
access,especially if the file is fragmented,which would mean that it would
be reading in FAT sectors for other files as well.
Of course 16-bit numbers can only go up to 65535,so usually sectors are
grouped to-gether to form logical sectors or "clusters".Thus sector#100
could really be sector 400 or even 800.
(on big HDs,clusters can be 16k!!!)
Of course in SpartaDOS,DOS must read in the first FAT sector("sectormap")
of a file to find the next FAT sector and so on.So seeking through a file
on a un-fragmented MS-DOS disk gives about the same amount of disk access
as on a SpartaDOS disk.But if the MS-DOS file is fragmented,it may need to
go all over the FAT,even to the point of re-reading the same sector TWICE
if there's not enough buffer-space.And,of course,the only way for MS-DOS
to go BACKWARDS in a file is to go back to the file's first FAT entry and
re-trace.SpartaDOS sectormaps are double-linked,meaning that each
sectormap/FAT has a pointer pointing to the previous sectormap and a
pointer pointing to the next sectormap.

Oh,and sectormaps are called different things on different DOSes.

Apple/Ms-DOS:FAT
Commodore:side sectors (most files don't have them and work like AtariDOS
intra-sector linked files)
UNIX/ProDOS:indirect sectors

Oh,and UNIX/ProDOS's indirect "blocks"(i.e.sectormaps) don't have links to
eachother.
Instead,a "doubly indirect" block lists where all the "singly indirect"
blocks are.(and in Linux,there's even a "triply indirect block" to list
where all the doubly indirect ones are")
So on a moderatly sized file,it only takes two sector reads (note that a
PRoDOS 512-byte "sector" is really two 256-byte sectors) to reach anywhere
in a file.And if a small file,ProDOS will dispense with the doubly
indirect block and just use the one singly indirect block.
And if the file is less than 513-bytes,then there's no indirect blocks at all.

And under UNIX,there's room for listing 12 blocks(which are 1024-bytes
under Linux,512-bytes under other UNIXes) before a doubly indirect block
needs to be allocated.And a triply indirect block gets added if the double
indirect block fills up.(the twelve single blocks and the singly indirect
block still are there too)
The same if the doubly indirect block fills up.

Hmn,you might want to put that in a FAT faq!

: that it took them so long to come up with a better FMS. SpartaDOS has
: been doing it on the Atari since the early 80's. But then, it took MS
: until DOS version 5 to replace the junky EDLIN with a full screen text
: editor (EDIT). Go figure.

I hated EDIT.I tried to use it to change the file name in a programme and
it hardly showed any of the file.It's nothing compared to our TextPro!
(that is,most of the file showed up as spaces)

Edlin was really just for editing AUTOEXEC.BAT and CONFIG.SYS.
It wasn't supossed to be used for anything but configuration files.
It's just there so you can get along until you download Qedit or Elvis.

: >has been used since '79... on 810 drives and Atari DOS...

: Sorry, but I have to say that I am laughing loudly now. It's pretty
: absurd to think that something like the Atari DOS will be used in a modern
: OS. Atari DOS is "linked" because each file is a linked list: the last
: three bytes of a sector are a pointer to the next sector in a file. This
: is a horribly inefficient method of keeping track of which sectors are in
: a file. For example, you cannot do random accesses. If you want to open
: a file and move to the end to add some more data, you have to read the
: whole file.

Commodore had it both ways.Most files were like AtariDOS.
But programmes like Databases could create a special RELative file,that
had sectormaps ("side sectors").
In adition,each side sector pointed to all the others,so seeking was
actually faster.(there would never be more than six side sectors)

I think that Atari told OSS to make DOS this way so that there wouldn't
need to be a seperate sector buffer to hold the sector map.
(under Commodore DOS,using REL files means that you can open fewer files
at a time,since more sector buffers are used per REL file)
SpartaDOS gets around this by having dynamic "sector buffers" instead of
AtariDOS's "file buffers".(and "disk buffers" to boot!)
This is also probably why they made the 1050 a 128-byte double density drive.
The file&disk buffers would twice as big.
(and we have to have file&disk buffers,even the RAM disk needs a disk
buffer of it's own.And a file buffer is used up when you open a RAM disk
file,even though you really wouldn't need one,and it'd just slow down
access anyway.I think that MS-DOS has the same problem)

: This is exactly what i meant with linked file system for windows. At the
: end of each sector will be a pointer to the next one. And MS sells it
: as a advanced technology to avoid the old FAT...

Oh yeah,I forgot to add that MS-DOS disks don't have bitmaps/VTOCs.
The whole FAT is scanned.(it can be as large as 128k)
Thus it's like SpartaDOS running CLEANUP everytime it needs to figure out
where to put a new sector.

: I agree that it's inefficient for random access.

I still find this hard to believe.Are you sure that the FAT doesn't still
hang around for those programmes that need to seek? Does it have a
VTOC/bitmap as well?)

Of course under AtariDOS(and MyDOS),a database (or whatever) could simply
make up a index file listing all the physical sector locations for it's file.
It can then just seek to that physical sector location,making seeks faster
than SpartaDOS,especially with large files.
(presumming that the whole index file can be held in memory)
There's a byte at the end of each sector that tells what file it goes
with,so seeking to the wrong sector gives an error.
(unless that sector used to belong to a file of the same place in the
directory,hence you should use a frashly formatted disk)
Of course MyDOS disks with over 720 sectors don't have this number,so you
should use programmes that seek ("POINT") on single and double (but not
ENHANCED!) disks.
(RAMdisks under721 sectors long will work too.Anything not over 720sectors
will work as well)

Of course the database file itself should be on a 720(or less) sector
disk,the programme itself can be anywhere.

: Well, I guess I HAVE to get my 2 cents worth in on this one.... If you
: combine both the sector links, AND the FAT, you have fast random access.
: AND File Integrity. The "New" MS technology is doing just that, and I
: have to say it IS an improvement!

So,Amiga "old" file system disk and Commodore's REL files do the same thing.
Hardly new!

I was finding it hard to believe that they had abandoned random access
altogether.Of course the limitations on reverse-seeks still stands.But
this can be bypassed with something like SmartDrive.
(I used Norton Utilities' cache,myself)

Are you running this program on a real Atari mahine, or on an emulator?
The only examples of digital speech (or any digital sounds for that
matter) I know of use volume only sound mode. I don't know of any
emulator that handles this (although last time I e-mailed Markus
Grietzen about the problem, he said it is a possibility for upcoming
versions of XL-IT!!!). If you are using it on a real computer, sory - I
don't know why it isn't working!

Source record: 76329

As many people were interested in the reason why Sparta-DOS doesn't
work with XL-it! (and other emulators) I report how I got it to
work with XL-it!:

o SpartaDOS 3.2g (the version I used) loads a few sectors
with the OS routines and then it uses it's own routines.
There was a bug in my SIO-emulation that caused a "system-lock"
at this point.

o Then the '?'-command is used. It wasn't emulated.

Now SpartaDOS works fine and I hope to get 0.17 out soon.

Bye,

Markus Gietzen

Actually EDLIN was for general purpose text editing. It just happened to be a line based one instead of full screen. And you HAD to "just get along" until you downloaded a REAL text editor because EDLIN stinks. As far as using EDIT for editing a binary.... bad boy. It's a text editor. Get a hex editor for binaries... no more worries about too many spaces. :)

Cheers,

Jon

I have just placed a file called SDOS51.ZIP in the "utilities" section
of my home page. It has a Diskcommed file of the SuperDOS 5.1 disk.
Using SuperDOS, load AUX.SYS which is found on the disk. You then are
at another "DOS" menu, select <R> write SuperBIN. Make sure you have a
formatted disk, either S/E/D density to write to. Then you can copy up
to about 20 files you want to load onto the disk, and boot it up.
Of course not all the files are going to run, there are always
problems with any "boot sector loader". So experiment a little, and
see how they go.

>and other Atari 8 bit dealers accept business from outside the CA area.
>
>- Bob Stone
>
>
>

This is utterly *FALSE* both can and do accept business from outside California as I've ordered from both and mail order is a heavy part of their business. On top of it all it makes absolutely no sense. Whoever orginated that story is completely ignorat of facts as Toad is now and always has been located in Severna Park Maryland, to claim they only mail order in california is at best foolish.

From: ag608@freenet.toronto.on.ca
Message-ID: <E4y268.Fos.0.queen@torfree.net>
Source record: 76337

Greetings

I picked up an atari 800 recently with a monitor but no drives. Since I had an ATR-8000 sitting around and I wasn't using it I decided to use it to interface 2 drives to the 800.

Problem is when I use the two tandon ss/dd drives with the ATR as drives 1&2 the computer won't boot from drive 1 but instead resets to the memo pad. When I substitute a Tandon ds/dd set for drive 1 I get a boot error. I've configured the drives and the ATR correctly. I have also established that the 800 boots from my atari drives (both an 810 and doubled 1050) and the ATR works fine on my 130XE. Nor are my dos disks defective (2.0, 2.5, mydos, & machdos) as I've used them to boot up with.

Anyone who's owned an ATR8000 and had a similar problem remember how to beat this problem?

we simply need an E: replacment device-handler. I found a good one in the
UMich archive somewhere. Really faast 80 char screen - DOS2.5 runs after
loading in a 80 char screen with a coloured cursor much faster!

1070. CES 1984 Atari & Sierra News ?

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-01 00:00:00 UTC
From: Bernd_Mueller@t-online.de
Message-ID: <5cvscn$9eu@news00.btx.dtag.de>
Source record: 76343

International Consumer Electronics Show (CES) 1984 in chicago :
Atari introduce some new software titles for the Atari 8-bit computer-system. The titles are Ballblazer and Rescue on Fractalus (in cooperation
with Lucasfilm), Crytsal Castles, etc. , all well known games for our Atari.
They also shows two new space simulation titles "This is ground control" and "Through the Star Bridge" the beginning of a series which Atari called the "Futuremakers-Series" !
Another title which was shown by Sierra-Online was the follow up to "Bc's quest for tires" called "Grog's Revenge" !

But who are those titles ? I never saw them in my atari life.
Who knows something about them ? Did they ever saw the light of day ?
Has their titles changed or what happend ? Who has those titles ?

Please let me and the other atari-users know !

Any information would be greatly appreciated.

>
> -Tony

Jeff Potter wrote a number of graphics utils for the 8-bit that handle GIF files; programs like JView. Most supported 4096 colours (RGB screens in 11 shades), or 8 colours in 320x200. They should be at Umich.

Who ever said I wasnt a pirate?
Not only am I a pirate, but I cracked the stuff too, so I should get double duty flaming.....
Seriously, the only reason I started the archive is because I lost all the stuff I had PIRATED in 1985-1982, and noticed that there is no site like the c-64 and apple ones in existence (even the vic 20 ones!)

EVERY computer platform has an archive site. (MSX, CPC, Amstrad, Timex sinclair, apple, trs80, coco, colour genie (whatever the hell that is), c-64, amiga, et.c.etc.)
YET there were NO Atari 8 bit sites. (Or ST sites, for that matter).

Why is that?

At any rate, I will be happy to remove the archive if toad or B&C computers objects to any of *THEIR* in-stock software is there.

Like you said, we're pirates. Sorry.

1075. SIO-Protocol/Comands

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-02 00:00:00 UTC
From: Matthias Belitz <matz@kawo2.rwth-aachen.de>
Message-ID: <32F3F4A8.6BA9@kawo2.rwth-aachen.de>
Source record: 76346

Hallo !

Whole development-time of our IDE-Controller I had to deal with the
possible SIO-Commands diskdrives would accept. Now I have the idea to
collect all the possible commands and figure out, which drives will
support it - so I want to designe a list of it.

This is what I figured out at this time, please send your remarks:

-------------------------schnip---------------------------------
$52 R Read sector
$50 P Write sector
$57 W Write sector with verify
$53 S get controller status, returns 4 bytes
byte 0 drive status
bit 0 - Command frame error
bit 1 - Checksum error
bit 2 - Operation error
bit 3 - Write protect
bit 4 - Motor on
bit 5 - double density
bit 6 - unused
bit 7 - Dual (medium) density
byte 1 controller status, returnd values are inverted
bit 0 - busy
bit 1 - drq
bit 2 - lost data
bit 3 - crc error
bit 4 - record not found
bit 5 - record type
bit 6 - write protect
bit 7 - not ready
byte 2 time-out (format); $e0
byte 3 unused; always 0
$21 ! format disk (single for 810 and stock 1050)
as defined by CMD $4f for upgraded 1050 and XF 551
(heard, that they will give back 128/256 bytes?)
$22 " format enhanced (medium, dual) density (1050)

This was the standard command set of 1050 (810) drives

$4e N read drive configuration; returns 12 bytes
byte 0 number of tracks [1 for harddisks)
byte 1 step rate
byte 2 sectors/track high (total number for harddisks)
byte 3 sectors/track low

byte 4 number of heads decreased by one
byte 5 format (0=FM; 4=MFM)
byte 6 bytes/sector high
byte 7 bytes/sector low
byte 8 drive activated
bytes 9-11 unused
$4f O write drive configuration; see above
$3f ? get high-speed-index
Happy, US-Doubler, HDI (Germany) return $0a
Speedy (Germany) returns $09
These are supported by all double density drives.

Special Speedy (Germany) commands:
$20 format automatically, acts like $21, but computer has
not to wait till drive is ready
$51 stop write command, writes all data from internal buffer
to disk, stop motor then
$44 configure drive/track display
$4b configure slow/fast
$4c direct jump command for internal processor of 1050
jumps to location stored in DAUX,$30a
$4d jump, as above, but drive sends a "COMPLETE" bevore
jumping
$41 add/remove command to/from internal command table
$68 get length of internal high-speed-SIO-subroutine
$69 send high-speed-SIO-routine to computer
$60 write track, writes complete track
$62 read track

US-Doubler:
$66 format disk with special sector-skew
-------------------------schnap---------------------------------

Thanx, Matt

IDE devices have their own controller. It is an IDE 'interface' you
are building? There is tech specs on IDE (I may even have some
around) controller circuitry but a lot of drive makers deviate from it
since they think they can get away with it since the controller is
right in the drive. The deviations are usually supersets though. The
interface has a spec too I think... maybe it was on Western Digital's
site somewhere? hmm...

Cheers,

Jon

1077. My WWW Atari 8bit Gallery Needs More Original Artwork

Thanks, but this documentation we had found very quickly.
The problem began, when I had to decide, which ATARI floppy command I
had to emulate and which not. So it seems to be a problem for emulator-
programmers, too.
That was the point to collect all known commands, an ATARI-compatible
floppy (or emulation of this) ever would be accept.
If there is no further interest, I will not bore you any longer, but I
thougt, it could be ...

Matt

I have never replied to this thread of messages, but I have this to add:
The disappearance of the archive would probably be the death blow to the online atari 8-bit world.
In addition to the many FTP sites Commodore fans have, I just read in their newsgroup that someone is putting out a CD-ROM with 15,000 yes, that's fifteen thousand games and programs!!! Even though the new stuff from Europe is far better than anything you could program on the Commie, we'll never have the sheer numbers.
Bottom line: Leave alone the little online support we have, please!

1085. Looking for broken 1200XL board..

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-02 00:00:00 UTC
From: kheller2@ix.netcom.com
Message-ID: <5d2min$jpg@sjx-ixn3.ix.netcom.com>
Source record: 76356

A few weeks ago a user obtained a 1200XL that didn't work. He then purchased a working 1200XL board. I was wondering if he would sell me the broken 1200XL board.

Actually, if anybody has a dead 1200XL board (but has all components) I'd be interested in purchasing it for a few bucks. 1. So that I can attempt to repair it, or 2. use the pieces in a 1200XL I'm building from scratch. =)

Yes, I have a bare mother board and am building it from the ground up...sick eh? (Pretty darn fun actually, since I can actually build Super Video into the thing, add a PBI, etc..)

Oh. Well I guess I could be sued couldn't I? We could get into another big flame fest on here about copyright issues. I don't want it. I won't argue back and forth about it. I suggest that you do whatever your conscience dictates, and not try to stick your nose into what other people's conscience dictates. I for one will ignore anyone questioning my morality or behavior in regards to this issue, save for possibly the copyright holder himself. As far as I'm concerned, that's the only entity I will reason with upon this subject.

I have been silent on this subject publically until now. This one time I will breifly summarize how I feel about this whole battle. Basically, I say that the arguement of those that defend the copyright and hold it high above all else are.... drum roll please.... absolutely correct that copyright violation is in the wrong! There is more to the story though obviously. You see, rape and murder are in the wrong also, as is j-walking or throwing a cigarrette butt on the street. For me, at this stage in the Atari 8-bit's life (death?) the _magnitude_ of the wrong-doing in violating some of these related copyrights to me falls into the level of the j-walking or butt throwing. I admit it is wrong, but not by much. That's how I feel about it. So get off my back in advance (not directed just at you Thomas, but anyone who reads this).

Only someone who's copyright I violate do I want to her any flak from.

Okay, buf said already by me.

Cheers,

Jon

1089. Re: Question on GIF's and Atari

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-02 00:00:00 UTC
From: Anthony Bufort <ajbufort@mail.sas.upenn.edu>
Message-ID: <32F4E582.102C@mail.sas.upenn.edu>
Source record: 76360

This goes out to all who mailed me with their advice regarding GIFs...

Thanks. :) But I must have sounded like a real newbie if you thought I was asking "are there any programs written for the 8-bit that can display GIFs." Now that I look at my post, it came out very much like that, didn't it? :)

Okay... what I meant was, are there any programs out there which will "cleanly and neatly" (and by that I mean no DLI tricks or other "non-conventional methods", no matter how clever they are) let me display images I might create on, say, Photoshop, given that I obey the restrictions of a particular graphics mode?

I guess another way to put it is... if I set Photoshop to obey the restrictions of a certain Atari graphics mode, and then save it in some format or other, is there a way I can somehow use that to eventually view it normally on my Atari? I'm not talking about a program just to view the image, look at it, and that's it... I mean a "slice of code" really, which will allow me to load into memory pics I created with Photoshop, and then view them or page through them as I see fit using say a page-flipping technique.

I'm looking for a method, I guess you could say, which will only need to do minimal tinkering with the file before it could be usable in a normal Atari graphics mode. I was thinking that maybe I could save my Photoshop images in "RAW" format and then write a routine on my 800 which would translate that into something I could load into memory and view in a graphics mode... but I'm not sure how RAW saves the image data. Of course, I would have to set the parameters in Photoshop so that the file, once saved, was not much larger than the amount of data the Atari would use to represent that same image data in one of its graphics modes - otherwise, why bother, right?

OK... WHY do I want to do this? Because I love Photoshop and its editing capabilities, and I thought it would be neat to create my images in Photoshop and then use them in my 800 programs.

Hope that was at least a _little_ clearer. :)

-Tony

Some games need the 400/800 Operating System.
I have both games - but on disk - and they run on a 130XE (should run
on a 800XL) but the files can be different from the cartridges.

To run 400/800 specific games on a 800XL/130XE you need a "translator"
disk: this boot disk loads the old OS in the RAM under the OS-ROM
(remember: 600XL/800XL have 64K RAM - only 48K used as "normal" RAM as
in 400/800 - 16K RAM "sleeps" under the OS ROM) and then switches the
RAM on instead of the ROM: and then you have the old 400/800 OS
running again on your computer.

Look at http://ftp3.cyberspy.com/atari8/yogis_site for a
translator-disk. If you don't find it, let me know and I'll email one
to you and upload it also to yogi's site.

Feel free to contact me.

I agree completely. I for one applaud Yogi for taking the time to
maintain the Atari archive when most everybody else has forsaken us.
And I honestly don't think companies like Toad and B&C Computervisions
are hurt that much by the presence of such archives, unless most of
their profits come from software sales and they can boast a software
library of over two or three thousand titles (probably more than that
on Yogi's site)?
If I wanted an Atari 8-bit game or software title really bad and it
was available on both Yogi's archive and, say, B&C (_hardly_ a walk
down the block from NYC), I would buy it from B&C if not for the
principle of the thing, to get the docs along with it (more important
with things like word processing programmes, etc. than with games),
but only if it were at a reasonable price (face it, software is NOT
fine wine, it doens't get better or more valuable with age....ten year
old floppy disks won't exactly hold their data quite as well as a
brand new one).
As for the copyright holders themselves, as Yogi said, where are they?

1103. Were these games ever made for the Atari 8-bit?

Newsgroup: comp.sys.atari.8bit

Source record: 76272

I was hoping to find some of my old favorite games from my Apple II and Commodore 64 days. After looking over what friends had and what was at Yogi's site, there are some games which nobody seems to have for the Atari, so now I'm wondering if these games never got Atari versions and my search for these are in vain.

If you know for sure that an Atari 8-bit version of any of these exists, please let me know:

Apple Cider Spider
Bop 'n Rumble (Bad Street Brawler)
Dino Eggs
Gemstone Healer (SSI)
Kung Fu Master
Nemesis the Warlock
Sammy Lightfoot
Super Cycle (Broderbund)
Winter Games (Epyx)
World Games (Epyx)

There are many others I've never seen for the Atari, but these are the main ones that come to mind right now.

They're probably just like a raw XFD (on the pc) file.
If you xfer them to the pc and rename the extension to xfd, then use
"imagic" (from APE author's homepage) to convert it to an atr, it will
probably work fine.

First an XFD file has always the same length of 92160 bytes (or more for
enhanced). These files are shorter sometimes.
Then I had a quick look at a file, must contain a SD formatted disk.
The beginnig was filled with a lot of $46 ..., the first sectors starts
a few bytes after that ...

Hallo !

There is a busted XL here. It only shows a red screen, nothing else.
And anotherone shows a yellow one.

Does this colour mean something special (m,aybe where to find the error
in ?)

Matt

The best way to display a GIF with no display list tricks is using Jeff Potter's JVIEW or APACVIEW in one of the mono modes. You could then save the picture and load it into a paint program to change the color registers.

Life expectancy for low level players is not very good. The only way I could actually get a character started and on the road to a level advance was to SAVE the game very often. Mostly I saved as soon as I had a battle which I won and gained ANYTHING! This includes petty cash, jewels, gems, weapons whatever! The whole process is very time consuming, as you have to re-load the game again after saving. Make sure to BACK-UP the character disk after EVERY save. That way if your character dies, you can re-copy the save-disk and start again from before you died. Another tip- MAKE A MAP. This took me quite some time to accomplish (about 3 years I think). So, get started ASAP. When I first decided to make a map, I used large/coarse graph paper. After mapping out sections I found that the whole city would take up more paper than the book had, so I changed to very fine graph paper. It took me ages to re-copy the maps I had done onto a smaller size, but it was worth it.
Now to some trivial stuff. The various jewels and gems you find are not valued when you have them, so when you find a Bank to sell them to, SAVE the game before you do. Then repeatedly enter the bank (by loading your saved game), and see how much you get for them. If they are not valued at very much, re-load the game and try selling again. The value will be different from the previous try, and if it's more (or LOTS) then continue with the game. (Save it here too).
Go and buy a COMPASS the very first chance you have, this is very important when mapping.
Walk into EVERY wall you see, you may just find it's a secret room. (Believe me, there are lots of them) Beware tho, some "secret rooms" you cannot get OUT of (NOT too many of these tho).
If you find that a potion gives you "Treasure Seeking" , SAVE the character. Then while "Treasure Seeking" is working, you will find heaps of stuff after every battle. If you don't think you found very much after "Treasure Seeking" wears off, all you need to do is re-load and try again. (Again, very time consuming)
I still have my Character disk with a LEVEL 12 character, who has 250 hit points, 72 strength, and most other attributes over 30. I took

this character into the DUNGEON, and found that he is NOT as powerful as he is in THE CITY. (Even tho he has the fabled MAGIC FLAME-SWORD) I don't remember how long I actually played the game for, but every night when I came home from work, or my friends place or wherever I was, ON went the ATARI, and IN went ALTERNATE REALITY!! No matter what the time was, it was TIME to PLAY AR!

I know I know, I'm ramblin on here.... But between M.U.L.E. and Ultima 1, II, III, and IV, Alternate Reality was ranked MY FAVORITE.

So have a GREAT time with it, you'll need lot's of time too.....
Good luck, and may the Gods favor you with the MAGIC FLAME-SWORD!

1117. Q: What is this video mode?

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-03 00:00:00 UTC
From: Anders.Skelander@uab.ericsson.se
Message-ID: <5d4uf4$n7o$1@euas20.eua.ericsson.se>
Source record: 76286

During the Christmas holiday, I wrote a small BASIC program
to display multi-colour graphics on a 80*192 pixel screen.

I am not sure what the number of this graphics mode is. I
think it is BASIC mode 11. When it is active, address 704
(decimal) controls the background colour, and addresses 705
to 712 are palette entries for colours one can draw with.

But 704 to 712 is 9 colours, which is a strange number. Does
anybody know what the physical representation of a pixel is
like with this mode? 3 bits per pixel would give 8 colours, and
if it is 4 bits, one would get 16 colours. If the mode I am
referring to is 4-bit, are the unused bit combinations wasted?

I agree. There has been a lot of Flak flying about the copyrights regarding Atari stuff. Ok, copyrights are designed to protect the Author/Owner of a particular piece of software/manuals/Hardware schematics etc from losing money on it by someone else "pirating" it and trying to sell it for their own gain. YEH! Ok. Who is trying to SELL anything? (Besides B&C etc but I won't get into that).
Yogi has built his "archive" for the sole purpose of making available software that most Atarian's would never have seen or even heard of. Is he selling that software? NO. Is he making any profit by having the archive? NO. I say that unless there is any profit, why quote COPYRIGHT!! Unless you own the copyright for that piece of software!! Granted, if the copyright owner would speak up, then I'm sure that his "piece" of Atari would be taken off the "publicly available" list. I'm sure the owners of the various FTP and WEB sites would only be too glad to accomodate him/her.
Suffice it to say that Atari software is getting rare, and passing it around the "Net" is the only way that it will exist! Of course if you really like something, go BUY the original and support the flagging 8-BIT vendors like B&C etc. Keep them happy too!

Just my thoughts from "down under" here in OZ.

(hey you guys are lucky to have 8-BIT vendors. I live in Western Australia and there aren't any computer stores who have even heard of Atari 8-BIT computers! let alone stock anything for them)

It's mode 10. In theory, you should get 16 colors (4 bits per pixel) as
you do with modes 9 and 11. Unfortunately, there are only 9 color
registers supported by the hardware--five for playfield graphics and four
for player/missile graphics. Mode 10 uses them all. Modes 9 and 11 use
only one color register, to control hue (mode 9) or luminosity (mode 11).

To stop a "flame-war". It seems that several newsserver are
wrong configured. If you take a close look at the date of the
multiple posts you'll notice that it's the same posting.
It's a problem of the newsserver and not of the individual poster.

I'm certain that's true. As the author of Mydos, I can say that at
least a dozen or so times I have been asked if I really released Mydos
as free software. If I thought anyone was getting rich off it I'd
probably be a bit irritated, but I think that hardly likely ;-).

1127. Q: Atari XEM w improved sound chip?

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-03 00:00:00 UTC
From: Anders.Skelander@uab.ericsson.se
Message-ID: <5d58vs$pu7$1@euas20.eua.ericsson.se>
Source record: 76296

Back in 1985, before I had replaced my 600XL computer with
an 130XE, I read about an Atari XEM computer. It was supposed
to have better support for music, and my interpretation of
that description was that the computer in question had a
better sound chip.

I was really looking forward to the release of this computer,
but it never appeared in stores, so I bought the 130XE instead.

Has anybody heard of the XEM computer?

I think I read about some other Atari computer model with improved
sound capabilities in an article published in Compute! immediately
after the Tramiel takeover. My memory is a bit weak, but I believe
an Atari executive named Siegfried Hartmann (sp?) referred to
a model called AKA 800XL in that article.

I think Bill/Big Five originally worked on software for the TRS-80 line
of computers. I know I've got a few good oldies for that. Regardless,
though, his e-mail address can be found at:

: Microsoft's InternetNews *DOES* give you the size of a message before
: you download it! (This message was 16 lines long!)

Can't you people see the headers of messages before you read the messages?
I'm assuming you're using some NNTP type thing where each message gets
download to you're system in it entirety before you can read it.
I usualy just run a news reader on the UNIX system itself.Much faster.

There's usually a "lines:" header that tells you how many lines there are in a
message.(Obviously!)

: >>
: >> Thanks,
: >> Tim Polucha
: >
: Some games need the 400/800 Operating System.
: I have both games - but on disk - and they run on a 130XE (should run
: on a 800XL) but the files can be different from the cartridges.

: To run 400/800 specific games on a 800XL/130XE you need a "translator"
: disk: this boot disk loads the old OS in the RAM under the OS-ROM
: (remember: 600XL/800XL have 64K RAM - only 48K used as "normal" RAM as
: in 400/800 - 16K RAM "sleeps" under the OS ROM) and then switches the
: RAM on instead of the ROM: and then you have the old 400/800 OS
: running again on your computer.

"Mapping the Atari" has a section about how to alter the 800 OS when it's
in RAM.

: Look at http://ftp3.cyberspy.com/atari8/yogis_site for a
: translator-disk. If you don't find it, let me know and I'll email one
: to you and upload it also to yogi's site.

But if you upload it as a ATR file,he'll need a 1050 (or better) to
download it.

DCM is the better choice.Both Atarians and emulator users can use it.
And it's MUCH smaller.
(there's a PC programme called DCMtoATR.Even without that,you could simply
run Diskcomm under the emulator)

: 800...
: >most of my programs are on DSDD sparta formatted disks, and I like
: sparta :)
: >
: >Any help is appreciated.
: >

: Chris,
: The SpartaDOS X cart should work on the 800. I'll try it on my 400
: and get back to you. Simce it is mostly in the Cart, it should work. I
: sorta remember, back when it first came out, that it could run on the
: 800 with at least 48K.
: I love SDX and wish it could be made readily available and upgraded
: again. I'm sure you can come across the 4.x carts somewhere. Try B&C
: Computervisions

Of course you won't have enough memory to run many programmes.
Just get SpartaDOS 1.1 so that you can at least ACCESS your disks and copy
them all to Atari disks.(using SPCOPY)
Then you can use MyDOS if you want to use double sided/density drives.

Folks,

I seen High Score lists for just about every console but the Atari
8bit. When I did find a list it had been discontinued.

Well,
If you've got a score you want the Web to see Ive found a site that is
once again tracking Atari 8bit High Scores (and other lesser
consoles/computers :)).

Anyhow,
I dont know how long the Atati 8bit section will hold if we dont get
some competition going. Ive started with about 8-10 cartidge scores I
managed to get quickly. Check it out:

http://www.primenet.com/~rfm/cvhigh.html

Steve (read@my.sig) wrote:
: "Tracy" <(104317,440)@Compuserve.com> wrote:

: >Hello, I am a newbie with a question concerning how to run *.com & *.atr
: >files using xlit016 and xf25 Atari emulators. Can you explain what is the
: >difference and between these extension and please explain (in some detail
: >as I am a newbie) how to run these files? Thanks. If you do not have time,
: >could please forward this message to a newsgroups that might be
: >appropriate?
: >
: >Tracy
: >
: >Please respond to 104317.440@compuserve.com

: an *.ATR file is what is called a "disk image". It contains all the
: information that you would get as if you were using a real disk in a
: disk drive. The emulator(s) need the filenames of these ATR files
: placed on the command line to use them as a virtual disk drive (namely
: D1:) for example:

: XF25 MULE.ATR

: and then Xformer will start and "boot" the image MULE.ATR as the first
: disk drive. You can also add more image files (up to 8) on the command

Of course you'll be booting with BASIC,and MULE will horribly fail.
After Xformer starts up,you'll need to press shift-F10 to de-activate BASIC.

: line. *.EXE , *.COM, (and probably *.OBJ) files need to be placed into

Oh,and make sure not to confuse your Atari COM files with your PC COM files
as MS-DOS doesn't actually check to see if a file you try to run is really
a programme and will happily let you run a Atari game and then crash.
Perhaps Microsoft will upgrade MS-DOS to be on par with Atari's DOS some day.
(i.e.AtariDOS makes sure to only run actual programmes.The same goes for
Atari's BASIC,which is built into Xformer)

There really isn't such a thing as a EXE file on the Atari.They've just
been mis-named.

: an ATR image file before you can use them. You can place them on the
: command line just like ATR files, but you will have to have a DOS ATR
: file first, so you can then copy the EXE etc files into D1: . The way
: it works: for example:

: XF25 MYDOS.ATR FILE1.EXE FILE2.EXE

: When booted, you will have 3 drives according to MYDOS. you can then
: use the DOS Command [C]opy D2:FILE1.EXE,D1:FILE1.EXE
: and [C]opy D3:FILE2.EXE,D1:FILE2.EXE

: which will copy the 2 files into D1:, and after copying, the drives
: D2: and D3: will no longer be there as the files have been read to the
: end and Xformer takes them off.

What?!?
Is this some new feature of Xformer?Sounds like a crappy one to me!
I never had a problem with loading a file twice from a MS-DOS file.
(as opossed to a disk image)

Then again,it's been a long time...

: > Why don't other computers use this system. I have never heard of flipping
: > a disk on a PC or ST. Any help would be appreciated.

That's because it's impossible.So if you had a single sided drive,you
could only use one side!
On the Atari,you can flip the disk over,so there was never really any need
for dual head systems.
(except maybe for BBSes)

: some atari disk drives, like toms720 or xf551 could use both side of disk at
: the same time - they had two heads. same as disk drives in pc's or st's.

But the MyDOS documentation said that disks from one type of double sided
drive wouldn't work with another.

: in ataris, toms 720 could format disk for 720kb (used the same dd floppies as
: atari 1050 and others).

It probably was a double-sided double-density 80 track drive.

: > that TOS was some big model of perfection...Far from it.

Well,if you're going to buy everything new!
I always buy used from thrift shoppes and flea markets.

: No... but it's nicer than Windoze any day of the week. What you don't
: seem to understand is that all the extra functionality that you see in
: Windows is written into each an every application. For example, OLE.
: This is not some complex OS feature, but a standard communications
: interface implemented in many major programs.

Are you sure that it's not built into DLL files rather than the programme
files themselves?

I thought that OLE was a file format,not inter-process comunication.

: Also, Windows is a *PIG* to program, mostly due to the
fact
that, : unlike TOS (which seems to be unique in this respect), there's no
: systematic function naming (e.g. in GEMDOS, all file functions start
: with an "F", and all memory functions with an "M"). Under Windows,

: it's pot luck whether you even find the damn function you were looking
: for.

uh,that's really a matter of what programming language you use.The
functions aren't really named anything.

As for "file functions",Windows doesn't have any.That's what DOS is for.

: > In my opinion, the Jaguar was a hastily produced, crappy fragile
: > machine that was once again marketed half-assed with games that looked

: > so-called 64-bit machine.. And here's a correction... The Jaguar was
: > one 32-bit and 2 16-bit Symettric multi-processors. There is nothing
: > 64-bit about the jaguar at all. Except if you add the processors's
: > together, which is one big cop-out.

: You're right, the Jaguar was hastily produced, and some of the games
: were rather... well, SNES-like... However, it *was* a 64-bit machine.
: The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors,
: three of which are more or less completely dedicated to graphics, but
: could probably be used for processing as well, and one 32-bit RISC
: DSP chip to handle the sound subsystem.

: The 68000, contrary to popular belief (proliferated by the rather
: anti-Atari console press) is only actually used to process I/O, such
: as the joypad, and for "housekeeping tasks" - I assume this includes
: little things such as clocks.

I never did get a Jaguar!
And I have many,many different game systems and computers.

: > The only hope for Atari is that they don't lose even more money, or
: > for humanity's sake, the Tramiel's going into business again... I'd
: > certainly hate to see market share for another company jump from
: > thriving to downright pathetic. Monkey's could have managed Atari
: > better. BILL GATES could have managed Atari better...

: No - this is unfair. Bill Gates could probably have managed Atari
: better, but Atari was failing anyway; the major problem that they
: had was that the press were largely against them, resulting in the
: entirely juvenile behaviour of a large portion of their potential
: market (the "Oh - it's an Atari - well, it must be cr*p then"
: syndrome). Monkies, however, could not have managed it better. The

Why did the press hate Atari?

: Tramiels have actually done quite a good job; although you probably
: don't realise it, the Atari 2600 games system was the most popular
: console ever.

I concur!

From: cb541@cleveland.Freenet.Edu
Message-ID: <5d5kdj$k2n@alexander.INS.CWRU.Edu>
Source record: 76318

There was a thread, somebody asked about favorite demos for A8.
Now, Bill Kendrick really seems to be into graphics & sound
demos and has probably seen lots I haven't but here's some
I like. Very old 'Compy Shop' disk of demos. I liked the
Kaleidoscope with 'House of Rising Sun' music so much I
took it out and made a file of it. This disk is very old.
Latest one I've seen that's just fantastic graphics&sound
is 'Drunk Chessboard', probably from Europe, I got from
CTH BBS (Tom Hunt's, not the one in Australia).
Late but wanted to say this.

1150. Re: Confused about disk sides

: >on side 2 (I can't remember which) is totally invisible to the computer on
: >these drives, making it incompatible with the 551 in double-side mode.

: And the double-sided Trak drive, the AT-D4, treats each side of the disk as
: a different logical drive--i.e., if the Trak drive is the only one connected,
: you can format one side of a floppy and address it as D1:, then format the
: other side and address it as D2: without flipping the disk or anything.
: Although the second side is probably not readable by anything other than
: a Trak drive--you couldn't read it in a single-sided drive as a "flippy"
: since the drive motor would be turning backwards! (Anybody know this for
: sure? I'm just thinking aloud...)

That's how the 1450XLD disk drives would've worked.(and fast too!)
That really sounds like the best method,especially for boot disk games.
(that is,games that aren't stored in files)

I don't know if they still have them, but last time I checked, B&C
Computervisions had some M.U.L.E. manuals. Of course, they also came
with the packaging and original disk and cost $29.95. So I assume
that's not what you were after.

Ahh, Alternate Reality : The CIty.. now there is a game and a half. Hav
eyou tried The DUngeon? It's a lot easier and just as fun to play. I
beleive I had a text file floating around that gave some hints to AR:
City. And even a character editor to give you guy lots of health and
stuff.. but I was told AR: The CIty had no ending, hence you would play
it forever... someone correct me if I'm wrong.

Hmm. So, the latest PCs will have the following:

A DOS system similar to Atari DOS 2.0

Unified memory architecture, meaning the graphics system and CPU share the
same memory.

A high speed serial plug for "plug 'n' play" external peripherals.

Stop me if I'm wrong, but didn't Atari offer all that in 1979?

Bravo! The support you have by countless atari 8bitters far outweighes
the naysayers. You provide a service for 8bitters. Even though I don't
usae my 8bit much anymore, I can appreciate people that fight to keep it
alive no matter what they do. Whether be it an 8bit archive, an 8bit BBS
or an 8bit msg base....

Has anyone registered the full version of Rainbow? I've tried the demo version and the little sound that comes out of it sounds right on.

It also seems to be the most compatible Atari8 emu I've seen yet. It has run nearly everything that I've put in it yet. Including stuff that makes all the others choke. The only drawback seems to be that it is much slower (and therefore requires more computing horsepower) than the others. I will be registering it within a few days.

Comments from anyone who has?

I agree too. I was *really* sick and tired of sites for every other classic
computer that existed except the Ataris. Why is it that Atari people always
get the short end of the stick?

Yogi did an awesome job an an invaluable service to the Atari8 community.
Many old games that I owned were no longer readable, and the only way they
survive now is because of Yogi's archive.

Last time I saw the .DSK extension was a DiskComm file of a disk image.
You may remember DiskComm (Disk Communicator) by Bob Puff. There is a
text file that describes this format floating around, but I can't remember
where you would find it.

When Mike Hohman bought out the rights to the ICD 8-bit line, one of the first things he did was to put up the disk-based SpartaDOS as shareware. For a $19.95 registration, he would send you the full manual. But it seems he has disappeared with a few people's money.

His last released version was 3.2g, which I found to have one MAJOR bug which will trash a directory if you're not careful. 3.3a was Steve Carden's hack, which was supposed to have been written for BBS Express Pro, and included full Multiplexer support.

True, the copyright still exists on SpartaDOS, but I would advise NOT to send Mike Hohman any money, if and when he is found, until he makes good on all the orders he has received.

Actually .EXE is a more appropraite extension for most binary run files than .COM because they are in fact EXEcutables. The .COM extension originally was named so as to describe a particular kind of executable that is an external or supplimentary COMmand file (as opposed to on that is built into the kernal). These naming conventions were already well in place before the Atari even came out.

Of course, you could just type EDIT /78 {filename} to edit the file in
binsry mode.
I've used it from DOS in a quick pinch to edit some files.

You can replace the 78 with any number you choose (ie: use /64 to make 8 go
into it
evenly, good for editing word/long-word values,etc).

Believe it or not, Windows was originally written in Pascal. And up until Windows 3.11 for Workgroups PASCAL was still in the source code. In Win95 tho there is no more PASCAL language. Just support for it's data structures for older programs.

Well, it does cost more to write a sector and verify it (which is reading it back). So according to this reading a sector for verification only costs $5? Talk about markup! =)

>: the same time - they had two heads. same as disk drives in pc's or
st's.
You also can't format the back side in single-side mode on the XF551(to use on the single-sided drives), either, as that drive uses the index hole. But once it is formatted on the other drives, the 551 will write to it just fine. You just have to treat it like it was a 1050 or Indus GT and flip the disk.

>But the MyDOS documentation said that disks from one type of double sided
>drive wouldn't work with another.
True, because they all use their own different formats. Percom writes head 0, then head 1 before going to the next track, going inward, like Messy-DOS. The XF551 fills the first side from the outside in, then the second side from the inside out. This way, Atari reasoned, is that SSDD drives can at least access side 1 of the disk. The Astra DSDD drive is like the XF551, but either the last sector on side 1 or the first sector on side 2 (I can't remember which) is totally invisible to the computer on these drives, making it incompatible with the 551 in double-side mode.

And the double-sided Trak drive, the AT-D4, treats each side of the disk as
a different logical drive--i.e., if the Trak drive is the only one connected,
you can format one side of a floppy and address it as D1:, then format the
other side and address it as D2: without flipping the disk or anything.
Although the second side is probably not readable by anything other than
a Trak drive--you couldn't read it in a single-sided drive as a "flippy"
since the drive motor would be turning backwards! (Anybody know this for
sure? I'm just thinking aloud...)

> - Bob Stone

Well, first impressions are pretty good. Most games I have
tried to run have worked well (M.U.L.E. Rescue on Fract. Sea Dragon,
Archon, Spy hunter, Star Raiders, Wolfenstein). The only game I
couldn't get to work is operation blood (opblood.atr).

Sound seems quite good to me, the music at the start of M.U.L.E.
is not correct but the sound effects seem pretty close to the real
machine on all the games I have tried.

It certainly seems to be the best sound of all the emulators so far.
If you want to suggest some games to try out against my 800XL
let me know.

My only criticism is that it it is a bit slow. You can however skip
frames, but since I am running on a PPro 200 I don't really have a
problem with speed :-) (Chris Lam has said speed will improve).

Overall I would rate it as the best Emu around, Its not free
(but pretty cheap) and you do need win95/NT.

Rob.

>and flip the disk.

That's why I grab old ANTIC disks whenever I can find them. ANTIC disks
typically have double index holes. For a while, Dysan also sold disks
like that, but only in large orders. Some guys also went to the trouble
of punching the second holes in their disks. But formatting the second
sides of flippies on a 1050 always seemed the most practical way to go
about it.

They were all released except for maybe the "Futuremakers-Series".
Grog's Revenge was released by Sierra, although I am not sure if they
produced an Atari 8-bit version or not.

It's controlled by your Internet provider (in your case, the Universty of
Toronto.) Each news server has its own copy of all those thousands of
newsgroups (or as many as they choose to carry). You can find older
posts at http://www.dejanews.com .

I've been using the full Mac version for over a year and it's boffo! The
sound sounds like the real thing except for noise, which I guess is not so
easy to emulate (though I saw a post here by someone who claimed to have
figured it out, so that may change). It's well worth the modest shareware
fee. And it runs cart ROMs!

Thank you for your reply. I for one sure wish I could have written
something for the 8-BIT, anything at all. I did get around to writing
some BASIC stuff, but nothing like MyDOS. I Thank you for writing such
a great program, which I would be completely lost without. I know
there is SpartaDOS, but I feel much more comfortable with the usual
Atari DOS 2.0s conventions, which you have implemented well into
MyDOS.
It's great to know that at least one or two actual Authors are still
around to keep an eye on what is happening in the Atari world, and to
know how you feel about what is happening with your work.

If I had one wish, it would be that ATARI inc would make a comebak,
and show the world that ATARI really is- Power Without the Price!
Then Authors- like you- could really get into some serious
programming. Like maybe something that would overthrow Windows 95, or
outplay the "Playstation". If only I had one wish.......

I thought of that too. So I tried a "patched" version of 3.2d which
disabled Ultra-Speed, tried it on a real Atari and no probs, normal
I/O, but still it failed on XLit and PC Xformer. I don't know, it
seems to be doing something to the O.S. that the EMU's can't handle.
It's funny tho, SpartaDOS 3.3a with the normal I/O .DOS file installed
runs fine on the EMU's.

Just checked your score for DEFENDER. That was a "quick" game? at over
556,000 points WOW!! I was never that good. A friend of mine topped
over 1,000,000 points about 10 years ago, I can't remember the exact
amount. He was on the game day and night until that one day where he
could do no wrong! Sure wish I was that good, I'd give ya a run.......
Now Pole Position, I was good on that... I'll have to fire it up
again..

I know this is getting off the 8-BIT track, but it reminded me of a
program called FDFORMAT for the PC. It enables you to use the Double
Density disks (like the ones for the Atari), and format them to over
800k if you wanted too. Great for backing up when you run out of
1.44mb floppies. Of course you need to use a 1.2mb disk drive to be
able to use 80-83 tracks in double density mode. I used this quite a
bit, and only had problems with some of the older disks- I guess they
were just worn out. If anyones interested I can send FDFORMAT via
email.

1202. KYAN PASCAL QUESTION

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-04 00:00:00 UTC
From: ajbufort@red.seas.upenn.edu
Message-ID: <5d7mv1$51s@netnews.upenn.edu>
Source record: 76208

Ok, well, really TWO questions...

1) How does one make a binary load file from a KYAN program? I mean,
I assume you compile it with the PC command, and then one gets back
the files P.OUT and A.OUT. Then what? (I assume the next step
involves the AS command?)

2) Does anyone happen to have the DOCS to KYAN?

Thanks in advance,

Tony :)

1203. Ethernet card?

1204. Boulder Dash II Help Needed

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-04 00:00:00 UTC
From: Thomas Main <main@conrad.appstate.edu>
Message-ID: <Pine.PMDF.3.95.970204124245.677417916A-100000@conrad.appstate.edu>
Source record: 76210

I recently downloaded a copy of Boulderdash II and have been playing the first level. I have discovered how to "lead" the flashing squares and destroy them with boulders and the wall that turns some boulders into diamonds. The problem I have is that when I get to the exit door, I can't get in. Is there something I am missing? Any help would be greatly appreciated.

-Thomas

Hi Folks!

Ehhh.... perhaps one asked that already, but I like to know if there is a programm that is able to write the b-side of a disk in a XF551... with an inserted disk with side A UP! I guess that would be a solution too for our problems. The disk is "normal" inserted, but you simply write the backside....

I believe they are Disk Commed (written by Bob Puff) files. With Disk
Comm, you could turn a boot disk into a file and vice versa. I am
pretty sure Disk Comm 3.2 is on the archives, and I believe PC-Xformer
3.6 comes with it.

As usual, it's the middleman, in this case the SIO bus, that makes all the
money; the drive sees very little of the income.

I downloaded a copy of M.U.L.E. recently and tried to play w/o a manual.
I didn't get very far. Does anyone know of an on-line manual or help that
I could get for M.U.L.E.? Thanks.

>And anotherone shows a yellow one.

Before doing anything else, check your power supply. You should have a
clean 5 volts DC with no AC ripple. To check for the ripple, set the
meter on AC and check the voltage. If this reads any higher than 0.05, the
power supply is bad.

If the supply checks good, you most likely have one of the IC's has gone
bad, most likely either the OS ROM, one of the RAM chips, or one of the
74LS158's (or 74LS258, Atari used both and they're interchangeable).
Another possible culprit would be the MMU (C061618), which is a 20-pin
custom programmable array logic.

Hope this helps.

1210. AR: The City

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-04 00:00:00 UTC
From: Falcon <wfalcon@uofrlaw.urich.edu>
Message-ID: <32F79F69.5928@uofrlaw.urich.edu>
Source record: 76216

Having recently discovered Alternate Reality: The City for my 8 bit, I'm having serious problems staying alive. Basically, my character walks around, gets into a few fights, and then is slaughtered by a worthier opponent. Can anyone give me some suggestions on how to protect a weak character (good strategy for getting started?)?

Falcon

: Actually .EXE is a more appropraite extension for most binary run
: files than .COM because they are in fact EXEcutables. The .COM
: extension originally was named so as to describe a particular kind of
: executable that is an external or supplimentary COMmand file (as
: opposed to on that is built into the kernal). These naming
: conventions were already well in place before the Atari even came out.

uh,Atari DOS doesn't really have a binary extension.Manuals usually
listed "OBJ" as a extension.AUTORUN.SYS is the only magic filename.
(and RAMDISK.SYS on DOS 2.5)
DOS XL and SpartaDOS use "COM" as a extension.
DOS 3 use CMD as a extension for "external add-on commands";it has no
binary extension as per DOS 2.
No DOS uses EXE,to my knowledge.
SpartaDOS X has a new binary file format but it still uses the COM extension.

: If there is no further interest, I will not bore you any longer, but I
: thougt, it could be ...

You know I was thinking about that 256-byte sector limitation of the Atari
DOSes and it seems to me that you could implement a "multi-sector read"
and "multiple sector write" command.That would get past the slowness of
256-byte sector access without making DOSes use 512-byte file buffers.
Of course only SpartaDOS keeps lists of sectors("sectormaps") so only
SpartaDOS could read in more than one sector at a time.
(AtariDOS and MyDOS only know the location of the current and next sector)
Of course Atari/MyDOS directories are always stored on sequential sectors,
so directory reads would be fast if a programme read the whole directory
at once.

This would also help out disk drives with track buffers since the whole
track could be sent in one frame.
```

And it would still work when 1024-byte sector hard drives come out.

: Unfortunately that's not possible; the structure of an MS-DOS .COM file
: is... well, it doesn't HAVE any. It's just raw code. The only thing to do
: is use all .EXEs, and avoid .COMs -- which is the way things have been
: moving for a long time. (Probably the only real .COM file most people use
: regularly is COMMAND.COM. Some of the MS-DOS system files are really
: .EXEs, named with .COM extentions.)

I already know all that.Actually,sometimes EXE files are inside COM files.
EXE files start with "MZ".NDOS.COM is really a EXE file.
I'm not sure about puting COM files in EXE files.I renamed some random
file to EXE and DOS crashed.I don't think that MS-DOS actually pay any
attention to the extension.
(the MS-DOS programming manual makes no mention of extentions meaning
anything)
I think that MS-DOS just checks for "MZ" and if it's missing,assumes a COM
file.

Try re-naming a COm files to EXE and vice versa.I don't have a PC to test on.

Well,there's a command under Linux called "file" that work's like Atari's
WHATIS.It can idenity COM files by checking if the first byte/word is a
proper op-code/instruction.MS-DOS could do that.
Better yet,MS-DOS could simply provide a signal/interupt/exception handler
for "ilegal instructions" like it does for "stack overflow".

I'm no virus expert, but... A floppy-based computer, such as the Atari
8-bit, would seem to be rather immune to such things--at least the kind
that are self-replicating and spread throughout a system. I think you need
a hard drive-based system for that kind of thing to cause any real damage.
A "trojan horse", maybe. Something disguised as a disk utility for
instance. But, other than idle curoisity, why would anyone want to do it?
Long-standing grudge against Nolan Bushnell? A bitter, mentally-unbalanced
former TI99/4a user seeking revenge against the few remaining users of a
more popular home computer system? ;)

Don't know how the PC version compares to the Mac version, but I get the following informal results with v1.3 while running the Defender cart ROM in 400/800 mode with the speed cap off on a 66 mhz PowerMac 7100 (with about eight other apps running, including Netscape, during a TCP/IP dialup session):

```
Frame rate ave. fps ave. speed
-----------------------------------
Normal: 10 130%
Even more: 17 90%
Every: 26 40%
```

True. What could it do? Unless the virus writers found a magical new
series of opcodes which could fry the hardware, the worst they could do
is format the floppy disk and perhaps floppies which may be in D2:, D3:,
and so on.

It's the lack of automatic replication that would doom any viruses on
floppy-based systems to a very short life.

COMMAND.COM is an EXE format executable too :-)

Real com files contain no relocation information, so that are generally
only useful for very small asm programs.

Here's the idea I had for an Atari 8-bit virus, back when I used to
think of such things:

What about a virus which, when run, appended itself to any copy of DOS
it found on the disk? If the user then booted from that disk and
formatted new ones, wrote DOS files etc. the virus would be copied to
other disks, and so on, and so on...

>>
>>You're right, the Jaguar was hastily produced, and some of the games
>>were rather... well, SNES-like... However, it *was* a 64-bit machine.

The bitness of a machine depends on what definition you use.
I'd be inclined to call the Jaguar a 64 bit games system, but I wouldn't
call a normal computer based on the same chips anything but 32 bit.

>>The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors,
>>three of which are more or less completely dedicated to graphics, but
>>could probably be used for processing as well, and one 32-bit RISC

>
>You both got it wrong.

And so did you, but you were rather close. ;-)

>The Jag has a MC68000 and two identical 32-bit RISC processors (one of

They're not identical, but very similar.
They both have some instructions that the other doesn't.
Also, the 'DSP' has more local memory and according to some people a
16 bit wide bus (I'm not quite sure about that).

>which was intended to handle sound processing). It also has a couple
>coprocessors to accelerate things like blitting, sprites, etc. The 64-bit
>element in the whole affair was the memory bus connecting the various
>processing elements and the 2MB DRAM memory together.

It's not only the bus that's 64 bit. Both the object processor (a sort of complicated sprite engine) and the blitter can operate on 64 bit values. Those two are in no way RISC processors, though, as some people have claimed. One of the RISCs can read (and write IIRC) 64 bits of data with one instruction as well.

>Does it really matter that none of the processors in the machine cannot >handle 64-bit instructions? No. The only reason the N64 to has a 64-bit >CPU is that SGI designed the thing, and they're partial to the 64-bit MIPS

Quite right. Most of the instructions for the Jaguar RISCs are actually 16 bit, though, even if they do operate on 32 bit values. Naturally, the instruction size has little to do with anything.

>There were clear benefits for game consoles to move from 8 to 16 to 32 bit >CPUs. These jumps allowed larger address spaces and quicker computation >(because 16 and 32 bit calculations are very useful). But 32-bit address >spaces are overkill for games in the immediate future, and 32-bit numbers >have a large enough range that you don't really need more except in very >rare cases.

Quite right again. There _are_ cases when you can profit from 64 bit wide operations, though, but I'd be very surprised if they were very common for game console code.

Source record: 76091

The XF551 can be made to read/write to the back side of the disk but you need to modify the disk rather than the drive.

The disk has a small hole, that needs to be installed on the disk but on the other side in the same place. Turn the disk so that the hole that is in the disk lines up with the hole in the jacket. Take a Leather punch or simular type punch and punch a hole in the disk directely oposite and when you insert the disk the drive will be able to write to it and read it back.

>i mean the xl-opcodes (inkl. illegal ones...)

The 6502c IS the 6502 processor. There are no extended opcodes, and I do not know of any "illegal" ones that work. (Someone PLEASE correct me if I'm wrong!) The letter at the end is the speed class. Of all the Atari 8-bit lines, only the old 400/800 used the true 6502 CPU. Its inherent problem is that it cannot "float the bus" (that is, isolate itself from the data/address lines). The XL/XE (and the last 800's as well, I believe) use a MODIFIED version of the 6502 which CAN float its bus. Apart from that, all the opcodes are exactly the same as for the 6502/6507/6510.

The 65c02, on the other hand, is CMOS (very low power consumption). Harris and Rockwell each came out with different versions of it, and even some of the extended opcodes are different!

Your safest bet is to stick with the standard 6502 instruction set.

Reset the Resetvector pointer. I no longer have my Mapping the Atari, but I believe the locations are 12 & 13 on Page Zero. You also need to make sure location 580 is set to zero, otherwise the OS will perform a coldstart when reset is pressed. As I recall, your ml routine must then JSR to the *old* value of locations 12 & 13 to initialize the DOS, otherwise, you will lose the "D:" device, because the device handler table is reinitialized by the OS after the
pressing reset. Reset generates an interrupt and the OS jumps to whatever location is specified by the resetvector.

Explanatory note regarding financial results included herein

On July 30, 1996, Atari Corporation ("Atari") was merged with and into JTS Corporation ("JTS") and the separate existence of Atari ceased. Although the business combination resulted in Atari merging into the JTS legal entity, the substance of the transaction was that Atari, as a public company with substantially greater operating history and net worth owns approximately 62% of the equity of the merged company. At July 30, 1996 the acquisition was accounted for as a purchase of JTS by Atari and accordingly, the operating results of JTS for the periods subsequent to July 30, 1996 will be combined with the operating results of Atari and reported as JTS. While the financial reports included herein are those of JTS, the financial results represent those of Atari, the predecessor entity, as of June 30, 1996 and 1995 and for the three and six months periods ended June 30, 1996 and 1995. See Note 4.

JTS CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1. BASIS OF PRESENTATION

The condensed financial statements included herein have been prepared
by the
Company, without audit, pursuant to the rules and regulations of the
Securities
and Exchange Commission. Certain information and footnote disclosures

normally
included in financial statements prepared in accordance with generally
accepted
accounting principles have been condensed or omitted pursuant to such
rules and
regulations. However, the Company believes that the disclosures are
adequate to
make the information presented not misleading. It is suggested that
these
condensed financial statements be read in conjunction with the
financial
statements and notes thereto included in the Company's 1995 Annual
Report on
Form 10-K, filed with the Securities and Exchange Commission.

The unaudited condensed financial statements included herein reflect
all
adjustments (which include only normal, recurring adjustments), which
are, in
the opinion of management, necessary to state fairly the results for
the periods
presented. The results for such periods are not necessarily indicative
of the
results to be expected for the full fiscal year.

The Company operates with a 52/53 week fiscal calendar. Both quarters
covered by
this report have 13 weeks and for simplicity of presentation, the
calendar
quarter date is used to represent the quarter end. The actual fiscal
closing
date for the second quarter of 1996 and 1995 was June 29, and July 1,
respectively.

NOTE 2. INVENTORIES

Inventories consist of the following (in thousands):

June 30,
December 31,
1996
1995

Finished goods $ 4,300
$ 9,927
Raw materials and work-in-process 298
1,007

Total $ 4,598 $
10,934

=======
=========

NOTE 3. REPURCHASE OF 5 1/4% SUBORDINATED CONVERTIBLE DEBENTURES

In the first quarter of 1995, the Company repurchased a portion of its 5 1/4%
subordinated convertible debentures. The Company repurchased 100 bonds at face
value of $1,000 each, and recorded an extraordinary credit of $47,250.

7
9
NOTE 4. MERGER WITH JTS CORPORATION ("JTS")

On July 30, 1996, Atari was merged with and into JTS and the separate existence
of Atari ceased. Although the business combination will result in Atari merging
into the JTS legal entity, the substance of the transaction is that Atari, as a
public company with substantially greater operating history and net worth owns
approximately 62% of the equity of the merged company. The $25 million loan
Atari had made to JTS in February was increased to $30 million in early July,
and upon consummation of the merger the loan was cancelled. The acquisition will
be accounted for as a purchase of JTS by Atari and accordingly, the operating
results of JTS from July 30, 1996, the date of the merger forward will be
combined with Atari's operating results and reported as JTS. The aggregate
purchase price of $112.3 million has been preliminarily allocated to the
acquired assets and liabilities of JTS. The fair value of the JTS assets and
liabilities will be revised when complete and final information becomes
available regarding liabilities assumed and direct transaction costs and the
receipt of a final allocation report. Management believes the final allocation
of the purchase price will not be materially different from the preliminary
allocation. The preliminary allocation resulted in $151 million allocated to
purchased technology, $112 million of which represented in-process research and

development. The $112 million will be expensed in Atari's July
operations as the
technology had not yet reached technological feasibility and does not
have
alternative future uses.

The net assets acquired were preliminarily allocated as follows:
(in thousands)

Inventory, trade accounts receivables and other current assets $
24,989
Equipment and tooling
19,469
In-process technology
112,357
Existing technology
25,812
Goodwill
13,666
Liabilities assumed
(84,000)

Net assets acquired
$112,293

The following unaudited profoma information shows the results of
operations for
the six months ended June 30, 1996 and 1995 as if the JTS acquisition
had
occurred at the beginning of each period presented and at the purchase
price
established on July 30, 1996. The results are not necessarily
indicative of what
would have occurred had the acquisition actually been made at the
beginning of
each of the respective periods presented or of future operations of
the combined
companies. The proforma results for 1996 combine Atari's results for
the six
month period ended June 30, 1996 with the results of JTS for the six
month
period ended July 28, 1996. The proforma results for 1995 combine
Atari's
results for the six month period ended June 30, 1995 with JTS' six
month fiscal
period (26 weeks) ended July 30, 1995. The following unaudited
proforma results
include the straight-line amortization of intangibles over periods
ranging from
three years to seven years.

(in thousands)	1996	1995
Revenue	$36,076	$13,294

Weighted average common and common equivalent shares outstanding	103,305	83,286

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE SECOND QUARTER OF 1996
COMPARED TO THE SECOND QUARTER OF 1995

This Quarterly Report on Form 10Q contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Actual results could differ materially from those projected in the forward-looking statements as a result of the risk related factors set forth herein, and in the JTS Registation Statement on Form S-4 declaring effective by the Securities Exchange Commisson on July 12, 1996.

On July 30, 1996, Atari was merged with and into JTS, and each outstanding share of Atari Common Stock was exchanged and converted into one share of JTS Common Stock. JTS was incorporated in February 1994 to develop, market and manufacture hard disk drives. The Merger was approved by the stockholders of Atari and JTS and finalized in Shareholder Meetings on July 30, 1996.

In 1995, Atari recognized that despite the significant commitment of financial resources that were devoted to the Jaguar and related products, it was unlikely that the Jaguar would ever become a broadly accepted video game console or that Jaguar technology would be broadly adopted by software title developers. As a result, Atari decided to significantly downsize its Jaguar operations. This downsizing resulted in significant reductions in Atari's work force, and significant curtailment of research and development and sales and marketing activities for the Jaguar and related products. Accordingly, Atari decided to

focus its efforts on selling its inventory of Jaguar and related products and to emphasize its existing licensing and development activities related to multimedia entertainment software for various platforms.

Net sales for the second quarter 1996 were $1.0 million compared to $3.0 million for the second quarter 1995, a reduction of $2.0 million. Sales of Jaguar and related products represented 65% and 70% of total revenues for 1996 and 1995, respectively, and sales of other products and royalties represented the balance of revenues in each such year. The reduction in revenues was primarily the result of lower unit volumes of Jaguar products and lower average selling prices of Jaguar and certain of its software titles. As a result of the Jaguar price reductions and the substantial curtailment of sales and marketing activities for Jaguar, Atari expects sales of Jaguar and related products to decline substantially in 1996 and thereafter.

Cost of sales revenues for the second quarter of 1996 were $.9 million compared to $2.0 million for 1995. The substantial decline was due to the reduction of revenues.

Despite the introduction of four additional game titles in the first quarter of 1996, interactive multimedia entertainment market sales have not rebounded due to uncertainty about Atari's commitment to the Jaguar platform, increased price competition and pending competitive product introductions. The Company is pursuing alternative sales channels and licensing opportunities. Atari expects the market to remain highly competitive throughout the year.

Research and development expenses were $.1 million for the second quarter of 1996 compared to $1.8 million for the second quarter of 1995. The substantial decline is due to the elimination of the Company's internal Jaguar development team and other development staff in the fourth quarter 1995. As of June 30, 1996, the Company had capitalized $.9 million of development cost

associated
with certain CD titles.

9
11
Marketing and distribution expenses were $0.2 million for the second quarter
1996 as compared to $2.6 million for the second quarter of 1995. The reduction
was due to the curtailment of marketing activities for the Jaguar.

General and administrative expenses for the second quarter of 1996, were $0.7
million compared to $1.6 million for the same period in 1995. The decrease in
such expenses was primarily the result of staff reductions, reduced rent, and
other reductions in operating costs.

Other Income (Expense), net for the second quarter of 1996 was $0.1 compared to
$0.6 million for the second quarter of 1995. In the second quarter of 1995, the
company sold a portion of its common stock holdings in Dixon PLC, a United
Kingdom retailer, and realized a gain of approximately $0.5 million.

Interest income for the second quarter of 1996 was $0.3 million compared to $0.9
million for the second quarter of 1995, reflecting the Company's significantly
lower cash balances during the second quarter of 1996. Interest expenses for the
1996 and 1995 quarters were $0.6 million which represents interest due on the
Company's 5 1/4% Convertible Subordinated Debentures. In April 1996, the Company
made an annual payment of interest on its bonds that totaled $2.2 million.

10
12
MANAGEMENT DISCUSSION ANALYSIS FOR THE FIRST SIX MONTHS 1996 AS COMPARED TO THE
FIRST SIX MONTHS FOR 1995

Net sales for the first six months ended 1996 were $2.3 million as compared to
$7.8 million for the same period of 1995. Sales of Jaguar and related products
represented 52% of sales for 1996 and 72% for 1995, and sales of other products

and royalties represented the balance of revenues in each such year. The
reduction in revenues was primarily the result of lower unit volumes of Jaguar
products and lower average selling prices of Jaguar and certain of its software
titles. As a result of the Jaguar price reductions and substantial curtailment
of sales and marketing activities for Jaguar. Atari expects sales of Jaguar and
related products to decline substantially in 1996 and thereafter.

Cost of sales for the first six months of 1996 were $7.1 million. Included in
cost of sales in 1996 were inventory write-downs of $5.0 million relating to
Jaguar products. These write-downs resulted from management's revised estimates
of sales resulting from continued disappointing sales of Jaguar.

Research and development expenses for the first six months were $0.3 million as
compared to $3.6 million for the 1995 period. The substantial decline is due to
the elimination of the Company's internal Jaguar development team and other
development staff in the fourth quarter 1995. As of June 30, 1996 the Company
had capitalized $0.9 million of development costs associated with certain CD
titles.

Marketing and distribution expenses were $1.0 million for the first six months
of 1996 as compared to $5.2 million for the 1995 period. The reduction was due
to the curtailment of marketing activities for the Jaguar.

General and administrative expenses for the first six months of 1996 were $2.0
million as compared to $3.4 million for 1995. The decrease in such expenses was
primarily the result of staff reductions, reduced rent, and other reductions in
operating costs. The Company maintains operations in Sunnyvale, California and
Slough in the United Kingdom.

Other Income (Expense), net for the six months ended 1996 was $6.8 million as
compared to $1.0 million in 1995. For 1996, the company sold the remaining

portion of its holdings in Dixon PLC., a retailer in England and realized a gain
of $6.3 million.

Interest income for 1996 was $0.7 million as compared to $1.8 million for 1995.
The decrease in interest income is attributable to significantly lower cash
balances during the first half of 1996 as compared to 1995.

Interest expense for the first six months of both periods was $1.2 million and
is a result of the Company's 5 1/4% Convertible Subordinated Debentures.

LIQUIDITY AND CAPITAL RESOURCES

As of June 30, 1996 , the Company had cash and marketable securities balances
totaling $21.2 million compared to $50.6 million as of December 31, 1995 for a
reduction of $29.4 million.

In February 1996, Atari loaned $25.0 million to JTS in connection with the
Merger and in July the loaned amount was increased to $30.0 million. Upon
comsummation of the merger the loan was cancelled.

For the first six months of 1996, the Company used $4.0 million in operating
activities.

PART II

At least LAX (=LDA+LDX) works. I also figured out a few other
undocumented instructions (with more or less sense).

> Your safest bet is to stick with the standard 6502 instruction set.
Yes, that makes life easier for emulators ;-)

1247. How to convert .DCM files

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-05 00:00:00 UTC
From: ivan@rcp.co.uk
Message-ID: <32fa4bf6.1211522897@news.rmplc.co.uk>
Source record: 76146

I have had many enquires about how to convert .DCM disk images to be able to use them. There is a PC MSDOS utility called DCMTODSK which will convert .DCM images to .ATR images so they can be used with either an emulator or a Sio2pc cable.

DCMTODSK is now available from my utilities web page:
http://dales.rmplc.co.uk/ivan/atari/

Coming soon to my web page is a section on how to run atari executables (.EXE, .OBJ, .BIN) on an emulator. (as I get many emails regarding this too)

Ivan

.....all I need is a good 'beginner's introduction' or something else....

Your best bet is to save the game every time you win an encounter,
then back up your coverdisk (without overwriting the previous character
backup). This way, if anything untowards happens (such as dying :)) then
it`s relatively simple to restore the character, without having to restart
completely. Other than that, it`s pretty much trial and error. And die.
And restart. And die. And find something cool and promptly die. You get
the point :)
I found that if, when my character was generated, I waited until
his (her?) intelligence was high (21), then just tricked all my enemies.
Doesn`t always work, especially on things like master thievs, and the
like!
Look out for a TREASURE FINDING! potion (Red and sweet, if my
memory serves me correctly....?), and wait around until night time - the
best monsters appear then, like trolls (usu. loads of weapons) and dwarves
(gems, etc.). Slime often has good stuff, but is a pig to kill. Oh, and
finally....beware the Nightstalker.....you have been warned!!!

Good luck - you`ll be able to call yourself a veteran in, ooh, say
two years (real time!) :)

Big Bro`

Pastfinder is an AWESOME game! That and Spelunker are the 2 games
that I still consistently go back to.

OK, here's the scoop:

Deradiator: wipes all of your radiation from your robot
Heavy Metal: provides a radiation shield so you absorb radiation a
lot slower. Use it on the red areas where the radiation is
the highest. Lasts several rounds (if you don't die & lose it).
Beam Shield: you don't die from the enemy saucer shooting you
Scrambler: the enemy saucer won't track you--it will fall straight down
the screen instead of homing in on you

The point is to pick up artifacts and deliver them. The artifacts are
the little discs (1 artifact) or 3-d boxes (5 artifacts). Run over them
to pick them up and go to the areas on the map that have a square on them.
These are the delivery stations. For every artifact delivered, you get
a bonus goodie--there are 2 types of stations (different symbols on the
map) that give you 2 different goodies. One gives you a second of
radiation immunity for each artifact delivered, the other gives you a
second of enemy saucer non-presence for each artifact delivered.

There is no end to the game. You keep exploring new territory, until you
get to the top of the map, where it's a _real bitch_ to just stay alive
and deal w/ the terrain obstacles, let alone the radiation and incessant
saucers. If you make it to the very top, you start back down @ the bottom
again, like usual, and keep going.

Some strategies I've picked up are to avoid going over the same area
twice, b/c there are no enemies and no floating crystals to shoot to
keep your radiation down.

The 2 pairs of arrows on the map screen point to squares that hold
free guys somewhere in the area. Run over them to get them.

That's about it off the top of my head--I can answer more questions.
I'm your Pastfinder man!

-Jason

Maybe they are Apple II disk images. The .dsk extension is standard
for such disk images used by emulators. What is the byte size? If it
is 143360 it could be an Apple II image.

Bob Puff (CSS) has an XF551 upgrade that WILL allow you to format
flippy disks. I had one and it worked great. I also built a switch for
the XF551 that would all you to have full write, normal and full
protect modes. I can dig up the schematic for it. I had 1 IC and a DPDT
switch w/ center off. That worked really well too.

Matt,
To my knowledge, nothing like that has ever been interfaced to the 8-bit. I suppose it could be done, but would take some re-engineering not to mention software to run it.

The XF551 is designed to write in true double sided format. I can't
do reverse write on the B side. Just remember, when you make a flippy
disk, it is spinning in the opposite direction from side A. For double
sided disks the disk is not flpiied and you have 2 heads writing at the
same time. One on one side on one on the other. This is where the
Flippies become incompatible with the XF551 in normal mode. If I
remember correctly, there was a drive (Rana?) that did format the B
side in reverse format and therfore was compatible with the flippy
set-up.

You can connect them together, but they probably wouldn't work
right.....VGA monitors are RGB (separate colour lines), not composite
(colour signals combined into one line), which the Atari is designed
to output. I'm sure you could make a circuit to convert the signals
from composite to RGB, but it might not be practical.

I don't think a multisync monitor will work. The Atari computers were
designed for an NTSC composite monitor.

But as I recall, you are confusing the 65C02 and the 6502c.
I believe the former is the processor with the added instructions
while I believe the latter is a version Atari used which had
some electronics integrated into it to make it live with ANTIC
usurping it more easily.

But I agree with you on the idea of the 65C02. As far as I know,
I don't think there was a way to determine if you were running
on the enhanced processor or the original. And it came out after
many had the original, so I don't believe it caught on.

Right with this to add... they are all composite but they all also
have a composite seperated chroma-luma (except for the 800XL). Atari
didn't quite impliment the chroma-luma on the 800XL for some reason.
I modified mine once and if I remember correctly it just required
hooking up 1 or 2 of the pins on the monitor jack and putting a
capacitor in line or something. Hard to remember that.

Cheers,

Jon

I only have 1.5 kByte room for the whole code.
Second point is that you have to rewrite DOS, no matter which way you go. And then a 512 byte implementation would speed up the system much more than multiple sector reads.
> (AtariDOS and MyDOS only know the location of the current and next sector)
> Of course Atari/MyDOS directories are always stored on sequential sectors,

> This would also help out disk drives with track buffers since the whole
> track could be sent in one frame.So you have to reprogram all floppy drives.
> And it would still work when 1024-byte sector hard drives come out.This would be the smallest problem. Still all harddisks have 512 bytes/sektor and I canï¿½t imagine, that one really need one bigger than 100 MB.
Look: Our Interface supports up to 240 partitions.
If you let them all emulate Enhanced density disks, youï¿½ll need:
1040 sec X 256 bytes (single density disks will also need the space of 256 bytes per sector) X 240 partitions = ca. 61 MB.
So do 2-3 16 meg partitions for working with and you have 100 MB.
And to store files (f.e. a games collection) youï¿½ll better use CD-ROM.

Matt

The were only two network implementations ever released for the Atari 8bit computers systems:

1. The Corvus Constellation. A 10MB or 20MB hard drive system would be connected to an 8 port multiplexer which in turn could be connected to 8 additional multiplexers for a total of 64 connections. These multiplexers would have a small connection box plugged into them that would be plugged on the other side to joystick ports 3 & 4 of the Atari 800 computers. With the discontinuation of the 400/800 line of computers Corvus Systems, Inc cancelled further development/sales of their Corvus Atari interface.

2. CSS Multiplexer. Creative Software Solutions (Now New Age Electronics) sells (yes, they still sell) The "Multiplexer" a series of interfaces which plug into the cartridge port and allow additional cartridges to be plug onto of the them. 1 interface is the Master which you plug into your "SERVER" which you would want to be an Atari system with preferrable a hard drive or a set of multiple large capacity disk drives and a printer. The other modules are the SLAVE modules which you can have up to 8 of. These will allow you to boot from the MASTER system and use its hard/floppy disks and printer. Bob Puff was working on a multi-user BBS system, I don't know if it ever became commercially available. the tele# of CSS is 716-586-5545
His BBS line is: 716-247-7157

Source record: 75977

Actually the 1450XLD disks don't work like that, they treat each disk as a seperate sides, both sides aren't read/write to at the same time. The drives are EXTREMELY fast, however the whole system is VERY flaky, but very cool.

On nice feature of the 1450XLD drives is that they are drives D1: and D2:, any drives connected to the SIO chain are automatically assigned drive #'s 2 drives higher

ie. You have 2 drives installed inside of the 1450XLD, then you plug a 1050 onto the SIO chain as drive D1:, it automatically becomes drive D3:

The other nice feature of the 1450XLD is that upon turning the system on, a blue screen comes up with a message:

Insert Disk Into Drive and press RETURN

Some NEC and Mitsubishi multisync monitors (and maybe others?) made in the
early days of the VGA standard DO have composite input, but the NEC 3D
is not one of them.

An old issue of Atari Classics (same issue with the Supervideo 2.1 upgrade
in it, I think) had an article about a Mitsubishi monitor that would
take both composite and VGA signals, with a picture of the author's PC and
130XE sharing a monitor.

MacBinary is a format developed to ensure Mac binary files survive intact over modems and foreign network connections. Mac files differ from other platforms' files in that they have two parts--a resource fork and a data fork. (The resource fork contains things like icons.) But if a Mac file is sent via modem, for instance, only the data fork is sent. MacBinary combines both parts into a file with only a data fork. When a remote Mac receives the file, it is restored to the two-part structure. A non-Mac system will usually not be able to use a file in MacBinary format without some kind of translation. Most likely the "un-useable" GIF files you mention are in MacBinary format and therefore contain extra data (probably an icon) not part of the GIF format. If Mac-generated GIFs really were unusable by non-Mac systems, 80% of the graphics on the web would not be visible to your PC's browser.

I have no idea who he is.

All the information I ever saw from people who actually programmed the
thing was that the CPU registers of the two RISC main processors were 32
bits wide. I recall one of them saying there was a 64-bit data move
instruction to utilize the full width of the memory bus. The blitter also
did 64-bit bus transactions, for obvious reasons.

You missed the real point of my post: that it just doesn't matter that the
processors in the Jaguar were not 64-bit. 32-bit is plenty for games.
The game ads screaming that 64 is twice as good as 32 are BS. There isn't
even a tremendous need for true 64-bit processors on the desktop, let
alone game machines.

On a 7500 with a 150 MHz 604 card installed, Rainbow always runs at 60 fps
on the "Every" frame setting. Unfortunately, the blitting routines for
the 1.5x and 2x screen sizes don't appear to be well-optimized, so it
drops a bit if I go to those modes. Also, the speed cap seems to cause
some sound problems (momentary interruptions in the output). It's my
guess that these things are really artifacts of Chris not having a fast
machine to test on. :)

You mean like a C> prompt on the emulator's display? Ugh. Anyway, I think
(don't know) that there are limits to the size of a disk volume and number
of files that the Atari OS can handle--probably way less than a typical
hard drive nowadays. Unless you're talking about modifying the OS or the
"hardware". But then you'd be emulating something that never existed.
(Confused? Me too!)

> Along with that offering
> normal use of all of the IBM's peripherals, ie: Printer, Modem, CD-ROM
> drive etc?

I suggested to Chris Lam (author of Rainbow) some time ago that calls to
printing devices from within the emulator be somehow passed on to the host
operating system--essentially emulating say an Epson dot matrix printer
using whatever is hooked up. Or allow the emulator access to the modem
port, somehow making it look like an R: device. He didn't seem to think
there was much point to it. And I couldn't come up with one. People mainly
want to run games. But still...

> This would be a MAJOR step forward in the emulator scene and would entice

> 8-bit CD-Roms could be put to REAL use!

Maybe it would be possible to emulate SIO2PC or APE using an emulator and
a PC...The emulator would completely take over the system! :-)

While we're on the subject of emulator fantasies, here's mine. An Atari
emulator that's an OpenDoc part which could be dropped into a CyberDog
document. Link to Jellystone Park and run games right over the WWW! <sigh>
Unfortunately, the way things are going, I'm may be running my *Mac*
software on an emulator before that happens...

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-06 00:00:00 UTC
From: BobKlaas <bobkla19@tcd.net>
Message-ID: <32FAC733.D64@tcd.net>
Source record: 75989

So your up and running again..if you have a "Hayes" modem the most you
can expect from you board is 19.2. If you at the presant state go
higher you overun the 8-bit buffers!.So it is not possible to go higer!

bob

```

```
absolutely.
and it doesn't have 64-bit instructions. well, the GPU can access the bus
64 bits wide if it wants, but this doesn't make a "64-bit instruction".
and if we're talking about the actual size of the instructions, those are
all 16 bits wide. all cpu-registers (gpu/dsp) are 32 bits wide.

Like the other posts said here a few days ago, SAVE SAVE and SAVE your character very often (after each fight) Also make a backup copy of your character disk. (I know its a pain in the butt) but it is the only way you will increase your character)

Whilst reading the usual rubbish I find here, Jon D. Melbo wrote something
interesting to All about REGARDING "DOES ANYONE RECOGNIZE THIS"...:

Hello Jon,

JDM> If that's true then Mac GIF files are not really true GIFs. There is a
JDM> spec out for the construction/format of a GIF file, and if the Apple
JDM> weenies deviate from it then let em be on their own I say.

Yeah, that's all well and good *but* when they post three of these "gifs" to
ng's where the bulk of users probably /aren't/ using Mac's, they're really
asking for trouble.

By that, I don't mean to imply the original poster was being malicious, far
from it: His subsequent apology was more than adequate. IOW, he learnt from
his mistake. It's a pity that many (throughout usenet) don't. :-(

Hey all

Has anyone any experience of using an Iomega Zip drive with a SCSI-equipped Atari 8-bit? I read somewhere that Sparta supports this drive without patches or driver software. If that's true, it seems like an awful cheap way to tap into hundreds of megs of *very* cheap yet fast (when compared to some other Classic drives) storage!

If you've tried this set up,c an you share your knowledge? What SCSI host adaptor are you using? DOS? Driver software?

-> How do I program the SYSTEM RESET key to jump to the beginning of
my
-> machine language routine instead of having it do something else,
like
-> reboot the system or something?
-

In Assembler:

initialize your program to store #$00 in $244
store lo byte of address you want to run in $0A AND $0C
store hi byte in $0B and $0D
That way if something has messed with the CASBOOT flag it will vector
through BOTH possibilities.
If you want it to reboot, store $E477
OR store any non zero in $244
Also, as noted in previous reply, vector through the original dosvec
(which you'll have to save somewhere) if you want D: to work.

(Bob Klass, I'm going to put a part just for you at the end
of this pre-written followup.)
(Question about how to run a file compiled with Kyan
Pascal's 'pc' command.)
(I forgot upenn guy's name.)
Alrighty, You have to have the LIB file on the disk you're
running the file from. Kyan isn't able to make 'stand alone'
programs, you have to have this LIB file, and I think you
have to be in the 'KIX' environment (with the % prompt).
Kyan didn't include a Runtime to make their programs 'stand
alone.' But you asked how to 'L'oad it. Just specify a.out
at the % prompt. Or, D2:A.OUT if on drive 2. Kyan is
annoying, best get CLSN Pascal from B & C, if they have any
more. You need 128k to program in CLSN Pascal, but I think
the .obj files stand alone and don't require 128k.
It took me several hours to figure this out, and I hate to
admit I have the 200 or so page book. I spent all that time
copying and trying and failing and certainly reading the
book as little as possible. Uhm. I probably don't wanna sell
it (book and original disk.) Thanks.
I was really upset when I first bought ACTION! and I
couldn't make stand alones. Then came the 'pd' runtimes,
etc, etc.
If you name your source file with just a .P extender? You'll
get a file with the same name as the source, but without the
.P extender. A.OUT is if you've used something other than .P
for an extender.
(Now for Bob K.)
:) :) :)
The technical support number is 415-626-2080, in San Francisco.
If you want to write them. The address is:
Kyan Software Inc.
1850 Union Street #183

I am looking for a disk based version of the Atari Light Pen Cart.

Have tryed writing LOTSABYTES for a new catalog but, no answer..
to get the disket base version. If someone could tell me where I
could buy this I'll pay a decent price..for the the disk. Also,
if anybody can tell me how to get ICET 2.71 to dump to a Epson
printer..that would be nice. ICET 2.6 does it fine. Oh, one
other thing..seems Ben Pol? or somebody had parted with XF551
3.5 up-grades. People, I mean any real 8-bit users know just
how valuable this was..over here in Cleveland, we could use the
boost of a few XF551's for CACUG 8-bit club..if you want to send
them along to us for a decent price let me know so I can pass the
word to Part-Time BBS.

And yes, we can access you via Email and on WEB SITEs..with the 8-bit
ha ha so there!

Tony,
What you need to do is compile with this command:

PC>Dx:ProgramName-L-E-O <RETURN>

Where x is the drive number. "-L" tells the computer whether you want
an assembly listing. "-L" will send it to the screen, "-LP" will send it
to the screen and printer. "-O" allows you to not generate an object
file. "-O" will not generate an object file, "-O filename" will name the
object file to whatever filename is. "-E" tells the computer where you
want the list of errors to be sent. "-E" will send it to the screen,
"-EP" will send it to booth the screen and printer.

Straight from the manual:

A system file is also a stand-alone file in that a compiled and
assembled PASCAL program can be run without using the Kyan PASCAL disk.
There is one important precaution: [Apple][stuff snipped) If you have
an Atrai, "LIB" must be in the same directory as the file you are going
to run.

Nowhere in my book does it mention the AS command. I have version 1.3 of
Kyan PASCAL. I should be able to do a quick and dirty web page Thursday
evening with a list of Editor Commands and Compiler/Assembler Commands.
Check out:

http://w3.one.net/~ryanr/kyan.html

sometime after Thursday evening. I can then add different sections as
time permits. I type REAL slow and don't have access to a scanner :(.
The Tutorial Manual I have is approx. 100 pages long. The basic commands
sections total about 25 pages.

Hope this helps.

-Bob

> Is there anyway to dump the contents of a cart to a disk
> and run the cart dump from disk?

There were some PD programs that did that, but its effectiveness depended on whether or not it was copy protected (it also didn't do the bank-switching carts). It also was tricky to do sometimes, because you had to wiggle the cartridge in just right while the computer was on (not recommended by Atari) and the program was running. I remember that sometimes it took me several tries to get it to work. Usually the computer would crash, or I would get a bad dump, and the file would crash.

There were also a couple of hardware devices that did the same thing, but much more effectively, and it handled copy protected carts. I forgot the names of all these products...it's been so long since I read about them.

If that's true then Mac GIF files are not really true GIFs. There is a spec out for the construction/format of a GIF file, and if the Apple weenies deviate from it then let em be on their own I say.

Cheers,

Jon

That was probably one of the most fun games of all time. He's right though.
Collect the # of diamonds as indicated at the top of the screen. One side
will show how many you have, and the other shows how many you need. When
you have enough, the whole screen will flash and you'll hear a sound. Then
go for it.

1319. Emulators...

Newsgroup: comp.sys.atari.8bit

Message-ID: <19970206144101.JAA02260@ladder01.news.aol.com>
Source record: 76111

I just HAVE to get my 2 cents worth in on this, since it has been bugging me for a LONG time...

When it comes to these emulators, why in the heck don't the people writing these things allow them to use MS DOS and load and run NORMAL files from either the IBM hard drive or floppy?!?!?!? Along with that offering normal use of all of the IBM's peripherals, ie: Printer, Modem, CD-ROM drive etc?

This would be a MAJOR step forward in the emulator scene and would entice a whole lot more people to run Atari software.

OK, OK, so you wouldn't be using an Atari DOS, or you would be patching it, SO WHAT? Look at what it could mean to everyone! Stuff like Carina BBS could then be run from an IBM via an Emulator, offering the whole world of Atari 8-Bitters a better source for BBS's to call. Even Pro! might be able to be ran on such an emulator, who knows? And then these 8-bit CD-Roms could be put to REAL use!

>
> Anders Skelander

For more detailed information, consult De Re Atari. However, I have
been doing extensive research on it and found some of the information in
that book to be incorrect.

In mode 10, the color assignments are as follows:
pixel color
0 P0
1 P1
2 P2
3 P3
4 PF0
5 PF1
6 PF2
7 PF3
8 BG
9 BG
A BG
B BG
C PF0
D PF1
E PF2
F PF3

In mode 9, everything is in a single color, and the brightness of each
pixel is determined by the pixel value ... IF the background luminance
is set to 0. If not, the brightness is determined by the formula
((background AND E) OR pixel). This is the only mode where you can have
16 different brightness values instead of 8.

In mode 11, the background is set to the BG color with 0 brightness and all other pixels from 1-F are given a different hue with the luminance set by BG, IF the background color is 0. Otherwise, the pixel value or OR'ed with the background color to get the resulting color.

If anyone has a machine that behaves differently, please let me know so I can update my notes.

The 800XL and all the other 8 bit Ataris with monitor sockets only output composite signals like the ones used in today's VCRs and TVs which have direct video and audio inputs and outputs.

> dump from disk?

With language carts (except bank switch carts) it's possible to write a
short program that will read the ROMs and write them out to disk.

With any cart (except bank switch carts), if you can boot DOS with the
cart in, you can copy the ROMs to disk using a DOS binary save command.

Other carts (which include almost all games) you need something like The
Pill, which has a special program and hardware for backing up carts and a
menu-type program for running the back ups from a floppy. This usually
requires some kind of psuedo-cart to be inserted to fool the cart software
in to thinking it's running from ROM, not RAM.

There are also a few p.d./shareware programs that do simple dumps from
carts, though they don't work very well in my experience.

The alternative is to modify the dumped software so it will run from a
disk. Many such former cartridges exist in this form in Yogi's infamous
Jellystone Park site (http://www.blast.net/scharles/) and elsewhere.

Yes actually there are a fistful of viruses for the Atari 8-bit. But they
mostly affect people with MIO and Black Boxes. There seems to be just
enough free ram to hide a virus in these devices. Properly placed in the
printer buffers for example. Anyhow, assuming the user doesn't turn the
Black Box or MIO off to restart the computer, the virus survives. Crafty.

: > SpartaDOS could read in more than one sector at a time.It's a nice idea - but we have to see where to get the space for the code from.
: I only have 1.5 kByte room for the whole code.

You might make more than one ROM bank.Like how the SpartaDOS X cart works.
(of course how would you switch it?)
You could also make the IDE interface "smart" like Atari disk drives.
It would do all the hard work.

: Second point is that you have to rewrite DOS, no matter which way you go. And
: then a 512 byte implementation would speed up the system much more than multiple
: sector reads.

True,512-byte sectors are the only way to go for MyDOS/AtariDOS.
Of course there's the problem that the byte at the end of each sector can
only say that 255 bytes of the sector are in use.
Also,the file buffers will have to be 512-bytes instead of 256-bytes.
(this is probably the reason that the 1050 drive only uses 128-byte
sectors,so that the disk and file buffers of DOS 2.5 would still be 128 bytes)

I meant that the multi-sector read/write would send all the sectors in one
big packet.

: > (AtariDOS and MyDOS only know the location of the current and next sector)
: > Of course Atari/MyDOS directories are always stored on sequential sectors,
: > so directory reads would be fast if a programme read the whole directory
: > at once.
: > This would also help out disk drives with track buffers since the whole
: > track could be sent in one frame.So you have to reprogram all floppy drives.
: > And it would still work when 1024-byte sector hard drives come out.This would be the smallest problem. Still all harddisks have 512 bytes/sektor and I
: can't imagine, that one really need one bigger than 100 MB.
: Look: Our Interface supports up to 240 partitions.
: If you let them all emulate Enhanced density disks, you'll need:
: 1040 sec X 256 bytes (single density disks will also need the space of 256 bytes per
: sector) X 240 partitions = ca. 61 MB.

I was really speaking of how slow 512-byte access would be with a
1024-byte per sector disk.Not the limitations of partition size.

: So do 2-3 16 meg partitions for working with and you have 100 MB.
: And to store files (f.e. a games collection) you'll better use CD-ROM.

Hey,will this IDE interface be able to use IDE cd drives?

Atari DOS 3 was the DOS that was designed to go with the introduction
of the 1050. Atari originally shipped some DOS 2.0s with the 1050 for
a brief time because DOS 3 wasn't quite ready yet. Then Atari came
out with DOS 3, which they later replaced with 2.5.

All he sees is the frontend and you can do it as you like. There should be two ones, one Atari-DOS like and ond one as CP.
> I meant that the multi-sector read/write would send all the sectors in one
> big packet.I did understand you wery well - but who will do such a new DOS ?
>
> I was really speaking of how slow 512-byte access would be with a

Something to say to the speed:
We have an average read-rate of ca. 30 kb/sec depending on the drive an a write rate of ca. 10kb/sec. Believe me or not - itï¿½s very fast. you can fill the main memory up in ca. 2 seconds. Show me the IBM-compatible who can do this at this time !

> : So do 2-3 16 meg partitions for working with and you have 100 MB.
> : And to store files (f.e. a games collection) youï¿½ll better use CD-ROM.
> Hey, will this IDE interface be able to use IDE cd drives?Every physical IDE-interface would be able to use ATAPI-devices (such CD-ROM, Scanner,
Tape-Streamer ...). The problem is the driver.
We ï¿½re not support CD-ROM directly at this point, but have a program to copy files from CD to disk.

Matt

Hi,

I'm looking for a few of the old Infocom text adventure games
in their original game packages from the early to late eighties. I'm
also very interested in any InvisiClues (hintbooks), maps, New Zork
Times and The Status Line newsletters or anything else Infocom related.
If you're not sure if I'd be interested in something you have then feel
free to email me anyway. These are the games I'm looking for:

Deadline
Starcross
Suspended
The Witness
Planetfall
Infidel
Enchanter
Sorcerer
Seastalker
Hitchhiker's Guide to the Galaxy (Solid Gold edition)
Wishbringer (Solid Gold Edition)
Zork Trilogy (Zork I-III in one box with Zorkmid coin)
Science Fiction Classics (3 games in a slipcase
Classic Mystery Library (3 games in a slipcase

Dave a00121@alumni.laurentian.ca

Now you're bringing back memories... back in the days when I only had 3 games for my 800XL (Defender, Wizard of Wor and Journey to the Planets - all carts) I decided to have a go at flipping the Defender score. After 8 hours of playing I discovered that when you got to 1,000,000, the score extended into the radar box (and hence didn't flip) boy was I annoyed ;) The trick was to fly in low at the start of the level until you got loads of enemy ships over you and then drop a smart bomb, that way you cleared most of the level and could get enough points for an extra smart bomb + life.
I also remember there were a few cool levels higher up where almost all the enemy ships were the mine-layer ones (the square ones that leave X's behind), with no landers on the level.

Hmmm.. I reckon I could beat a few of those scores. I wish I had my list of high scores with me (dozens of the things).. unfortunately I haven't at the mo. I once racked up over 20,000 on Kaboom (with a joystick). There was also some one here in the UK that had a disk based high score list, with disks being circulated every so often (you sent your disk in to have it updated), unfortunately his 8-bit went up in smoke and I haven't heard anything from him since. I've still got a copy of that somewhere too. If I go home in the next couple of weeks I'll have a dig round see if I can find it.

I don't know about that but you can get public finanial documents by searching the SEC's EDGAR database. I hope they keep letting people use it. There are a bunch of financial service industry reps that are bitching that people can access that stuff so well, so easy, so quickly and so FREE. They are putting pressure on the govt. to deny people access to that public info, so as to allow them to keep selling us that info for their profit.

I won't post the URL right now, but I have given you enough info to find it without too much trouble. I can post the URL if their is enough demand for it.

Cheers,

Jon

It is mostly likely another name for the SIO2PC cable. The SIO2PC cable uses a 1489 IC. You can use APE (recommended) or a couple of other programs with it. For some pointers to more info and software, check out my Atari web page at http://www.holyoak.com/atari/.

That definately sounds like a 2 chip version of the SIO2PC cable.
Actually, now that I think about it, that may be an R:verter cable for
connecting a modem etc.
There are a few different versions using different chips, and a simple
1 chip version using the 1489 chip. I built the simple 1 chip version
using a 1489 chip that I found in an R:verter cable (I found I would
use the SIO2PC cable more than a modem cable).
Many say that the 2 chip version is much more reliable than a 1 chip,
but I've found that my cable works much better (faster) than a 2 chip
one that I built and sold.
As for software to run it, check my Web page for links to "Utilities"
and the "The APE Home Page". You could also check the link to
"BRiTiSH Underground" for a schematic of the 1 chip SIO2PC cable.

Mark L. Simonson (marksim@bitstream.net) wrote:

: You mean like a C> prompt on the emulator's display? Ugh. Anyway, I think
: (don't know) that there are limits to the size of a disk volume and number
: of files that the Atari OS can handle--probably way less than a typical
: hard drive nowadays. Unless you're talking about modifying the OS or the
: "hardware". But then you'd be emulating something that never existed.
: (Confused? Me too!)

It can somehow be possible, like the way the ATR8000 worked. I forget the exact specs, but I believe it made the 8bit think it was reading the smaller 256 byte sectors (jeez... been too long). However, most hard drives have large partitions, meaning you got at least 2K per cluster. I'm not sure how much per sector or whatever, but it is somehow possible to make the emulated system think it's comfortably reading a hard drive. Doesn't the Black Box do this, as well as the MIO?

: I suggested to Chris Lam (author of Rainbow) some time ago that calls to
: printing devices from within the emulator be somehow passed on to the host
: operating system--essentially emulating say an Epson dot matrix printer
: using whatever is hooked up. Or allow the emulator access to the modem
: port, somehow making it look like an R: device. He didn't seem to think
: there was much point to it. And I couldn't come up with one. People mainly
: want to run games. But still...

You could also somehow make the emulator pass control of the system to that area of the system, or something similar, rather than make code. There's those of us who have these I/O cards with 16550s on them, which allow faster connections. Could someone make use of that, bypassing a section of the code for modem use on the ROMs?

Duh! He said he didn't want to use ANY DLI tricks. So...

Probably the easiest way to go is write your images to disk as XPM or PBM
files. Those are easily parsed by a small (Turbo)Basic program and converted
to our ancient .PIC files.

1351. Atari 8 bit Equipment Auction!

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-07 00:00:00 UTC
From: mrralan@aol.com
Message-ID: <19970207230001.SAA15669@ladder01.news.aol.com>
Source record: 76024

I have the following for auction...

1) Atari 130XE Computer
2) Atari 800XL Computer
3) Atari 850 Interface
4) Atari Printer
5) Atari Data Recorder
6) 2 Atari XF551 Drives
7) Hayes 300 Baud Modem
8) Hayes 1200 Baud Modem
9) 2 Atari Pro Joysticks
10) 2 Atari Radio Controlled Joysticks
11) Various software on diskette and cartridges

These items were sitting around for a long time and I am not sure if they all work. I know one of the drives was stopping and starting by itself and the 1200 baud modem had something loose inside it when I packed it away. If anyone is interested, leave me EMAIL as I don't normally check this newsgroup. Minimum bid is $100.00 for all. Bidder pays all shipping charges from the New Haven area of CT, USA and items are sold "as is" condition.

I recall that the 800XL had a switch installed in it to toggle between that and also the 800 operating system. I also believe that the drives have HAPPY chips installed in them.

dklugh@freenet.columbus.oh.us (Daniel Klugh) wrote:

>| I thought that OLE was a file format,not inter-process comunication.
>|

OLE is a set of predefined interfaces for COM objects to support if
they want to do OLE things.

OLE - used to mean Object Linking and Embedding, now means "OLE"
COM - Component Object Model

OLE is not a file format although some OLE interfaces support a
specific file format scheme that stores multiple streams inside one
file. You can write plenty of programs using COM without ever
implementing an OLE interface.

I used to own an Atari 1040STfm. I still have it somewhere, I think
the floppy drive is dead and it probably has about 10 pounds of dust
in it. It served me very well for a couple of years and then it
couldn't do the things I wanted so I had to buy an Intel clone to get
my work done.

Check out my Updated Atari Catalogs and find More Atari stuff! I've got Monitors for your Atari 8 Bit like Commodore CM-141 "Like the Commodore 1802" And Disk Drives for the Atari 8 Bit like Stock 1050 and a 1050 Duplicator Drive for Backing Up Software. Plus I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! Plus a Good number of SSI and Avalon Hill/MicroComputer Games, and Many of them are Complete. Plus some Flight Simulator II from SubLOGIC including Scenery Disks all for the Classic Atari 8 Bit. For the Atari ST & newer Computers I've added to my HardWare Catalog Supra Hard Drives, Spectre GCR Mac Emulators, Indus (Future) GTS-100X Disk Drives, Panasonic MultiSync Monitor that does Double Duty for both ST Color and MonoChrome Monitors and the Cable/Hardware to your ST Computer. I've also added Software to my ST Catalogs & revised my prices. Titles such as Brand New copies of Ultima V for those of you Ultima Collectors and for those who like Flight Simulators, theirs F-15 Strike Eagle, F-16 Combat Pilot, Falcon, Falcon extra Missions Disk, Fighter Bomber and Flight Simulator II. In Productivity Software, theirs Data Manager ST, Degas Elite, Easy Draw, MultiDesk, NeoDesk, Revolver & PageSTream. All for the ST.

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Please let me know if I can't attach files to your E-Mail. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS. The Most Powerful BBS SoftWare on any 8 Bit Computer Platform. For the 8 Bit Atari. Register with Shadow Software to keep the support coming.

I've added to my Web Page an area for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page.

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

No, that's the 65C02. The 6502C was Atari's variant (by NCR). It had a
HALT line, so that ANTIC could take control of the bus.

My personal best defender (have to dig out the slide now) is around 1,100,000; I only did that once, and before and since I've never topped 350,000/ But sometimes you get into a perfect rhythm, and everything goes your way.

Remember the old Atari TV commercial for 2600 Defender: "Every blip is a ship; on a body-snatching trip! And it's up to Defender to save them, Defender, a great Atari game."

Well, I guess it must run much faster on Macs than it does on PCs then. From test results with the demo version every frame is not really a viable option, because even on my P166 it is way to slow for any use. I usually use the "Even More" setting and get ~20-25 fps. Chris should be able to up the speed in future versions though for the PCs. Still it's tops for compatibility and beats that piece of crap Xformer to a pulp.

The guy who began this thread gives just one indication of what's wrong.
Itay claimed that you could do a screen dump. If you try, regardless of
printer of interface, you get a little window on the screen claiming that
Error #000 has occurred, whatever the heck that is. I contacted Itay when
it happened to me. He told me that the module was a standard screen dump
that should work, but he never tried it out because he doesn't have a
printer for his Atari.

Then we have the screaming "Q"s.

The list goes on and on ...

I d/l'd the files as text files and then ran them through a UUDecode
program (XFERPRO). I kept the files with the .GIF headers and discarded
the .MAC files. The GIFs displayed in a number of viewers on my clone,
and I'm assuming that one of Jeff Potter's programs will display them on
the Atari, although I haven't had time to try that.

So now I know what the .MAC files were!

Thanks.

(Asks if there's a newer version of Flickerterm.)
I don't know about which is the latest Flickerterm.
But that screen filling up with 'Q's rings a bell.
It's been a long time since I did com with my A8, but
the P:R: connection, some or all of them, did that once
in a while. Can't remember anything more about it.
Probably have to hit RESET and re-run your term software.

> > I am trying to set up a BBS again under Sparta Dos X. Will anyone be
> > willing to sell their cartridge to me?
>
> What software are you going to run your BBS on? BBS PRO!? Oasis?
> Something else?

For some reason SpartaDOS X is really lousy with continuous file access.. Way back when I first got SpartaDOS X i tried to run an express (the original) bbs with it... it always somewhere along the line could not read a file, or got the dreaded line across the top of the screen reading "DISK CORRUPT: RUN CLEANUP.COM"

that really pissed me off... and has anyone tried using Flashback to back up their files with spartados X?? for some reason, it has big problems and reports it can't read some files! (different files each time..)

I love spartados X for USING.. the interface is simply wonderful.. but if im doing a lot of disk access, (file copies, deleting) I always run cleanup and many times it finds a difference in the sectors free...

Now I run the BBS (express pro 5.0) with spartados 3.3 and it does NOT exhibit any of these problems... If i can stand the harder to use command line in the older dos for massive file copies, deleting etc, i will use it and cleanup never finds a problem on the drive..

simply, all i want to say about this in relation to running a BBS on the 8-bit is dont use spartados X... its great more for your own personal use...

by the way, the version of my SpartaDOS X cartridge is 4.21. I understand that FTe had a new ROM for version 4.22, does anyone recall what that version had different?

Are you into HOT CHAT? We've got the world's largest voice-personal dating system, as well as the hottest, sexiest "1 on 1", "2 on 1", and "PARTY-LINE" chat you'll find anywhere, all in one place! And you don't have to call a 900 number to get in on this hot phone fun!

You can choose from 5 hot programs that are sure to fulfill your every desire!

You can press 1 from the main menu to choose from our sexy "1 ON 1" PLEASURE MENU, then:
*to talk to a BEAUTIFUL SEXY GIRL, press 1.
*for a 1 on 1 session with an experienced DOMINANT MISTRESS, press 2.
*for steamy talk with a LUSCIOUS TRANSVESTITE, press 3.
*for an erotic 1 on 1 chat with an EXOTIC TRANSSEXUAL, press 4.

*for some man to man action with a HOT GUY, press 5.
You'll be billed just $3.99 per minute for your selection.

Or you can press 2 from the main menu to DOUBLE YOUR PLEASURE, then:
*to speak to 2 HOT SEXY GIRLS, press 1.
*to get it on with a swinging WILD COUPLE, press 2.
You'll be billed just $4.99 per minute for your selection.

Or you can press 3 from the main menu to join the GROUP ORGY LINE!
*You can party with the nations nastiest swingers for only $2.50 per minute.

Or you can press 4 from the main menu, then:
*Press 1 to join the FANTASY NETWORK. This is the world's only phone service that allows you to connect with people who share your personal fantasies. This state-of-the-art voice mail system lets you listen to messages from beautiful girls, sexy transvestites and she-males, gay and bisexual males, and dominant women. Leave them a hot and sexy message, then call back to see what erotic message they have left for you. You'll be billed just $3.50 per minute.
*Or press 2 to listen to a hot selection of recorded fantasies steamy enough to make you explode! Choose from beautiful, sexy women's fantasies or domination stories. You'll be billed just $2.49 per minute.

Or you can press 5 from the main menu for the HOT AND NASTY DATELINE, where you can listen, and respond, to voice personal ads from hot horny girls in your neighborhood, including their real names and home telephone numbers! You can also leave your own personal message for people to get in touch with you. Make new friends on the world's busiest voice personal lines! Meet singles or couples, gay or straight; you'll be billed only $2.99 per minute.

***JUST CALL 1-800-756-3906 to use your Mastercard, Visa, or American Express card. The charge is just $2.49-$4.99 per minute, plus a 50 cent connection fee. 18+ only.

***OR CALL 1-900-745-4398. The charge is just $2.49-$4.99 per minute. Must be 18 years of age or older.

Call now!!! YOU WON'T REGRET IT!

: >Is something wrong with 2.71?
: >--

: The guy who began this thread gives just one indication of what's wrong.
: Itay claimed that you could do a screen dump. If you try, regardless of
: printer of interface, you get a little window on the screen claiming that
: Error #000 has occurred, whatever the heck that is. I contacted Itay when
: it happened to me. He told me that the module was a standard screen dump
: that should work, but he never tried it out because he doesn't have a
: printer for his Atari.

There is no error#0,obviously a programming error.

: Then we have the screaming "Q"s.

I get that with FlickerTerm as well.And also with a BASIC programme that I
wrote,all using the P:R:Connection.
On the (non-XE) Ice-T,I could just press RESET to get rid of the Qs.
I wonder if it's something to do with the P:R:C...

: The list goes on and on ...

Too bad,I was thinking of upgrading to a 130XE just so that I could use
Ice-T XE.

: >What does a subscription to Page 6 run? How do we pay in $?

: Page 6 Publishing (Les and Sandy Ellingham)
: P.O. Box 54
: Stafford
: ST16 1DR
: England
: tel: 01785 241153
: Magazine only Magazine and Disk
: UK #15.00 #25.00
: Europe (Air Mail) #17.00 #32.00
: Elsewhere (Surface) #17.00 #32.00
: Elsewhere (Air Mail) #23.00 #42.00

Let's look a bit at this table why don't we?

Hmmm, if I live in the U.K., a Magazine subscription is 15 Pounds. Ok, fine.
A disk subscription is 25 pounds.....ok, that tells me that they want 10
pounds to include disks.....fine.

Look here. If I live in Canada (and I do) it costs me surface 17 pounds for the
magazine.....2 pounds extra for shipping.....so it goes to reason that a disk
subscription would cost 27 pounds.....but it doesnt!!! It costs 32 pounds!
What the heck is that all about? An extra 15 pounds to include a disk?

Same goes for Air Mail......23 Pounds for Air, add the 10 Pounds U.K.
subscribers pay for a disk, and you get 33 pounds....but no, they charge
42 pounds! A 19 POUND difference!

Got any more reasons NOT to subscribe?

: I've received two issues in my subscription so far. Just one advertiser, but
: the quantity and depth of the content surprised me. If you can spare a little
: cash, I highly recommend it.

I don't.

Personally, a "Letter to the Editor" in a previous issue, asking about the
difference between "hard sector disks" and "soft sector disks" had such a
Bull shit answer, I could not believe it. DEAD Wrong. I thought to myself, if
this is the type of answers they give, how will I know when they are B.S.ing
if it is on a subject I know very little? So, I said to heck with this,

I am not wasting any more of my hard earned money on this mag.

Just an alternative opinion.

Willy

i don't know, why anyone would like to do it, but such viruses really exist. they can easily multiply even on systems without hard disk - they code is located on page 6 ($600). they are modifying HATABS, applying they own write procedure. binary file is recognized by $FFFF header, and while copying or saving virus code is appended to file. these viruses cannot check wheter file already was infected or not, so virus code can be appended many times (program and virus still works properly).

if you are interested, i can publish here source code of one of them, so you can all see, that it works. i have also antivirus program - copier, that checks wheter file is infected or not, an if it is, it removes virus code from file (even if appended many times). this program also wipes virus from memory.

To my knowledge there weren't any viruses created for the8bit (who would bother??? Unless you REALLY got a lot of free time on your hands) I do remember the pseudo-virus. that would destroy the character set and eventually cause the tv screen to appear like distorted/lost reception. very cool, but also very harmless...

-any legitimacy to the pirates "art".
-

Maybe you missed my reply to this thread originally, but the gist of it is: I never claimed to NOT be a pirate. I didnt buy most of the software I cracked (although I do have/had the originals. A software reveiwer sent them to me to crack).
I'm not saying its right to pirate. The only reason I started the archive is that the similar ones for apple and commode 64 exist, but none for the lowly atari. I could actually give a shit less whether or not anyone even *USES* the archive. Its there to use if you want, and if you dont want to, I dont care. But I'm not justifying nor apologizing for my actions, and I dont hide behind any "pirates arguements". If anyone holds the copyright to ANYTHING in the archive, I will be happy to delete it on your say so. I'll go further - if anyone who still SELLS these software items objected to them being in

the archive, I will remove them.

Message-ID: <5djqbq$4or@alexander.INS.CWRU.Edu>
Source record: 75923

NO, it does not work..that is why there are questions..and of course
ITAY can't say that it does if he does not have a standard printer
for HIS 8-bit. In other words it was never tested. ICET 2.6 is the
better version. The only improvement over this in 2.7x is the Z-modem
download. So, if you are a DOWNLOAD HOG..use 2.71..but if you want to
do anything standard..use 2.6. By standard I mean, Upload Text, or
Capture Text..there is NO BINARY upload in ICET at all. Really, this
is the best terminal software ever made for the 8-bit in that it
has pull down menus and is almost easyer to use than a Mouse based
software/TERM. Push a few buttons and Wala! The bigest feature
of the terminal program is the 80colomns minus the hardware chips..
8-bit has a 40 colomn output..ITAY almost has
a WINDOWS 95 desktop for the 8-bit..I mean it reflects it pretty close or,
even better, closer to a MAC desktop. If he had published this during
the 8-bit years...he would have made a ton of money..but, for us 8-bit
left-over users..it is a GIFT..passed down by time.. an excellent programing
skills..

1394. ANNOUNCE: EmuZine

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-09 00:00:00 UTC
From: Will Fisher <blackat@direct.ca>
Message-ID: <01bc1660$804665e0$b4f7aecc@127.0.0.1>
Source record: 75925
Cross-posted to: comp.sys.acorn.misc,comp.sys.amiga.emulations,comp.sys.amiga.misc,comp.sys.apple2,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.att,comp.sys.be,comp.sys.cbm,comp.sys.cdc,comp.sys.dec,comp.sys.ibm.pc.misc,comp.sys.m68k,comp.sys.mac.misc,comp

Hello,
My name is Will Fisher and I am setting up a new e-zine on the web for
people who love emulators. This e-zine, called EmuZine, will focus on
specific
emulators, the platforms they run on, and what emulator is the best in it's
class of emulation.

The reason for this message is that, like any e-zine, we need people
to help write articles, and to provide ideas for the e-zine. As this is a
non-profit e-zine all submissions must be donated. All submissions become
property of EmuZine and will not be returned, once a submission is accepted
EmuZine will e-mail you for permission to 'publish' your article on the
web.

EmuZine is also looking for a few 'permanent' authors for the e-zine.
These people will have the distinction of having their own spot each and
every
'printing' of the e-zine. I am looking for one such person for every major
emulated platform. This post would not be 'for life' as such, you would
hold
the post until you either got tired of it, or wanted to give it up to
someone
else. EmuZine also has the right to transfer the post to another person at
any time, without warning (but we would NEVER do that, except in very
serious
circumstances).

What is good is any e-zine without some illustration? If you are an
aspiring computer graphic artist or if you've been doing it for years we
would
love the chance to use your illustrations in the e-zine. You would, of
course,
get full credit in EmuZine. If you have a comic, or would like to create
one,
that focuses on computer usage, or hopefully on emulators, we would love to
add it to the e-zine.

If any of this sounds interesting to you please respond to this message
via e-mail as I do not read all the NG's this message was posted to.
This message is in the comp.sys.{any emulated system} to reach the maximum
of
interested people.

Thanks for your time,
Will Fisher

BKproductions Online!
http://www.ogopogo.com/blackat
blackat@ogopogo.com blackat@direct.ca

(NB: EmuZine is not online as of yet. The above web site will be
undergoing major renovation soon. EmuZine will show up once
I get enough interest raised, and articles written!)

1395. Page 6

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-09 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <32fddb00@pianosa.demon.co.uk>
Source record: 75926

Whilst reading the usual rubbish I find here, William Moeller wrote something interesting to All about Page 6:

Hello William,

WM> Same goes for Air Mail......23 Pounds for Air, add the 10 Pounds U.K.
WM> subscribers pay for a disk, and you get 33 pounds....but no, they
WM> charge 42 pounds! A 19 POUND difference!

Oh no, not all this again. Like I've said before, it cost P6 far more to ship overseas than people in the Americas give credit for. It may cost you next to naff all to ship something around the world, but not over here. :-(

The trouble is, Britain is still suffering from what I term "state control syndrome". When all our utilities were under state control, we had little alternative but to pay up. Despite selling off several of these utilities, and opening the market up to competition, there still exists an attitude of "ah well, we've got to pay it". And since postal deliveries are state controlled, we can do nothing about the charges. Maybe that will change soon, if postal workers go militant again. (During the last postal strikes, the govt. threatened disenfranchisement of the Post Office)

Another thing to consider is the Post Office's banner waving about their pricing structure: Prices are lower in real terms now than they havee been for the last ten years. It doesn't alter the fact that on a world-wide scale, they don't compare favourably with some rates. Notably those of US & Canadian postal services. Furthermore, P6's NAU doesn't get the 'magazine rate', for some reason. My guess would be that they don't send enough copies overseas to qualify. :-(

WM> Personally, a "Letter to the Editor" in a previous issue, asking about
WM> the difference between "hard sector disks" and "soft sector disks" had
WM> such a Bull shit answer, I could not believe it. DEAD Wrong. I thought

You may well be right. If the answer was wrong why not just write to them and tell them the *right* answer? Just so long as you don't give a right slagging in the process, your letter will get printed. In fact, even with the slagging it would probably get printed. Perhaps with the more 'choice' words removed. You see, it's like this: people make mistakes.

Mine was to to reply to your message, probably. :-)

The thing is, over here P6's NAU is just about all we've got. And compared to what I used to have to pay for ANALOG over a decade ago (just the mag, no disk 6.00/issue) it's still dirt cheap.

KeroKitty (kerokitty@aol.com) wrote:
: Help fellow Atarians! Need to know how to use ATR images in My Atari 800.
: Can ATR images be converted back into a Atari drive? Use binary save/load?

: Your help is greatly appreciated. Plz email to KeroKitty@aol.com

ATR is an image file to use on PC. I know at least one program that
can convert an ATR image to a normal disc, that works directly on the
atari 8bit. This program is called IMG2DISK.COM and belongs to the support
disc for the msc IDE controller. I think it is also on the ABBUC magacin
disc from december/january.

Hope that helps.

XL-it! 0.17 is now available at:

http://myst.slcc.edu/~markus

New features are:
- new userinterface
- Ron Fries' pokey-emulator
- new sound-driver
- ATARI-key (->Alt,AltGr)
- improved SIO-emulation (SpartaDOS 3.2g works now)
- 180k ATR support (184336 Bytes images!)
- joystick-calibration

Have fun,

Markus Gietzen

>(Confused? Me too!)

Since the IBM already has access to all of the files on the HD, CD etc.
And use of the modem, printer, etc, it should be a simple patch to DOS to
change the vectors for D: R: P: etc. to point to a translation routine to
make them work with the attached IBM peripherals.

>Any ideas?

You'll have to place EXE files into a disk image file before you can
run it. XFD2ATR is simply a conversion program, changing a raw XFD
file (which is a straight copy of a disk) into an ATR image file (an
ATR file has a 16 byte header which contains disk structure info).
So, get a DOS ATR image file, copy it to GAMEDISK.ATR and try this:-

XFORMER MYDOS.ATR BOULDER3.EXE

{Note: I used BOULDER3.EXE instead of the long filename, because the
ATARI cannot use long filenames, it's up to you to rename it)
Once you are at the DOS menu, press F11 to bring up the XFormer menu,
and load GAMEDISK.ATR as D1 (replacing MYDOS.ATR).
Press ENTER and go back to the DOS menu. Now, type "I" [FORMAT DISK],
1, Enter- this will format the new disk image in D1. type "H"[WRITE
DOS] and 1- this will write MYDOS to D1. Now you have a fresh DOS disk
to work with, type "C"[COPY FILE(s)], D2:*.*,D1:*.*- this will copy
the EXE file into the GAMEDISK.ATR file.
There are "Boot Sector File Loaders" around that makes it easier to
load the EXE's once they are in a disk image, but I figured it'd be
better to use DOS so you know how it works.
Ok, now you have the EXE's in a disk image which also contains DOS, so
"Boot" DOS (no basic), get a DIR (either press the drive #, or "A" and
"D1:*.*". Press [L] and type in the filename {eg. D1:BOULDER3.EXE),
and hopefully it will load for you.
If not, it will need a "Boot Sector File Loader", so check my WEB page
if needed.

Steve.

Actually, the better ones I dont mind having there. It is an ARCHIVE,
after all. If the game is fun to play, (even if its not!), it should
be there, maybe in its own section.
You notice all the analog ML games are there.
Which gives me an interesting question: All my old ANALOG mags say
(for example) "Fill'er up" (c) 1982 Tom Hudson, then the text of the
article says "This game is public domain".
Is this a proto-GNU software license?

You have to have a dos image as the first one. emulators cant handle
EXE's to BOOT their virtual machine from.
use:

xformer mydos45.atr boulder3.exe

then use "L"oad binary file, D2:boulder3.exe
you have to have the file in 8.3 format or Atari wont see it right

>I am looking for a memory expansion module for my 600xl. Any suggestions
>as to where I can find one?

Yeah, a cheap used 800XL or 130XE. Also comes with a monitor port
expander and the ability to go beyond 64KB! :)

Not meaning to be sarcastic here, but at some of the prices you can
nab 800XLs or 130XEs, I can hardly think that you would be saving much
by hunting after the more hard to find memory expander for the 800XL.

On another note... one more good suggestion might be in order. There
is an Atari8 hack FAQ or something around. I am not sure, but there
might be some docs somewhere on how to add your own memory to a 600XL.
I know there are lots of good mods for the other Atari8's. Might be
worth checking out.

Cheers,

Jon

: very cool, but also very harmless...

Was this program called Paperweight, released in the April issue of one of the magazines, like Antic?

Reminds me... Back in college, my roommate and I were bothered to hell and back by the insistence of this kid who was always looking for software, and came to us all the time. I came rather close to writing a trojan for him, that would look like it would either format the disk or overwrite most, if not all, the sectors on the floppy. I had the code in mind at the time, and while it did the nasty deed, it would tell him to wait, give him a little graphic bar, that sort of thing.

Fortunately, we never did it. He 'lost' a $20 bill and we put crumbs in his floppy jacket, and his visits tapered off after that.

In <32fddb00@pianosa.demon.co.uk>, Brad Rogers <brad@pianosa.demon.co.uk>
wrote:
: Whilst reading the usual rubbish I find here, William Moeller wrote something
: interesting to All about Page 6:

: Hello William,

: WM> Same goes for Air Mail......23 Pounds for Air, add the 10 Pounds U.K.
: WM> subscribers pay for a disk, and you get 33 pounds....but no, they
: WM> charge 42 pounds! A 19 POUND difference!

: Oh no, not all this again. Like I've said before, it cost P6 far more to ship
: overseas than people in the Americas give credit for. It may cost you next to
: naff all to ship something around the world, but not over here. :-(

I know the U.K. has expensive postal rates....I am talking about the difference
between Disk and Magazine (only) subscriptions. I can take it if Postal
rates are a lot higher for overseas....it makes sense! And, even higher still
for Air mail....it makes sense! HOWEVER, what does not make sense is the fact
that a DISK subscription costs MORE than the 10 quid U.K. customers pay.
Are you trying to tell me the weight of a disk increases the postage cost
by 7 pounds by Surface and 9 pounds by Air??!!

The extra cost levied on overseas subscribers for disk subscriptions is not
justified in my humble opinion.

The cost SHOULD be the Magazine only surface overseas rate
(or Air Mail rate) plus 10 quid, the same as a U.K. subscriber
....the cost of the Magazine only rate plus 10 quid.

: Another thing to consider is the Post Office's banner waving about their
: pricing structure: Prices are lower in real terms now than they havee been for
: the last ten years. It doesn't alter the fact that on a world-wide scale, they
: don't compare favourably with some rates. Notably those of US & Canadian
: postal services. Furthermore, P6's NAU doesn't get the 'magazine rate', for
: some reason. My guess would be that they don't send enough copies overseas to
: qualify. :-(

Sure, our rates are cheaper, and the U.S.A. has even cheaper rates.
However, your argument does not explain why the U.K. has a disk subscription
with a cost of 10 quid over and above the magazine subscription, and overseas
customers have to pay 17 quid over and above the magazine subscription for
surface, and 19 quid over and above the magazine subscription for Air Mail?

Please explain how this is justified.

: WM> Personally, a "Letter to the Editor" in a previous issue, asking about
: WM> the difference between "hard sector disks" and "soft sector disks" had
: WM> such a Bull shit answer, I could not believe it. DEAD Wrong. I thought

: You may well be right. If the answer was wrong why not just write to them and
: tell them the *right* answer? Just so long as you don't give a right slagging
: in the process, your letter will get printed. In fact, even with the slagging
: it would probably get printed. Perhaps with the more 'choice' words removed.
: You see, it's like this: people make mistakes.

: Mine was to to reply to your message, probably. :-)

No it was not a mistake at all. I was only steamed at P6 for gouging on
a disk subscription. I was appalled at the fact they answered a question
they obviously had no clue about, and got it so wrong. This was the final
straw. Since I was not going to re subscribe, I did not bother to correct
them. I had considered getting just the Magazine subscription, but thought
to myself "if I don't have the disk to go with the Magazine, why bother?"
10 Pounds extra seemed fair for a disk subscription....but not 17 or 19.
That much extra can't be due to postage.

Willy

My version is actually 1.3. My instructions came straight from the Kyan manual. I haven't done any Kyan programming in a looooong time. I'm sure the libs are different for different versions. Am I going to write code with 1.3 and then copy the 2.02 LIB? Probably not. The version doesn't really matter, does it? As long as the code was written with the accompanying library.

Your quotes are basically the same as I posted. Tony asked for Kyan help, I responded. I even told him the version I was quoting. If he chooses to use something else, so be it. If not, at least he has some direction now.

-Bob

1427. Atari stuff for sale

Please let me know if you know of someone who may want the following

Atari computer equipment:

1. ATR 8000 (an interface like the Atari 850 that allows Atari computers

to run CP/M operating system and programs like Wordstar and Dbase (these

programs are included).

This unit also allows the use of other types of disk drives.

2. Two (2) Shugart DD/DS Disk Drives (these work with the ATR 8000).

3. Two Memory boards (16K.)

4. An Atari 820 40 column printer.

5. An Atari 410 Data recorder (with tapes).

6. An Atari 400 keyboard.

7. Various manuals and books on Atari computers.

All these items are available for immediate sale for best offer. We will

sell the items separately.

JDM>>by the 8-bit-OS?

JDM>The 8-bit OS supports no such feature. The Atari 8-bit computers have
JDM>a MONURAL output! Have you ever owned an Atari 8-bit?

For all of you who are unbelieving. The 8-bit ATARIs support STEREO.
the only thing you have to do is to insert a second pokey and to do some
wiring then you have STEREO on your XL and a lot of programs support it
(Even the older ones. You simple have to patch them for that purpose).

Tschuess
Frank

P.S.: If a programmer wants to support STEREO. The addresses for the
second pokey are at:

$d210 to $d21f

Anyone remember this program?
it was kind of a psychedelic light show program, all joystick and keyboard controlled. on the disk it was referred to as a "light synthesizer".
the way it worked was:
the Joystick controlled a cursor which would draw a predetermined shape when the button was pressed. there were several shapes available thru the keyboard, along with decay settings and mirroring and color/color fade options. when the button was let go, the shapes would fade away.

many mind-numbed evenings were spent playing with this thing during my teenage years.

I would love to know if this is out for the Mac,PC or ST in some form or another.

(Tony Bufort asks about Kyan Pascal. Bob Rayn gives answer.)
I think Bob's instructions were complicated, but ok. I said
in my post that Kyan Pascal doesn't make 'stand alones'. I
stand by that (alone if necessary). I don't consider having
to have the LIB file on the disk with the object file
a 'stand alone'. There were probably different LIBs as
Kyan developed. Bob R.s was version 1.0?, mine is 2.02.
I imagine the LIB file is different. I still recommend
CLSN Pascal, I know B & C had it. I'll quote from my
book: page xii of introduction.
Note 1: if you want to run your compiled programs
independently of the Kyan Pascal source disk, the Library
must be copied onto your program disk.
Note 2: If you are an advanced Pascal programmer and
want to append portions of the Runtime Library directly to
your Pascal program, please contact Kyan Software. We
offer a Code Optimizer Toolkit which includes the source
code for the Runtime Library.

>Matt
>P.S. Hope somebody can understand me - my English is to bad ...
> --
Hi there.

That just doesn't hold water and never did. Never have the pirates who claim "I only copy to try it then I buy it" actually have bought the software they copy. The claim you make that nobody makes money selling this stuff doesn't work either, simply because that it's people who make copies don't buy stuff. At any rate they DO carry stuff that's "no longer available" so that standard excuse can't cut it. Add to that the people who now pirate these programs have done so for years, long before much of the 8bit software "was no longer available". As for the size of the market, don't forget that these dealers also carry other lines, much of it also discontinued gear of all sorts, these markets add up quickly.

Pirates will attempt to justify their actions until the end of time but facts are facts and for every pirate excuse there are facts that disprove any legitimacy to the pirates "art".

>

I am one of the more vocal of old Mikey boy's victims/customers. He stiffed me on the manual and disk for an rtime 8 clock and another local 8bitter for one of his MIO boxes. He's left without a forwarding address, phone number or anything else and has moved at least twice since his dissapearance. It is very dissapointing especially since he's not only taken copyrights/patents and existing stock but also the money of several of the remaining 8bitters leaving them with nothing which has no doubt led to several leaving the 8bit community and others to resort to piracy of FTe's software "to get their moneys worth". I've heard rumor that one supplier who'd sold remaining stock and manufacturing rights was never paid. However since the person reporting that last story has been a bit of a rumor monger in the past (whose name will be witheld) I don't know if it's fully true.

'Escape from Epsilon' was an Antic J. D. Casten BASIC game. June '84, vol 3 # 2. Around Cleveland OH, there is a compiled version (I have someplace). Casten also wrote 'Risky Rescue' about the same time (Antic 4/'84, vol 3 # 1). There is a url that has Antic and ANALOG disks, if you can find it, it may be mentioned in the FAQ (nope, just checked, M. Current doesn't list anything (c).) And I haven't written down that url where Antic and ANALOG disks were/are. Yogi's site probably has some of the better magazine games, try there.

Source record: 76068

(ewwwww... I LOVE to 'f'ollowup to my own posts.)
I went looking for 4/84 and 6/84 Antic disks. I want to thank
Tom Hunt for having more resources than a cat with 9 lives.
His CTH www site had ftp://ftp.clark.net/pub/atari/ link, where
Antic disks are AFTER 10/84 (11/84 on I think). Also Tom Hunt
has prepared an index of Antics (also ANALOGs), but his
Antic index starts 11/84 (hmm.. coincidence?).
Part Time BBS here in Cleveland OH has the best collection
of Antic and ANALOG disks I've seen anywhere, 216-582-1196.
BUT, the sysop is like the name says, Part Time, so it may
take a while to get validated and stuff.
I have all the magazines and some of the disks, but not
those.
Marlin Bates collects Antic and ANLOG disks and his www
site may have some.
Finally, I don't think Yogi wants individual or even much
at all magazine games, so uploading there is no good.
I'd rather not send files to individuals, I mean if
I could upload just those two games to a internet site,
that'd be more time effective.
I'm sure Tom Hunt's CTH BBS 419=368-4413, has those
two games (Risky Rescue and Escape from Epsilon.)
So, somebody e-mail me where on the internet wants
individual games, and I'll try it. Otherwise, I know
I've been a wealth of information. Spent a fair amt.
of time looking this stuff up, but haven't told the
guy where to get the games on the internet.

Now wait..wait..Icet2.6 has no problem with dumping what is on the
screen to my EPSON printer. I have it excuting under Sparta DOS and
with a PR: connector. Everthing works fine. Only 2.7..has the
Printer Problem...I use it all the time to call the library and Freenet.
I have even surfed the WEB..sent E-Mail and recieved E-mail from
all over the world. ...

AND I CAN DO IT WITH AN ATARI...8-bit. I have DL's some excellent games
from YOGI'S Web sight..which is still active..but the way..but it is
2.7 gives you that..but I suspect 2.6 would do fine using X-Modem
downloading.. just requires a bit more typing. I still get alot of use
out of the 8-bit even though I have a stupid WINDOWS machine...which
gets stupid'er by the Mega Byte.

and that is information that is free...now if only I could located a
certain light-pen program...:)

The 6502 B is a 2 Mhz standard 6502. I have owned a later-model
800 with a 6502C processor board. It also did not have the thumb
tabs, just screws to hold the top down, and the memory and OS cards
were not in nice plastic cartridges.

The printer was attached through an XETEC Grafix AT interface, but just to
make sure, I also swapped it to the P: port on my P: R: Connection. Maybe
the screen dump worked for you because you were using an earlier version?

Honestly, Michael, I and a few savvy people on FidoNet went around the
2.71 merry-go-round a few times and weren't at all happy with it. It was
not up to Itay's standards.

You know, it was a problem with early versions of either BobTerm or Determ, I really can't remember, but it could have been related to the PRC because some PRC users had the problem and some didn't, but 850 users didn't report the problem. Come to think of it. Bob Puff fixed it through software, so it must have been an early Bobterm.
But getting back to Ice-T 2.71 -- I got the problem under some DOSs, but not others, using the PRC all the while. It made no sense for me to try to hunt the cause of the problem down, because I have a PC clone with a 28.8Kbaud modem sitting in it, and the modem attached to my Atari is only 2400 baud.

> Cheers,

> Jon

I had a problem with "screaming J's" when I first started using
Ice-T 2.71. Since I was using SpartaDOS X and he had mentioned
no guarantees of compatability with SDX I tried 3.2d and it
seemed to work. But then it stopped working again.

Turns out... I can't set key click to normal under it or else I get those
"screaming J's". My girlfriend doesn't like the normal key click and
changed it. That is why it started working with 3.2d and then
stopped, because I reset the setting.

It was doing it with my MIO, so I don't know if that's why I got
J's instead of Q's, but you might want to check if changing that
setting helps (it is the default).

But Bob also fixed the problem with MIOs not working at
19.2 reliably with a software "fix". And that wasn't BobTerm
that was at fault. So just because he "fixed" it doesn't mean
that he didn't just find a way to work around faulty hardware.

Though not endorsing copyright infringement, I wonder if the archive might actually help business for the old Atari dealers. Anyone who hasn't enjoyed Atari software in the past might find the archive an interesting introduction. After fooling around with an emulator or two, a real Atari 8 bit system could look really good.

I wonder how B&C is doing since the internet has taken off. Anyone know?

Markus, you have outdone yourself!!!

This is truly what I would consider THE Atari Emulator.
The user interface is very easy to use now- Great work there.
The sound quality was TOTALLY unexpected. It detected my SB Pro clone
and used it to perfection. Everything I have tried so far works well.
The graphics display is excellent, all the colors come thru without
anything dropping. Of course any DOS or program that uses Ultra Speed
like SuperDOS won't run, but who needs Ultra I/O anyway with the speed
that everthing loads normally.
As for the EMU speed, I've found that setting the frame rate to around
7, it runs almost identically to my 130XE. As I only have a lowly 486
DX2-80, this is VERY promising for anyone using a Pentium etc.

Great work!
I wish I could offer you something more than just a great response for
this incredible feat of programming, but all I can say is-

Thank you.....

I know, font size aint gonna work. but imagine just how big this Thank
You would be!

Lets all cheer HOORAY for Markus.....

>Reggie

Sounds very similar to what I have installed in my 130XE. It is called
SuperMON, and besides having a resident Monitor that I can use ANYTIME
by pressing Control/Shift/ESC (yes, it breaks into programs while they
are running), it also gives me a built in translator to run older
400/800 programs. All it entails is "piggy-backing" the SuperMON OS
Chip onto the XL/XE OS chip, and running a switch off to the side.
Altho most later software is designed to run on an XL/XE, I just leave
the switch in 400/800 mode. Then if something DOESNT work, all I have
to do is flick the switch. I even have a multi-colored LED (RED/GREEN)
which shows me what mode I'm in. Green for SuperMON, Red for XL/XE.
I wouldn't be without it either. I've gotten so used to having it
installed, that I nearly went MAD at a time when my Atari refused to
work, and all I had was a standard 600XL.

If anyone wants to check out SuperMON, just for old times sakes,
I have posted a file called SUPEROM.ZIP on my HP. Unfortunately it
only works for PC Xformer, as a replacement for ATARIXL.ROM
But anyway, it's there.......

It is excellent esp. the sound...
I'm wondering though, it seems all of the Atari emulators have trouble
emulating a certain graphics mode. I think it is a 4-color mode so
most programs don't use it but it just so happens a few of my favorites
do (the Ultima series, Microleague Baseball). I've tried all of the
available emulators and none of them can reproduce this mode...

Still, XL-it! is easily the best... keep up the good work...

That would be the 320x192 2-color mode. (Graphics 8 in Atari BASIC)
The emulators actually emulate it correctly, the reason it doesn't look
right is that It used a technique called Artifacting to produce extra colors,
making it appear to be a four color mode.

Artifacting takes advantage of the limited resolution on TV sets and low-end
composite monitors. If you hooked your real Atari up to a high-enough
resolution monitor, these colors would disappear, and the display would look
just like the emulators do.

It would be intersting to see an emulator try to emulate the artifacting.
I've seen Apple II emulators accomplish this, but none of the Atari emulators
do it.

A friend of mine had Grog's Revenge on his Commodore 64. I used to play it all the time. It was a ton of fun. Unfortunately, I don't think it was ever made for the Atari. Another fun one that I only saw on the Commodore was Little Computer People. I always wondered why they didn't put them out for both platforms?

I may be misinterpreting your question, but doesn't APE (Atari Peripheral Emulator) do all of this. I have the APE system set up with the SIO2PC cable and with my Thinkpad hooked up to my 130XE, I can send files to my Deskjet, access files on floppy/hard drive and access the modem on my PC using the APE software.

I find the emulators, XL-IT in particular, are best for total portability (when I am away from my desk).

Try APE, I think you'll be pleased with what it can do.

Source record: 75897
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

(This should be in Atari advocacy, but I hang out here and there
isn't any traffic there.)
(Tim S. and Thorsten G. discuss Jaguar, true 64 bit machine
or a 'pretender'. (Pardon paraphrase).)

I am glad Mr. Seufert mentions that the 64bitedness of a
game machine doesn't really mean much. A 32 bit RISC chip
sounds like pleeeeenty to me. And these game machines today
have multiple processors, like the A8. Some for video and
some for digital sound, the machines are fantastic. But, the
N64 hype about 64 bits sorta gets to a Saturn owner, I'd
like to say it's a bunch of BS. I'm sure the N64 and PX are
the 'premier' game machines today and undoubtably the two
will battle it out. I'm afraid I have a 'not in the running'
Saturn as far as hype goes. But as far as true quality of
games, with fantastic sound and graphics, the Saturn is as
good as a PX or N64, but I can't compare them directly.
It's sorta where I've been before, liking the A8 when the
general concensus was it was a 'game machine' and inferior
to C64 and Apple][. Again, my feelings are 'BS', the A8 was
advanced for its time. S. Jobs left Atari with enough
knowlege to put together an inferr pduct and market it
fast, but the A8 was far ahead of the][for me.
I think the problem with the N64 is gonna be the cart only
concept. Carts, especially these whopping ones, 100s of
megabytes, are gonna be expensive, while the Saturn and PX
will be able to produce 100s of megabyte software at a
fraction of the cost of N64 software. Off topic, but there
is the same feeling about my Saturn I had about my A8.

I have a hard drive full of infected files. (that is before they decided
to start swapping sector map sectors on the files in the drive).

But I'm certainly not going to dig it out to look at it. Although I'm sure
they will disassemble quite poorly. Ya gotta love multiple loader pattern
shifting viri.

I tend to doubt that your program will be able to stop a virus such as
these. By swaping some of the data in the sector maps around they can
prepend themselves to a file just as easily as apend. (I know prepend =
appel)

Anyhow. Good luck on your virus hunt. I hope you don't get bit too hard.

Bill

(James R. Gilbert) wrote:

cb541@cleveland.Freenet.Edu (James R. Gilbert)

>the umich archive is very hard to access (or was). It

I don't know what Bill's been up to, but here's my friendly reminder that UMich
has always been very easy to access, via a whole bunch of methods:

from the FAQ:

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.ed
u/atari/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:

ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Someone here recently mentioned a custom Atari IC, one of those glorious "CO" parts, that was actually responsible for controlling the banking in the XE machines. Like an idiot, I didn't save the message and am now forced to query the group for more info.

It was mentioned that this chip did the decode and select for the banks and not the Freddie chip as most would suspect. My question is, what was that part number and was it the small 16 or 18 pin "CO" chip that sits very close to the memory in the 130XE.

I ask because I have an XEGM and I'd like to see if it's in there and if so, I'd of course line to pop some 44256's in place of the 4464's in there among other things.

Is this the chip that makes possible ANTIC banking modes as are available on the 130XE? Any specs or pinouts for said chip, or perhaps a pointer to a reference manual?

Whilst reading the usual rubbish I find here, William Moeller wrote something
interesting to All about Page 6:

Hello William,

WM> I know the U.K. has expensive postal rates....I am talking about the

Okay, I was unclear about that from your message.

WM> quid U.K. customers pay. Are you trying to tell me the weight of a disk
WM> increases the postage cost by 7 pounds by Surface and 9 pounds by

On the face of it, it does seem steep, I agree. Not having a complete postal
rates chart to hand, it's difficult to say. The info I *do* have tops out at
60g (below the weight of a disk/mag subscription). Something of that weight
shipped to the Americas by air costs UKP1.30, but that assumes it can be posted
at letter rates. Something I doubt.

WM> The extra cost levied on overseas subscribers for disk subscriptions is
WM> not justified in my humble opinion.

It does state in the mag that overseas subscriptions costs reflect postal
costs. But I take on board your dismay.

WM> The cost SHOULD be the Magazine only surface overseas rate (or Air Mail
WM> rate) plus 10 quid, the same as a U.K. subscriber ....the cost of the
WM> Magazine only rate plus 10 quid.

No, because the prices are calculated on differing scales. On internal post,
the extra tenner is primarily for the cost of the disk, label & copying (it's
all done by hand, no bulk copying for Les & Sandy). Checking the total wieght
shows that the addition of a disk to UK subscribers adds nothing in postage.
The same can't be said for shipping overseas, where the additional 15 or so
grammes of the disk, label, etc. takes the cost disproportionately high, since
air mail works on 10g banding (I think), and internal posts seems to be on
about 40g bands.

WM> subscription, and overseas customers have to pay 17 quid over and above
WM> the magazine subscription for surface, and 19 quid over and above the
WM> magazine subscription for Air Mail?
WM> Please explain how this is justified.

Hopefully, what I said above goes some way to explaining. Basically, it's
weight. On air mail, (even surface, overseas) weight has an extortionate
effect on cost.

>> mistakes.
>> Mine was to to reply to your message, probably. :-)

WM> No it was not a mistake at all. I was only steamed at P6 for gouging on

Ah, that's a relief. :-))

WM> the final straw. Since I was not going to re subscribe, I did not bother
WM> to correct them. I had considered getting just the Magazine

IMO, that was probably a poor choice. I'd have responded anyway, pointing out their error, so people didn't go around labouring under a misapprehension. Still, your decision is understandable, given the circumstances under which it was made.

WM> subscription, but thought to myself "if I don't have the disk to go with
WM> the Magazine, why bother?" 10 Pounds extra seemed fair for a disk

I used to find that I learned a lot more when I had to type the listings in, especially when none of the magazines used checksum routines. Just trying to get the darned thing to run could be an education. Of course, at the time I had no money for disk subs anyway. Now, I take the lazy way out, and get the disk. :-)

In the U.S. the term "penny" is widely used for 1 cent.
We even have a common cliche saying... "A penny saved is a penny
earned." Although I happen to like the saying... "A penny saved isn't
worth a dime."

Cheers,

Jon

1479. Atari 8 Bit Stuff for sale

Newsgroup: comp.sys.atari.8bit

Please let me know if you know of someone who may want the following Atari computer equipment:

1. An ATR 8000 Interface Unit (this is an interface like the Atari 850 that allows Atari computers to run CP/M operating system and programs like Wordstar and Dbase (these programs are included). These units are rare and hard to find. The ATR 8000 also will allow you to use other types of disk drives besides Atari drives.

2. Two (2) Shugart DD/DS Disk Drives (these work with the ATR 8000).

3. Two Memory boards (16K.)

4. An Atari 820 40 column printer.

5. An Atari 410 Data recorder (with tapes).

6. An Atari 400 keyboard.

7. Various manuals and books on Atari computers.

All these items are available for immediate sale for best offer. We will sell the items separately. If interested, please email a response to: moneyman@mindspring.com

Marco,

You don't need to build an SIO cable when you can buy them all over the place. Call B&C Computervisions 408-986-9960 and order them from Bruce, he stocks every type of Atari cable ever made.

Its called a Micronet and was sold by MPP, its a multiplexing unit, You can hook up to 8 Atari computers to it and they can share the same disk drives and printer. It was a nice little item, its still sold in a few places. It has a time out problem when more then 4 computers were using it at the same time. It was a nice idea for use on multi-line BBS's though.

Try B&C Computervisions for a copy of the ROM cart for the light pen, then check with Bob Puff at Computer Software Services (now its called New Age Electronics) in the 716 area code (I think Rochester, NY) and get his software to dump a ROM cart to disk.

Sorry Kurt,

the rumors are true, Mike Holman is on the Lamb in Pheonix, AR hidding out from several hundred people whom he took orders and never filled. I just recently flew out to Santa Cruz, CA to look through a storage space full of Atari equipment (apparently the guy hadn't paided his bills in quite sometime) and I found 144 boxes fill with ICD boxes, books and other crap, but no hardware at all and it had Mike Holmans address all over the place, even found an old bank book and family photos too.

-even if I change the file ext to ATR can anyone help?
-

RAINBOW must use ATR's of 92176 in length
OR XFD's of 92160 in length
You MUST only d/l from the "ATR" section, and ONLY those that are that
length.
"EXE'S" will NOT work.

Emulator authors, please relax this standard! Remember, actual Ataris
will work with ANY size disk up to $FFFF sectors under mydos and
spartados.......

Tony, you always beat me to answering the questions I know the answers to!

Markus, just a suggestion - please support ANY disk size image. Some of those bytes in the header of ATR's tell how big an image is - its just up to $FFFF sectors.
Makes it easier.
Also, I dont know if its isolated to me, but xlit17 wont run under win 95, gives "illegal instruction". I have the same problem with the CCs64 emulator. And I occasionally loose my keyboard when I exit xlit. (I think that was because I hadnt calibrated my joystick)

GREAT JOB! I love the sound!

I also have problems running XL-it17 starting it from Win95. My PC is a
Laptop with ESS ES 1888 sound system. It seems to be some problem with
detecting the soundcard. I get some Win-message about some illegal command.
If I disable the sound in the userinterface there is no problem. However,
if I start it from DOS and put "SET BLASTER=A220 I5 D0" in Autoexec.bat,
evrything works GREAT!

(The version 0.16 starts wery gently includung sound from Win95, byt the
userinterface hangs the computer)

/Christer

Doc,
Yes DOS Edit will do this. You hold down the [ALT] key and (with
```

num lock on) enter the character number (decimal) on the numeric key pad (not the numbers on the alpha pad). It works just fine. I do this all the time. It doesn't work on binary only files though and many if not most of the values aren't shown.

Al,
Unfortunately for me I have the parallel version of the Zip, but as
soon as I have enought time, I want to try SIO2PC or APE and use the
ZIP as the hard drive. I want to knoe how to set up 16MB .ATR/.XFD
image files for this. I figure I can also use PC Xformer with these
images as well.

The problem is not the schematic. It's that the connectors needed are no
longer available. It's much easier to buy the cables themselves from
companies like American Techna-Vision, Best Electronics, B&C
Computervisions, or any European source (sorry, I don't know of any
there.)

>Try APE, I think you'll be pleased with what it can do.
>
>Falcon

I think he's saying that the total-machine emulators, like XL-It, should
include facilities for using the PC's printer, modem, etc. Of all the
full-machine emulators around, only XFormer has attempted this and doesn't
quite cut it. The printer works fairly well, but not the modem. Sure,
A.P.E. and SIO2PC software can send stuff to the PC's printer and/or
modem, but they're not emulating a full Atari, only its peripherals.

The question comes down to what a full-machine emulator will be used for
-- if it's for playing games, the printer/modem acces becomes moot in most
cases. If you really want an emulated Atari with a printer and a modem
for apps, portable or not, you'd probably be in the minority like me.
Because we're in the minority, I doubt that the other emulator developers
will make printer/modem access a priority very soon.

1507. Re: CES 1984 Atari & Sierra News ?

>was ever made for the Atari. Another fun one that I only saw on the
>Commodore was Little Computer People. I always wondered why they didn't
>put them out for both platforms?

That was about the time when the C-64 was all the rage. When putting
out new software, a C-64 version was almost manditory. When they ported
software, the order of systems was C-64, Apple II, IBM PC, Atari 8-bit.
Many companies no longer bothered with 8-bit ports, claiming it wasn't
profitable, or there was too much piracy. When the ST came out, it was
higher on the priority list than the 8-bit. Activision produced an ST
version of Little Computer People, for example.

Hallo !
MMU (2) of XE-Computers

Atari-filed servive manual says:
Itï¿½s Chip U34 (CO 25953) (Multiplexer according to SAMS computerfacts),
16 pins (but there is a socket for 20)
Can (!) be replaced by an PAL 16L8, but onother chip (U 35) is need.
Idonï¿½t know, what this chip will do, but mayby someone find it out.
Itï¿½s an 74 LS 958.

Here the Pinouts for both:
U34
1...A14
2...A15
3...PB2 (PIA)
4...PB3 (PIA)
5...PB4 (PIA)
6...not named, PIN 35 of FREDDIE, named CAS|
7...GND
8...GND
9...GND
10...GND
11...MHALT, PIN 13 of U 35
12...NC
13...HALT|
14...CASBANK
15...CASMAIN
16...FA14, PIN 23 of Freddie
17...FA15, PIN 24 of Freddie
18...PB5 (PIA)
19...PHI2 (O2)
20...+5V

U35
1...HALT|
2...GND
3...GND
4...GND
5...GND
6...GND
7...GND
8...GND
9...BPHI2 (BO2)
10...NC
11...NC

12...NC
13...MHALT,PIN 11 of U 34
14...+5V

Note, that there are different Pinouts of U35 by ATARI or SAMS
Computerfacts. But only matters the GND and NC PINs.

Hope, this helps a little bit, Matt

I am pretty sure that Rainbow emulates Graphics 8 artifacting correctly.
There are two versions of Lode Runner in Yogi's archive; one uses Gr. 8
while the other uses a mode with more colors. Both versions look correct
on Rainbow.

If all this is true, despite all the flame wars about duplicating old software, and despite the fact that I generally discourage lawbreaking, I have *zero* moral problems with anyone choosing to disregard copyrights owned by FTe.

Note the *if*--that's quite important. Too bad it's not easy to pirate hardware... :)

Marcus, I haven't really put the emulator through its paces, but the sound is fantastic! Getting the emulator to check for the the blaster environment statement in the autoexec.bat file and then adjusting to it was a stroke of sheer genious!

I recall a conversation with Darek Mihocka in which I described the problems his emulator (3.3a at the time and not fixed since then) was giving me with my AWE-32 sound card. Darek had never heard of the AWE-32. XL-It 0.17 makes it sound great, without any of the problems that I had with other emulators.

On another note, do you feel it's important for an Atari emulator to be able to access the PC's modem and/or printer? Would you consider building that capability into a future version of XL-It? I'm asking because I believe that most emulator users are interested in games, while I'm in the minority (I'm interested in emulating apps!)

Once again, thanks for a great upgrade!

>Any wonder he's dropped the project and moved on? All you BETA testers
>should be paid by Itay for your efforts on 2.71. But did you register
>2.6?

Please don't take this as an attempt to start a war, but when was the last time you registered something that was incomplete?

In my case, I never saw 2.6 -- I only heard about it. Most of my telecom work is done on my clone. I can be a big-shot and surf the Web all day, if I care to. I also had just pushed the idea of getting my fellow user group members on the Internet using their Ataris. If a product came out that could help a fellow Atari user group member, I would pass the info on. I got interested in 2.71 because of what it claimed to do, and I decided to try it. The process was frustrating, to say the least. Contributing to it was the fact that Itay was away for a few weeks when my initial message about the screen dump got to him, and he didn't answer promptly. That wasn't his fault, to be sure, but it didn't help much. Itay did mention that he was going to end development if he didn't get the needed registrations. I guess he got caught in the old Catch-22 (a product has problems so people don't register, then the lack of registration is discouraging enough to end the process of fixing the problems.) I liked what features did work, and I could only assume that previous versions introduced those features. But then I asked some of the people on the Fidonet National Echo to comment. Some of them are sysops/programmers and very astute, and they saw what they said were serious problems beyond what I saw as a user. Ditto sysop/programmer friends of mine in other areas.

At that point, I had to drop any interest in Ice-T because solving other problems in my life had to take precedence.

There ARE at least two sides to everything. There's also the problem, not really discussed at length on this ng, of when in its development a product should be released.

Something may be said for holding back release of a product, commercial or hobby, until it fulfills the wildest dreams of 98% of its projected audience. If that were the model to be followed, however, we'd never have

made progress as a civilization. On the other hand, premature release, whether accompanied by advance publicity or not, has a chilling effect on development and makes the audience cringe at further mention of the product, even if it has been improved 1000%. Corporations, with tremendous resources, can't always find the exact proper time for release. Microsoft has pulled some gigantic boners, in spite of their position. Hobbyists have it even tougher, and I do feel for them.

The situation is complicated by the fact that my system is not your testbed, or my neighbor's system, or the-guy-half-way-around-the-world's-system. But everyone, developer or end-user, can lose tolerance at some cut-off point that may be determined by the nature of the product or by factors not even related to that product.

Umm, most of the software houses that said that they stopped producing software for the Atari because of piracy were full of crap. Piracy was happening on all the machines... Good old Trip Hawkins, the man who said that no 8-bit owners have disk drives.

Also you seem to be a bit out of touch with reality. The Atari8 series is commercially dead. It 'officially' died many moons ago. I realize that there are still a handful of dealers and indies, which I think is great, but hardly makes the machine commercially viable. Without that archive many of the programs I *paid* for years ago would be lost to me now. Do you think that If I mailed my Atari8 EA software back to EA asking for replacements that I would get them?

>
> Jim Treber

And I had a version of Winter Games too.. ibeleive it was called Winter
Olympics and I don't think it was done by Epyx... Gemstone Healer? I
remember a Gemstone Warrior.. but a Healer. As for Kung Fu Master, I
know there was a C64 version, never saw an 8bit version. The only 8bit
fighting games I had were Karate Champ and karateka. Someone told me
there were Uk versions of Double Dragon and other fighting games...

(Oh yeah there was also Fight Night and Bop N Wrestle.. 2 very slow
fighting games (Bop N Wrestle were murder, unless you had 128k or better.)
Even on my 256k Xl Bop N Wrestle was too slow..)

Anybody know if there was ever a better wrestling game for the 8bit? I
think another boxing game came out too, but I forget the name) I haven;t
powered up an Atari 8bit since June 1994 when I took my faithful BBS off

line forever...

:) <grin>

Bet you think fund-holding, pension opt-out, assisted places, six quid
prescriptions and ... all those other bullshit ideas are good too?

Rhetorical. Please don't bother to bore me to an early death by
replying.

(And with apologies for going 'off-topic' for a half dozen lines.)

Page 6/NAU is possibly the most shitty magazine ever published for the
8-bit community yet it was ceaseless in its assertion that it was the
best. Page after page (after page) of f***ing whining and whinging
written by an editor/publisher whose only interest (despite constant
affirmations to the contrary) was to make money (hence the doomed
newsstand launch, stupid renaming, ST spin-off pages etc).

And what about those god-awful contributors whose only other interests
in life were probably strangling animals, golf and masturbating?

If you want to know what a good 8-bit magazine is read back issues of
Antic or Analog or subscribe to Atari Classics. This latter may be
pompous but it's rarely inaccurate. Also the recently revamped LACE
magazine is a golden vein just waiting to be mined.

Cheers
Mark

I agree completely. Then again a dead goat emulates the Atari 8 bits better
than Xformer does.

XL-it is looking very good, and sounding very good now too! Excellent work
Markus! My biggest grouch would be that weird sprite priority problem now.

Your argument still doesn't hold logically. B&C may have a few early eighties games for sale in cartridge form, (has its own intrinsic collectors' value) but the archive is the only source for many others. Besides, would you trust the reliability of a 17 year old floppy disk? No, I think you'd want to make a back-up, get out the Happy or Archiver drive! As far as newer software, companies currently (as in right now) developing software for the eight bit such as Taquart and Tight in Poland have chosen to put up some of their own older software up for downloading. They are certainly entitled to do so. Their FTP site rivals thatof Yogi. There's no retailer that I know of that stocks 2000+ different titles for the eight bit.
I myself have literally spent hundreds of dollars this past year alone buying hardware, and yes software from the above mentioned retailers. I am willing to bet that the largest share of their sales comes from hardware. Can't pirate that. Or can we?!! Hope we don't start picking on emulator developers next!

So far it's the best 8-bit emulator I've seen. I once reported a visual glitch in Archon 2 to Chris Lam, but when I ran that disk image on a physical 800XL it turned out that the real Atari had the glitch too!

There are of course a large number of things it doesn't run. Full compatability is really hard. But it tends to run most of the big-name games.

I don't think this is possible. The trigger lines are handled in a
different way from the four data lines. You will probably have to use a
second joystick port on the Atari.

> (Even the older ones. You simple have to patch them for that purpose).
>

you don't need a second pokey, it's much easier to make an
ATARI have stereo sound:
As fas as I remember pokey has a sound output pin for every
sound channel. Usually these pins are connected to each other,
and the composed signal is given to the HF-modulator.

You have to connect your stereo amplifyer directly to the specific
pins of POKEY and have brilliant stereo sound.

I did this 12?? years ago with my ATARI 400.

Harald

P.S. Where do you want to insert the second pokey????

Is that the reason why the megaimages don't work any more??

Furthermore it has problems with Rescue on Fractulus. You can't press
any keys on the keyboard, so you can't land etc.

Harald

P.S. Tremendous Emulator!!!

: Doc,
: Yes DOS Edit will do this. You hold down the [ALT] key and (with
: num lock on) enter the character number (decimal) on the numeric key
: pad (not the numbers on the alpha pad). It works just fine. I do this
: all the time. It doesn't work on binary only files though and many if
: not most of the values aren't shown.

I'm not sure what you mean.
All files are "binary" under MS-DOS.It's like the Atari in that respect.
Only devices can be in "text" mode,not files on a disk.

I can understand the return key not showing a musical note,but why would
any other character besides CR,LF,NUL and $FF have any problem?
Oh,even though MS-DOS ignores ^Zs in files,some programmes will stop
reading the file at that point.

Well the "binary download" in Ice-T is X-modem,so you might as well say
that there's no download either.
Remember that X-modem is made for CP/M,where all files are multiples of
128 bytes long.So if you download a 100 byte file,you get 100 bytes plus
28 bytes of ^Zs.Use BobTerm's Y-modem.
I've tested it and it seems to work.But if you upload,it only works with
SpartaDOS disks,since BobTerm has no way of knowing how big a Atari DOS
file is.(without reading through the whole thing)
Kermit65 is another (SLOW!) solution.

: is the best terminal software ever made for the 8-bit in that it
: has pull down menus and is almost easyer to use than a Mouse based
: software/TERM. Push a few buttons and Wala! The bigest feature

I find Ice-T's menus incredibly anoying.FlickerTerm is much simpler and
easier to control.

: of the terminal program is the 80colomns minus the hardware chips..
: 8-bit has a 40 colomn output..ITAY almost has
: a WINDOWS 95 desktop for the 8-bit..I mean it reflects it pretty close or,
: even better, closer to a MAC desktop. If he had published this during

I know it's a bit akward,but I wouldn't say that it's that BAD!
It is the best term programme for viewing VT100 movies.

: the 8-bit years...he would have made a ton of money..but, for us 8-bit
: left-over users..it is a GIFT..passed down by time.. an excellent programing
: skills..

Still,a BobTerm type interface would've been better.Ice-T's menus are
anoying,much like PC ones.With BobTerm,you don't have to constantly use
the arrow keys.He could've at least have assigned the options numbers if
he couldn't think up letters.
At least he could've made the left&right arrows work,like in PC's Telemate.

Kevin S. Moore (fu511@cleveland.Freenet.Edu) wrote:

: Now wait..wait..Icet2.6 has no problem with dumping what is on the
: screen to my EPSON printer. I have it excuting under Sparta DOS and

The problem with Ice-T and other graphical programmes is that you can't
just use something like the G: handler.
G: would have no way of knowing what character set you were using,and I
doubt that it would understand 4-bit characters.
There needs to be a G: device (like P9: on the Black Box) that looks at
the CURRENT character-set.And if the programme is something like Ice-T,
it can use a XIO to tell G: (or whatever it gets called) where the
character set is,and how many bits wide it is.
(since we wouldn't just want to limit ourselves ot 4 or 8,since there are
64-column drivers and such)

: with a PR: connector. Everthing works fine. Only 2.7..has the
: Printer Problem...I use it all the time to call the library and Freenet.

That was rather the point;not to upgrade.

: I have even surfed the WEB..sent E-Mail and recieved E-mail from
: all over the world. ...

More and more systems only let you log in with a special programme called
SLIP or CSLIP or PPP.And systems like America Online needs a really
special programme that only works with them.
(PPP and (C)SLIP are common on UNIX machines)
Sad really.It means that all the USENET programmes like uudecode and rn
and mail have to be on your computer to download files,read news and
mail,respectivly.The SLIP/PPP handler is just a high-level RS232 handler.

: AND I CAN DO IT WITH AN ATARI...8-bit. I have DL's some excellent games
: from YOGI'S Web sight..which is still active..but the way..but it is
: 2.7 gives you that..but I suspect 2.6 would do fine using X-Modem
: downloading.. just requires a bit more typing. I still get alot of use

uh,don't download COM files with X-modem.Many won't work since X-modem
puts garbage at the end of a file.ARC files should work,though you'll get
a error at the end of the file.(with SPartaDOS X's ARC,I dunno about Bob
Puff's version)

: out of the 8-bit even though I have a stupid WINDOWSmachine...which
: gets stupid'er by the Mega Byte.

I only ever used MS-DOS.
Ever wonder why it's called "DOS" when it's a OS?

Well that's because devices can't take filenames under CP/M,so DOS has to
be hacked into the OS.
When MS-DOS was born,it was really a rip-off of CP/M and inherited that
"feature".
Originally it was called QDOS,which stood for "Quick and Dirty OS".
This became 86-DOs and then MS-DOS and wound up finally as just "DOS" on
the IBMs.
(but you're probably using MS-DOS,not IBM's DOS)

kmosiejc@lcp.com wrote:
: > asharkis@aol.com writes:

: > Come to think of it. Bob Puff fixed it through
: > software, so it must have been an early Bobterm.
:
: But Bob also fixed the problem with MIOs not working at
: 19.2 reliably with a software "fix". And that wasn't BobTerm
: that was at fault. So just because he "fixed" it doesn't mean
: that he didn't just find a way to work around faulty hardware.

The handler itself does most of the work regarding actual input/output.
So the problem's probably in there,though I'm no ICD expert.

Also,I noticed in the programming manual for the P:R:C,that it doesn't
mention one of the bytes returned by the GetStatus CIO command.
This would be the high byte of the number of bytes in the input buffer.
Since the P:R:C handler doesn't allow you to set you own (bigger) buffer,
there will never be more than 255 bytes waiting.But it should at least say
that the byte is used on other interfaces as the buffer input high-byte.
I can only hope that this byte is always set to zero!

grin You've just got it in for 'em ain't ya?
The technical content of the mag was (is) never as high as most other's, but neither was (is) it as flash or noisy. I enjoy reading it, you don't, on that I think we can agree =). The fact it is still out there and has been there for so long says something about it.
Page 6's authors/editors don't tend to be experts in any particular subject, and have been known to get things wrong (quite frequently). But they are dedicated, and die hard 8-bitters, not in it just for the money, on that point we disagree.

Stupid renaming?
When I first walked into a newsagent looking for an Atari 8-bit mag I found one: Atari User (UK). Unbeknown to me Page 6 was sitting right next to it, but amidst all the other computing mags it didn't stand out. So I bought Atari User. Only after seeing the advert in A.U. and going back to the newsagent did I find Page 6. Had it had the word Atari in its title I would have bought them both first time round.

I beleive that the last time I tried tracking down this flake, I discovered that Mike HOLMAN was his TRUE name, and that HOHMAN was either an accidental or purpose mis-spelling. However, also I might add, that when I attempted to track him down, someone in Brookings, OR. DID in fact give me his CORRECT phone number. The address listed though does not correspond with the person whom I contacted about 10 months ago. Their address as I recall was on STAR ROUTE.

So Curt, what was the disposition of the stuff in the storage locker? Did you get it or ??

That is what Xformer does (About the ONLY thing xformer does right!)
APE does it also, through the PC mirror function. You still need Atari
dos loaded. In this case, it's the Atari that needs the Image. (To
boot, etc. Unless you want to re write the OS to include PC mirror in
it!)

the
-atari 8bit community including yourself.
-
Good. You got my point!

Let me explain it ONE MORE TIME (stupid), SINCE YOU OBVIOUSLY DID NOT READ NOR UNDERSTAND WHAT THE OTHER MESSAGES SAID.

I DON'T CARE and DID NOT care in the 1980's when the ATARI WAS A VIABLE product if I pirated stuff or not. I DON'T CARE NOW that the ATARI is not a viable product. THE ONLY REASON that I re-collected all the software that I did was because I LIKE TO COLLECT SOFTWARE.
I NEVER denied that I wasn't a pirate. Since you seem to have a problem reading and understanding replies, I feel it is necessary to explain this in plain text to you.

If I am hurting the remaining 8 bit "scene", OH WELL! Am I preventing you from buying or selling Atari parts, if that's the business you are engaged in?

The opinions expressed in OTHER people's replies are not necessarily my own. The reason the archive is there is because the similar archive for other platforms exist, and there should be one for atari. The same reasoning also applies to those platforms - they are all pirated software.

Why don't you just come out and say "It's wrong to pirate software". I'm sure you've never done it, or have repented and realized that it would help destroy a platform you loved, so stopped. Is that what you are saying?

If you find it offensive that the archive is there, thats tough. But don't put words in my mouth that justify why it's there. It is there because it is there, and that's it.

People adding to this thread, please clearly mark which is MY reply, and your additions. I don't want this guy misquoting me.

Many, many years ago I read an interview with some guy from Lucasfilm in a
German computer magazine and he said that the graphics in R.o.F. aren't
real fractals. They just look like it.

Factor 5 programmed a similar engine for the intro of the Amiga version of
BallBlazer (MasterBlazer). Looks like they abandoned development of the
Fractalus port, though. :(

Unfortunately, this has caused me to delete the link to "Yogi's Jellystone Park" from the Atari web site I maintain. I didn't realize it was a den of piracy - and never would have if this blatant "scr*w you" article hadn't been posted, since I don't personally check every link submitted.

Does anyone have any /legitimate/ 8-bit Web sites or ftp archives I can link to?

I have been one of the main beta testers for Itay Chamiel's Ice-T for sometime and would like to take the time here and defend Ice-T and thank Itay.

First, how many of you here are actually using your Atari 8-bit to read this newsgroup?? Now fess up!

My main computer at home continues to be my Atari 8-bit and I give Itay Chamiel the credit for having kept my 8-bit current and alive on the Net because of Ice-T.

I have used the 0.0 original version, various 0.x versions, the 1.0 version, and various versions of 2.x. I currently use version 2.71 of Ice-T XE which is the latest release.

The only really major utility "feature" which does not work properly in version 2.7 and 2.71 is the print dump for the screen. It does works fine under 2.6.

Version 2.71 was a maintenance release for version 2.7. Later versions up through version 3.0 were planned but there just were not many paid registrations (even though a few here have recently sent in their registrations).

I literally use version 2.71 almost all of the time. I find it to be a truly superb piece of work by Itay. And Itay truly listened to us diehard 8-bitters. Many, many of the features and upgrades were the result of feedback by us real users.

Is it perfect? No, but very close. But what else really compares? The only thing even close is FlickerTerm 80 (currently at the 0.51 release) and I just have not gotten used to the flicker (though it is a bit faster than Ice-T, but not by much).

I have also been a paid registered user for version 1.0 and now for version 2.x.

There are some things to be careful off - It is important that one use the correct handler for the P:R:C connection (the screaming q problem). Some of the 850 handlers do not work properly with the P:R:C and Ice-T. There is also the issue of your modem and whether or not the modem is set for hardware or software flow control.

Sure it would be nice to have xmodem, ymodem, zmodem upload, too, and macros and enhanced dialing capability.

But this program is still great!

If you are an Atari 8-bitter, than the closest thing in the PC world is ProComm, and I like Ice-T better!

Dial-up shell is very powerful, indeed, and so I make extensive use of all the shell utilities and binaries available to me in the Unix arena.

Lynx for WWW browsing, uudecode for sending files through e-mail or as attachments in Pine, pico/emacs as an editor, Pine or elm as my mailtool, and on and on.

With VT100 emulation, and IBM ANSI emulation, I can do just about everything that everybody else does except for fancy graphics and pointing and clicking with the mouse.

Version 2.71 goes several better than version 2.6 (other than the screen dump to printer).

There is boldface text, blink, and fine scroll available. Boldface works great when browsing with Lynx as all the hotlinks stand out from the rest of the text. Presentation is superb. There is now Zmodem download plus xmodem and ymodem and ymodem batch. Ice-T 2.71 works great with SpartaDOS too and correctly reads directory listings. I could go on and on.

Ice-T 2.71 XE is extremely powerful, elegant, and a real work of engineering art on the Atari 8-bit.

Ice-T is a real display of what is possible from the Atari 8-bit. Itay also had additional features and functions planned for Ice-T in later releases.

Thank you Itay. And thank you for partnering with us testers and users in creating one of the finest Atari 8-bit telecommunication programs available.

You can load EXE type files directly from the PC Mirror of APE, using your
DOS of choice (Spartados X included), regardless of where they are on your PC.
They can be on CD-Rom, floppy, etc.

>I KNOW he's registered.) and I'll post the results.

:) Yes, I'm also one of the handful who paid the shareware fee. Ice-T happens to be my favorite app for the 8-bit, I run it more than anything else (under SDX 4.22).

However, I'm posting again because I must eat my words. I tried the print screen function and sure enough, while it worked in release 2.6, it doesn't work in 2.7 or 2.71.

Obviously I'm not too bothered by it.

I try to keep a complete set in the FAQ..

This thread clearly isn't going anywhere, but let me make one other little
point. B&C may be the most prominent, but there are quite a few other
commercial sources for 8-bit Atari software. Video-61, Evangelo's,
Micro-Discount, East Hartford Computer, Games+, More Than Games... these ring a
bell with anybody?

Whether a title is listed in B&C's last catalog is hardly the last word on
whether it's available commercially.

Plus, almost anything can be had legitimately on the used market, with a little
patience.

I knew I was in trouble when I couldn't beat the 4th level of CHESS!, a program published in Compute! magazine Dec.84. To see how Kasperov beat both Deep Thought and Deep Blue is simple amazing.

True. I can't get M.U.L.E. to run with my dead goat though.

>XL-it is looking very good, and sounding very good now too! Excellent work
>Markus! My biggest grouch would be that weird sprite priority problem now.

That and for some reason in Mountain King you fall right through the
floor. (Collision Detect problem?)

XL-it is great for 95% of the software, and Pokey seems to run the rest
that XL-it doesn't (Now if Mike would just add Fries' Pokey emulation)

I played XL-it for several hours the other night just to enjoy the sound
and music.

Source record: 75859

Hi,

I just got the new xlit 1.7 and I think it is great! The sound is just about perfect. One thing that I cannot figure out. I cannot get any of the large archives from Yogi's site to work. They worked fine with 1.6 using menu.atr in d1: and games00x.atr in d2. All I get now is garbage on the screen where the games normaly are!
Any info would be great.

Anyone get those lucasfilm games to work yet? (koronis rift/edolin) or how about Karateka? Karateka seems to work ok with Rainbow. But I like xlit MUCH better.

Thanks

Jerry

1576. ATR8000 woes!

Hi there.

I'm still having trouble with my ATR8000 and Atari 800. The ATR is a 64k model with a Tandon dsdd drive as the first drive and a tandon ss/dd drive as the second drive, and yes the drives are configured properly! The atari is an 800 with 48k of ram. I've gone over the configuration, hardware and software several times and nothing seems wrong. However the computer will not boot from any drive connected through the ATR's drive port.

I'm reposting an inquiry in hopes that any other ATR's may have suggestions. Of the few replies I've recieved, all contained errors or misinformation. Does anyone out there know the ins and outs of the ATR beyond the obvious?

>Like you said, we're pirates. Sorry.
>

As usual your line of "reasoning" is bogus. You claim to archive
software for the sake of the remaining 8bit software, yet you do not make
any shareware/pd stuff available. Also many of the other sites you
allude to, most are NOT pirate sites. As for you're claim that there are
no 8bit or ST sites, that is absolute bullshit of the lowest order. Any
simple web search engine will turn up dozens of sites for both that do in
fact contain software, which in all the cases, except yours, is not pirated.

don't expect sympathy when the ISP you're on kicks your sorry backside
out. But then you'll just find another sucker to take you on. The
person you've been damaging the most with your blatant stupidity is the
atari 8bit community including yourself.

p.s. Don't bother coming back with your attempts at justifying your
position, face it, you don't have a position. I nor anyone else really
cares about you perticular form of greed.

Um, the XF551 is already a double sided drive. If you format a disk double
sided, it will read both sides as one large disk.

with

Unfortunately, both rainbow 95 and xlit have removed the compatibility
from their OS's when they went to new revisions.
The atari OS will support any # of sectors up to $FFFF; since APE will
pass the sec # to the OS properly, the emulators should too.
Seems like it should be a simple fix.
(But I'm not an emulator author, so I dont know!)
Until then, maybe Ivan Mak will write us a progam to insert all the
binaries automatically into ATR's with boot sector loaders?

Serial I/O cables (13 Pin) as used between the 800XL and 1050 disk drive are available from my company, American Techna-Vision for $1.50 ea. or (10) for $10.00. Compare our price anywhere. Add $6.00 for shipping/handling. (Shipping somewhat higher to Italy!), MasterCard/Visa welcome. Our company was established in 1973. Contact us at: American Techna-Vision, 15338 Inverness St., San Leandro, Ca. 94579 Phone 510-352-3787

PS: Broken pins on your equipment? The unusual 13 pin pc mounted connector is available for $4.50 ea. - Ralph

Sapphire,
Actually, the ZIP drive is rather fast for a paralled device. The
IDE or SCSI versions are as fas as most really good hard drives. SIO2PC
shouldn't have any problem with the ZIP, even the parallel version.

If you're still interested, email me. I have both.
I also have the manuals of LOGO.
I bought the program years ago ... in that time I was very interested
in LOGO. But it's slow. Even on the ATARI ST it's slow.
I even did type in the example from the manual.
But for kids, I think it's great because it teaches how to program
properly, what certainly cannot be said of BASIC.

I am selling my Atari Lynx and the following games and accessories:

APB
BLOCKOUT
BATMAN RETURNS
BLUE LIGHTNING
CALIFORNIA GAMES
CHECKERED FLAG
CHIPS CHALLENGE
ELECTROCOP
GATES OF ZENDOCON
GAUNTLET
HARD DRIVIN
HYDRA
KLAX
MS PACMAN
PAPERBOY
PINBALL JAM
PIT FIGHTER
ROADBLASTERS
ROBOSQUASH
RYGAR
S.T.U.N. RUNNER
SHADOW OF THE BEAST
SHANGHAI
TODD IN SLIME WORLD
STEEL TALONS
VIKING CHILD
WARBIRDS
XENOPHOBE
ZARLOR MERCENARY

AC Adapter
Car Adapter
Deluxe Carrying Case

Bid High to make sure of recieving games! I will knock down price for people who buy more!!

To check on current bids, check out my page:
http://msm.byu.edu/complab/joshuam/lynx.htm

Bids and questions to: 0jmorrel@msmlab.byu.edu

The Lynx II comes with the Original box. All games come with Boxes and Manuals. I am conducting an auction, so the highest bidder wins. Bidder will send me a money order for shipping and merchandise before items are shipped.

[Image]
Welcome to my Atari Lynx Auction page!!
I am currently conducting an auction of the following Atari Lynx items. I will post all bids daily, so keep checking my page often!!
All games come with boxes and manuals. Here are the games:

APB $5.00
BLOCKOUT$5.00
BATMAN RETURNS$5.00
BLUE LIGHTNING$5.00
CALIFORNIA GAMES$5.00
CHECKERED FLAG$5.00
CHIPS CHALLENGE$5.00
ELECTROCOP$5.00
GATES OF ZENDOCON$5.00
GAUNTLET$5.00
HARD DRIVIN$5.00
HYDRA$5.00
KLAX$5.00
MS PACMAN
PAPERBOY$5.00
PINBALL JAM$5.00
PIT FIGHTER$5.00
ROADBLASTERS$5.00
ROBOSQUASH$5.00
RYGAR$5.00
S.T.U.N. RUNNER$5.00
SHADOW OF THE BEAST$5.00
SHANGHAI$5.00
TODD IN SLIME WORLD$5.00
STEEL TALONS$5.00
VIKING CHILD$5.00
WARBIRDS$5.00
XENOPHOBE$5.00
ZARLOR MERCENARY$5.00

Check out Kurt Olson's Lynx page for reviews on each game!!
[Image]Click here!!!

I also have the following accessories for auction:

Lynx II$5.00
Deluxe carrying case$5.00
AC Adapter$5.00
Car Adapter$5.00

Bid high!! If you buy more, I will knock off some from the price!!

Please send all bids or questions to:
0jmorrel@msmlab.byu.edu

I reserve the right to make the final decision on selling price. I will calculate shipping, and buyer will send me a money order for shipping and equipment before they are shipped.

Why don't you print or save this info in case you need it in the future?

Hello Friends,
It's time to take full advantage of the online medium by having your photographs scanned today! Once your pictures are scanned into one of three formats (GIF, JPEG, or BMP) you can do many exciting things with them.

-You'll easily be able to attach them to emails and send them to people your chatting with online. No more having to try and explain what you look like!

-You can also use your photos in all kinds of fun projects: build web pages; design your own greeting cards; make personalized stationary,desktops, and screen savers- the list is endless!

- Scan pictures of yourself, your pet, your vacation, or whatever you choose!

Cyber Services will scan ANY photograph, drawing, magazine clipping, or other artwork to an image file, and email or US mail it (on disk) back to you within 24 hours of its receipt. (You must be able to receive file attachments to get your file(s) via email. Check with your ISP if your not sure.) PRIVACY & CONFIDENTIALITY ARE ASSURED. You'll also receive helpful technical tips on everything from renaming your file to saving time when sending it to people via email.

We scan all our images in 16.7 million colors for best quality. For just $1 extra we can enlarge or crop your photo, blur out a body part, or ad text (such as your name or email address).

Best of all, as a FREE GIFT to you (limited time only), IF YOU CHOOSE TO, we'll reserve you a FREE PAGE (or pages) in our "Internet Date-Site" (Now under construction!!!). This web site contains pages classified by local area and sexual preference. There's also a erotic image gallery (must be legal age to enter), and a "special interests" section. That's right, you can have your own page on the internet for just $4! (Note: You're responsible for answering your dog's email!) Your free page(s) will include any or all of the following: Your scanned photo(s) (You pick which ones- You can have some, none or all of your photos posted on your page), your email address with an icon visitors can click to send you mail, and a brief profile about you. We'll remove or modify your page, at your request, at anytime! When the "Date-Site" opens for business, you'll receive an email notifying you of the address of your personal web page. You can give the address to people and they can view it from any internet
connection! There are millions and millions of people on the internet.It's

time you start meeting them! (This service won't be free for long so act now!)

If you have any questions regarding our services, please call us at (541)744-5718.

Ordering Information:

Price: $4 for first scan, $3 for each additional scan
Extras: $1 each to add personalized information. (name/email)
$1 each to have image modified (enlarged, body part blurred, etc..)
$2 to have image files mailed to you on a floppy disk (IBM or MAC).
$1 credit card processing fee (Visa/Mastercard users only)

If you would like your photographs returned to you please include a self addressed stamped envelope. Otherwise they will be destroyed.

Order Form (PRINT OUT or COPY CLEARLY):

Name (optional):

Email Address or Screen name (PRINT CLEARLY! You must be able to receive file attachments. Otherwise include $2 for shipment on floppy disk.):

Address (optional unless having shipped on disk):

Phone number (optional):

File type (GIF, JPEG, or BMP. GIF recommended):

Extras (Exact personalized info you want printed on scan):

Disk Format (if having mailed on a floppy): IBM or MAC

Payment method (Cash, Check, Money Order, or Visa/Mastercard):
Please make checks payable to Cyber Services.

Credit Card # (credit card orders only):

Expiration date:
Don't forget to include the $1 processing fee if your paying with your credit card.

Do you want the FREE GIFT? Yes or No (circle one)
-Web Page(s) in our "Internet Date-Site" (under construction). You can have a page for yourself, a page for your car, and a page for your cat! Be sure to indicate where you want your page (F4M, M4F, F4F, F4M, or Couples) and which of the following info you want on your page (print clearly): State and Town, email address, year or birth, physical description, quote/message (under 30 words please). Please indicate which photos you want on your page (if any) if you don't want them all to be displayed. If your want your nude/erotic photos displayed in our erotic image gallery YOU MUST include a signed statement that your are over 18 years of age or older and give us

consent to display your nude/erotic photo, and be sure to tell us if your want it displayed with your info or anonymously.

Mail the above information and photos with payment to:

Cyber Services
2852 Willamette St. #131
Department 1
Eugene, OR 97405

Orders sent overnight will be given first priority.

Erotic/Nude photo's will be accepted providing everyone in them is of legal age.

Questions? Call (541)744-5718

Please help our small business grow by sharing this info with someone you think could use it.

Thank You!

>Curt

Bank selecting was in the PIA (parallel interface adaptor) which ran the joysticks. POkey did sound, serial, keyboard and paddles (plus the random number generator).

>
> The Doctor
While SLIP is merely an extension to serial exchange, PPP is a more complex form of data encapsulation. I spent a fair bit of time investigating a TCP/IP implementation for the 8-bit, and did go as far as to do a SLIP implementation; it fit on page 6 with over 200 bytes spare. Implementing TCP/IP properly on the 8-bit is likely feasible, but applications would be small. Or, better still, this sort of memory map could be used:
$C000-FFFF - OS ROM
$8000-BFFF - TCP/IP drivers and buffers
$4000-7FFF - user program
$0000-3FFF - low memory, DOS, drivers, screen RAM.

In that way, user programs could take advantage of the XL/XE banks.
But to be realistic, I don't see the A8 community doing such a project.
Though, the A8 internals (CIO esp) would make writing software somewhat easier. The A8 OS was wildly ahead of its time, with concepts like device independant i/o, graphics co-processors...

They better watchout as some people around here will manage to turn it
around that they are damaging the 8bit community....Sad isn`t it...

>Their FTP site rivals thatof Yogi. There's no retailer that I know of
>that stocks 2000+ different titles for the eight bit.

could you be so kind as to pass on the site address...Cheers...

> Hope we don't start picking on emulator developers next!
>
But they are the root of all evil :-)

Its so damn strange that I bet the poor old emulator guys who are
trying to supply the public with capable means to relive their old
memories will get a caining for their work. I think we best ask Markus
and the others to design an interface for their software so it runs
direct from the ORIGINAL floppy disk..I know lets call it a.....
Atari 800XL & 1050..yes..that will sort out the problem as their
emulators need to use NON original forms of that media....

This whole debate is getting too strung out. What Yogi is doing NOW is
superb, what he has done in the PAST is gone and done..Like it or not.
He himself has made it very known of his stance re the archive and has
said he will remove titles that people don`t want on there...

He collects...simple as that.....

What I or Yogi or any other "Hacker" has done is nothing to do with
the idea of a data bank of memories like almost every other machine.
So what do we do folks, ban the archives and let the 8bit just die a
very quick death or keep them and let the poor old public choose from
where they get their software from...What little software that still
is about that is.

My A8.
I played Chess Master 3000 on my ibm. It beat me in 11 moves. So, to comfort myself I got out Sargon III for my A8 and played that. It beat me on level one in 23 moves. Just goes to show you, the computers get better and better, but I'm not such a hot chess player any more.
I used to be a US Chess Federation 1400 player. I quit tournament chess when a 9 year old kid kept wiggling the table and beat me. I think he was a 1100, I really made his day.
Where's the Russians? They can beat this crap.

With the new features, many games work excellently with XL-it, making
it the best Atari 8bit emulator.

Now if only he can fix the missile sprites... (Sooooo many games don't
work because missles don't work... but those that don't use missile
sprites are excellent on this emulator.)

BTW: Do you know why collisions are off in River Raid? Because of
this the game is unplayable... :-((Then again it happens in all the
other emuls too.

1612. Re: Itay and IceT 2.71

Mr. Drake talked about how he really likes 'IceT'.
I've got feelings about IceT. Itay put up with my efforts to assist him in doing xmodem/zmodem crc for, I guess, the final version. It was more fun than when the hogs ate my baby brother. International collaboration on a software project. At one point, I sent Itay a 'archie' search for the name of a file that had xmodem crc source code in it. That archie search for that file (don't ask me the name) had locations in Japan, Australia, Germany, US, all over the place. Itay told me he couldn't ftp (I didn't want to tell him I did it thru e-mail.), so I got to help him with the project. Lots of fun.
But, no, I didn't send him any money. I asked him if he thought my 'contribution' was worth a registration and he sent me a busted (unarc reports crc errors) copy. I'm sure it got busted along the way. I've never seen it work or used it, but still consider myself a registered user. And I still don't have a working copy, although I've been told by Mr. Drake where to get one.
Ok, all you non-registered users, I think the time limit is up for your evaluation. Tme to register or erase it.

I guess I'm in the minority too. I want to have one that's as close
to a real 130XE as I can get. The host dos access would be great. It
would make life so much easier. Really, the dos is two parts. One being
the access to the drives with file access (put byte, get byte) and the
second are the utilities (DUP.SYS for lack of a better explanation). It
would seem to me that as long as the emulator could communicate with
the hard drive (which it does already), why not build a utility shell
that uses the MS-DOS (or other host DOS) programs to copy, move,

delete, undelete, rename, dir, and whatever else? All that would be needed then is a null-modem cable and term programs to move files to/from the real Atari drives.
Now, there's only one other thing I'd REALLY like to have ia a cart port so I can use SDX and BASIC XE. ISA/PCI card with a cart port (not even a full ECI/PBI) out the back. Could this be done? I guess there would have to be some sort of interface program to access the card and to place the data into the cart RAM space.

Tony,
If you're good with ASM, use it. It's fast and small. Otherwise,
use BASIC XL. There are some nice ML key words for loading, saving
binary data as well as data manipulation in BXL. Obviously this would
be a slower/larger way to go, but is can be done. You'll need the info
on the file types to do the conversions. I'll e-mail you a copy of a
program I wrote that does some conversions. Actually the manipulation
is from ColorView .R,.G,.B image files to a color printer, but you can
get some idea from that how to read/write that data.

>Guess you better let the emulator authors know that too, since they
>all link to it........

Not my job. If they happen on the info, fine. If not, and they don't
check, either, that's fine, too. However, /I/ know now, and in order to
maintain my legal status, I can't afford to have that link on my Web page.

>How would you feel if all these people (well, TWO so far, guess you're
>#3) all they did was say "You justify archive blah blah blah"
>I DON'T justify the archive. It just is. If you don't agree with what
>it's there for, that's FINE. Just don't use it, don't link to it,

I didn't ask for (nor did I expect) justification.

And, BTW, as a sometime software developer (I just re-obtained a couple of
8-bit machines recently, after losing my entire library and the hardware in
a breakup some years ago), I look at this as a learning experience. I
learned that, at least here, some of the cries of "I'm leaving becasue of
piracy" may have been prophetic rather than factual - but there's definitely
no chance that I can expect any future products to sell more than one copy.
Thus, there's no reason to release them at all. And if you doubt my ability
to support the machine, I refer you to Compute! for April 1984.

I have the following Computer components and cartridges for sale or trade.
If you are interested in something, please make me an offer in U.S. Funds
(buyer pays shipping). If you are looking to trade for something, the
listing of categories that I am interested in is at the end of this
message. All the equipment is in working condition, but without boxes
unless noted.

Hardware
-Atari 800XL With Power Supply, RF Cable
-Atari 600XL With Power Supply, RF Cable
-Atari 130XE With Power Supply
-Atari 1050 Disk Drive With Power Supply and connection cable
-Atari 1050 Disk Drive Without Power Supply
-Atari XF551 Disk Drive With Power Supply and connection cable
-Indus GT Disk Drive Without Power Supply and connection cable
-Atari XMM801 Printer With manual, Power Supply and Atari Writer Plus
-Atari 520 ST Missing all accesories
-Custom made Atari RGB to SONY XBR/XBR II Monitor Cable
-Custom made Atari Composite Video/Audio cable (standard RCA jacks)
-Atari XL/XE Paddles
-2x Suncom Tac Joysticks
-2x Wico Command Control Joysticks

Cartridges
Atari Writer
Basic
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Eastern Front (1941)
Final Legacy
Frogger
Miner 2049er
Missle Command
Ms. Pacman
Pac-Man
Pole Position
Qbert
Realsports Football
Robotron: 2084
Star Raiders
Tennis

Books and Manuals
-Atari 800XL Manual and conection guide
-Atari 1050 Manual
-Consumer's Guide "The Users Guide to the Atari"
-Compute's "Third book of Atari"
-Compute's "The Atari Basic Source Book"

Trades
As far as trades go, I am interested in the following categories...

Intellivision Rare Hardware and cartridges as well as Shrinkwrapped cartridges
Sears Tele-Games Shrinkwrapped Tele-Games (Intellivision) cartridges
Vectrex Hardware, Controllers and cartridges
Atari Lynx Hardware and cartridges
Mattel Electronics Handhelds (especially Backgammon and Spead Freak), Aquarius computer items, etc.
Coleco Handhelds and tabletops, Total Control 4 carts as well as some ColecoVision items
Microvision Hardware and cartridges

1622. Emulator Screen Captures?

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-14 00:00:00 UTC
From: postmaster@inficad.com
Message-ID: <5e3fjl$9u3@lana.zippo.com>
Source record: 75622

I'm fiddling around with a couple of emulators and trying to get a screen capture, without much success. How can one do a screen capture with an emulator? I am using PC-Xformer and XL-it! and have tried Screen Thief, Screen Capture and a half-dozen variations of the capture programs I have mentioned. Seems the TSR's (?) are disabled when using the emulators and one of them seems to have a memory conflict. Oh, BTW, I am using either DOS (MS, that is) and Windows 3.11

While we're on the subject, would any kind soul out there have a later version of GIFNCODE, by Jeff Potter? The only one I can find on the net is the original one.

For trade: Atari XEGS, with light gun, matching joystick, Bug Hunt cart.
All in great condition. Doesn't include the optional keyboard.

Stuff that I want to trade for---
Intellivision carts:
R ond ER stuff that I don't have
Atari Systems:
Jaguar hardware/software
400
65XE, 130XE
ST
Fairchild carts
Commodore plus/4 power supply
Intellivision II power supply
Magazines: Antic, ANALOG, Creative Computing, old Compute!s

postmaster@atarinet.portland.NO.SPAM.or.us (Rich Tietjens) wrote:

-Unfortunately, this has caused me to delete the link to "Yogi's
Jellystone
-Park" from the Atari web site I maintain. I didn't realize it was a
den of
-piracy - and never would have if this blatant "scr*w you" article
hadn't
-been posted, since I don't personally check every link submitted.
-
Guess you better let the emulator authors know that too, since they
all link to it........
How would you feel if all these people (well, TWO so far, guess you're
#3) all they did was say "You justify archive blah blah blah"
I DON'T justify the archive. It just is. If you don't agree with what
it's there for, that's FINE. Just don't use it, don't link to it,
don't tell people who ask it's there, etc. BUT, when people put words
in my mouth, and say that I said this and that I was doing this, etc.
THEN I have a problem with that.
At least you can't say that I'm not HONEST with myself.
The response to James Alexander became a "screw you" response only
because he persisted in quoting me when in fact he was quoting
responses, and came after 3 postings of much the same thing he was
complaining about. Unlike him, I understand what I read and THINK
before I reply. Most people get annoyed when they are misunderstood
and misquoted, so I wrote it as if he was a little boy being
disciplined, so he would understand it.
see ya,
That "den of piracy" Yogi

>ps. does anyone know how to code such flights over fractals???

Yep. Devise a fractal algorithm and include it in a sequence of
subroutines which provide the illusion of flight over a scrolling
landscape, thus...

```
If (coasting.over.landscape) then
determine.fractal.value
draw.screen
scroll
end
```

Easy, right?

Get outta here!

(Ok, you sucked me in, James.)
Current copyright law is intended to protect the creators or owners of the copyright. It is part of law that is intended to encourage and protect creativity. Current law also protects the consumers of copyrighted material by permitting archival of copyrighted material they own. As with so much tort and criminal law, the enforcement of the law depends a great deal on cases actually going to court and a judgement being rendered. It is my understanding that at least one case for copyright infringement was brought against a university student for putting up copyrighted software for download at the university internet site. It is also my understanding that this case LOST, because there is no way of knowing if the archive was used by people not owning the software. I've been trying to figure out 'copyright purists'. Analysis is rude, but I think the purists are more rude.
1. These purists take the moral high ground. It is a good feeling to put the finger of foo on somebody else. It is called a 'holier than thou' attitude.
2. Somehow, I've detected that these purists think they have a proprietary interest in the software. Twisted thinking makes them think the software is theirs.
I know some have gone to the extent to try to aid the 'forces of good' by notifying the SPA, notifying system administrators and reporting to any authority that will listen that a law is being broken. The fact is, no law is being broken.
So, not only is the premise that archival sites are a violation of copyright law false, the intent of copyright, to protect creative works and their owners, is being served by archiving the work.
I haven't seen one complaint by an owner of a copyright in what is now several years of copyright discussion. Bill Wilkinson, whom I'm sure would not want to be associated with my position, has mentioned that archival is a legitimate activity.
I haven't seen one vendor complain about copyright violations, either, even though they do not own the copyrights. Toad and American Technivision and Ben Smith, not B & C, have all posted messages here. So, who is complaining? The 'copyright purists', the holier than thou, the finger of foo, the people who think they own the copyrights themselves. Who has a right to archive

copyrighted material? Only institutions like the Boston Computer Society, libraries and individuals owning originals? I think anyone who takes the trouble is intitled to make an archive, by law, by custom, by intent of the copyright law, by common sense.

My thesis (that archival is within the copyright law) doesn't
hold water outside the context of the specific group csa8.
An archive of currently sold software for other platforms
would be detrimental to the interests of the copoyright
holder. But, I'm an old windbag and tired of the finger
pointing at A8 archive site. This thread should be split
up into comp.sys.copyright.purist, comp.sys.copyright.pirate
and a group just for me, comp.sys.copyright.windbag.

>Sound works great, but whenever I "exit" the emulator (either
>F7 or F8) when I go back to the emulator there's no sound.

Matt:

I'm having a slightly different problem with the sound. If I run the emulator from Win95 (I'm not using an AUTOEXEC.BAT) it wil only run if I disable the sound. Otherwise, it will error back to Windows. The only way I can get sound is if I run it in MS-DOS mode. I do have my BLASTER variable set correctly. I wonder if Ron's POKEY routines aren't totally compatible with 95.

drake thomas (phd posi) (tdrake1@umbc.edu) wrote:
: I have been one of the main beta testers for Itay Chamiel's Ice-T for
: sometime and would like to take the time here and defend Ice-T and thank
: Itay.

: First, how many of you here are actually using your Atari 8-bit to read
: this newsgroup?? Now fess up!

Well,me for one.I'm using FlickerTerm 80.
Ice-T couldn't keep up with Tin on a 2400bps modem with compression with a
RS232 speed of 9600.Maybe with the 850 and it's user-definable buffer,perhaps?

: My main computer at home continues to be my Atari 8-bit and I give Itay
: Chamiel the credit for having kept my 8-bit current and alive on the Net
: because of Ice-T.

I always felt that the Atari was viable.Kermit65 has flow control and can keep
up with any speed,provided the modem understands XOn/XOOF.
(if you're calling a BBS with a un-buffered modem,you merely need the BBS
to suport XON/XOFF.With a buffered modem,you need one as well)

: I have used the 0.0 original version, various 0.x versions, the 1.0
: version, and various versions of 2.x. I currently use version 2.71 of
: Ice-T XE which is the latest release.

: The only really major utility "feature" which does not work properly in
: version 2.7 and 2.71 is the print dump for the screen. It does works fine
: under 2.6.

: Version 2.71 was a maintenance release for version 2.7. Later versions up
: through version 3.0 were planned but there just were not many paid
: registrations (even though a few here have recently sent in their
: registrations).

I find programming for the use of making money quite strange.
I always made utility programmes to help me read strange text files,or to
copy files from a short-IRG tape,or whatever other need I had.
Getting a modem has obviously made that obsolete.There's shareware for all of
that.

: I literally use version 2.71 almost all of the time. I find it to be a
: truly superb piece of work by Itay. And Itay truly listened to us diehard
: 8-bitters. Many, many of the features and upgrades were the result of
: feedback by us real users.

: Is it perfect? No, but very close. But what else really compares? The only
: thing even close is FlickerTerm 80 (currently at the 0.51 release) and I

: just have not gotten used to the flicker (though it is a bit faster than
: Ice-T, but not by much).

I wonder what would happen if FT-80 implemented the indirectioal scrolling.
Not very useful for me since Tin never scrolls.
(this seems the norm for Curses oriented programmes)

: I have also been a paid registered user for version 1.0 and now for
: version 2.x.

: There are some things to be careful off - It is important that one use the
: correct handler for the P:R:C connection (the screaming q problem). Some
: of the 850 handlers do not work properly with the P:R:C and Ice-T. There

uh,you can use 850 handlers with the P:R:C?
Which handler do we use???

: is also the issue of your modem and whether or not the modem is set for
: hardware or software flow control.

Why don't programmes set the RTS line.I always have to run Kermit-65 each
time I turn on my computer.

: Sure it would be nice to have xmodem, ymodem, zmodem upload, too, and
: macros and enhanced dialing capability.

As I've said before,X-modem is useless for Atari files.

: But this program is still great!

If you need to view VT-100 movies or something.I know of one programme
that works better with Ice-T XL over FlickerTerm-80 v0.37.

: If you are an Atari 8-bitter, than the closest thing in the PC world is
: ProComm, and I like Ice-T better!

: Dial-up shell is very powerful, indeed, and so I make extensive use of all
: the shell utilities and binaries available to me in the Unix arena.

: Lynx for WWW browsing, uudecode for sending files through e-mail or as
: attachments in Pine, pico/emacs as an editor, Pine or elm as my mailtool,
: and on and on.

: With VT100 emulation, and IBM ANSI emulation, I can do just about
: everything that everybody else does except for fancy graphics and pointing
: and clicking with the mouse.

I'd like to find a ISP around here that provides a shell account!

: Version 2.71 goes several better than version 2.6 (other than the screen
: dump to printer).

: There is boldface text, blink, and fine scroll available. Boldface works
: great when browsing with Lynx as all the hotlinks stand out from the rest
: of the text. Presentation is superb. There is now Zmodem download plus
: xmodem and ymodem and ymodem batch. Ice-T 2.71 works great with SpartaDOS

: too and correctly reads directory listings. I could go on and on.

I can't Z-modem download (with Atarzee-modem) anymore since I'm at 2400
and the delay between the sender sending ZINIT and it responding to ZRPOS
causes a timeout.I wonder if Ice-T has the same problem.
(it's the huge buffers in the modem that cause this problem)

: Ice-T 2.71 XE is extremely powerful, elegant, and a real work of
: engineering art on the Atari 8-bit.

It is a creative programme.It takes advantage of the Atari's special features.
Most other programmes act like they are made for the Apple/IBM.
(is there a difference?)

1636. Schreiersgr&#65533;n Germany/English

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-14 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <5e1q6d$21o@widukind.fh-worms.de>
Source record: 75752

Hi to all,

This is the third time i send this text an i hope ervery German Atari 8 Bit User try`s to come to the fair.

In a few weeks is the second Schreiersgruen (Germany) fair for Atari 8 Bit computer on 15Th of March.

A year ago visited us about 70-80 freaks and all have been very happy. There have been KE-Soft , AMC , Kaisersoft, nearly all of the Ram (a ABBUC group)

- you could be a member of ABBUC, it`s costs 5DM per month inludes several magazines and disk`s. The only drawback is that it`s written in german.

many more that i could not name.

You will see some of Portronics devices :
Uni pad (a joypad with many funktions: Paddles ...)
the Power Pad (more funktions)
Stereo Blaster/Phaser (one couls be programmed , enhanced Sound support ...)
Herbert and his friends.

This show will Andreas Magenheimer (RaM 3) give you tips and hints for the Soft- and Hardware and bring you the AMC/PTC things.

Ke Soft will show his great range of games for the Atari 8 Bit. He brought us last year Superman 3 (Card), Bezerk (Card) and Tower Toppler (Card) three famous not official released card`s (Tower Toppler is a perfekt Nebulos Clone).

Kaisersoft (RaM 1) will sell their latest Polensoft:
from Rockman to Sexy Six, many from Mirage and other good game designers from Polen. You can also talk with him about the Top Mag and other Software and test the games. IF you buy some of them he wouldn`t be angry.

Highlander Soft will show you some new Hard- and Software and give you a little guide if you have problems. (RaM 2)
He can also help you if you have probs with the XFormer (ST).
He shows the new Atari 8 Bit AT-Bus Interface.

Helmut Weidner will make the whole fair and Markus Roemer will manage the places on the fair for people, who want to show or sell something.

We hope that you make a mark in your notebook for the Atari 8 Bit Fair.
If you want to visit us call the followign numbers:

Look at Marek Tomzyk`s Homepage Atari 8 Bit Resort, their is a link to the ABBUC Homepage.
http://rzstud1.rz.uni-karlsruhe.de/~un55/8bit.html

For informations about the fair call:

Helmut Weidner
Hauptstrasse 45
08485 Lengenfeld

Tel: 037606 2688

Markus Roemer
Schiefersteinstr. 10
55606 Kellenbach

Tel: 06765 96 00 46
FaX: 06765 96 00 47

bzw 0049 37606 ...
0049 -6765 ...

So jetzt noch eine Kurze Beschreibung des Weges ab Bayreuth:

Von Bayreuth die A9 in Richtung Hof
auf AB DR Bay. Vogtland in Richtung Zwickau (A 72)
A 72 bis Abfahrt Trenen

Dort auf der Hauptstrasse bleiben und einmal links, rechts abbiegend durch den Ort fahren. Nach dem Ortsausgang sind es ca. 1 Km bis Schreiergruen. Dort sucht man die Gaststaette Schreiersgruen. Ist man bei Trenen abgefahren, sollte es keine Probleme mehr geben, da der Ort (Schreiersgruen) sehr klein ist.

Ich sehe hoffentlich viele auf der Messe wieder, bitte erzaehlt es Freunden und Bekannten, die noch am XL/XE interessiert sind.

Grusz

King kong

:-)
HAR, RElaG, ABBUC, E. Puetz, J. Kpp, Grassel & Co., Steffan Dorndorf, Christp
Kirzanowski, AMC, AM, Sniegel, die Schreur`s, R. de Bry, Pavel Hammerschmidt,
KE, Mr. BEWE und alle aktiven/passiven Atari User ...

Both A.P.E. and SIO2PC software can shell to DOS.

The cart port idea is another story. .ATR files exist for many carts already, but I figure the SDX woudl be a special kind of challenge.

Guys?

: seem right for adding the disks.

Well, no, we were talking U.K. Pounds....regardless of the exchange rate. This might make sense if the disks were shipped separate, but, they are not. They are slipped into the A4 Magazine, and come in the envelope. The cost of shipping the disks is already paid for by the virtue that the magazine shipping has already been paid for. The negligable weight of a disk should NOT cost so much in postage. Put this way. The Uk subscriber gets a disk sub for 10 Pounds over a Magazine sub......the Overseas subscriber gets a disk sub for 17 Pounds over a Magazine sub for surface and 19 Pounds over for Air Mail.

There is NO WAY that is for Postage! A disk weighs almost nothing.

They mean using a ZIP drive with a Atari,not a PC.
Accessing a ZIP drive through a PC would be too slow.Imagine running
VTOCFIX on a MYDOS disk!
From the APE docs,APE is only slightly faster than UltraSpeed.
(on a US Doubled 1050)

APE will create disk images for you.But creating 256-byte sector disk
images will create a disk image two sectors shorter than what you specified.
(at least in APE 1.09)
You'll need PCXformer to use with VTOCFIX or DISKFIX.
(for MyDOS and AtariDOS,respectivly)
They read every sector of every file,and would take for ever over the APE
interface,since it runs the same speed as UltraSpeed on a USDoubled 1050.
(it runs 8% faster than UltraSpeed,actually)

: have been KE-Soft , AMC , Kaisersoft, nearly all of the Ram (a ABBUC group)

I would love to go to this show. However, I will have to limit my trips to
Europe to ONE this year! :-) I hope to attend the ABBUC JHV 97 in Herten this
Autumn.

It is interesting to note, that many German and Dutch Atari 8 bit enthusiasts
who have learned English use the term "Freak".....ie "I am an Atari freak".
Not that we don't understand what that means....but native English speakers
do not use that term. (I can only speak for Canadians)

"Freak" is used in a derogatory manner to denote abnormal
appearance. One is also said to "Freak out" ie become extremely agitated.
However, no one here is an "Atari Freak". We are "Atari Fans",
"Atari enthusiasts", but not "Atari Freaks".

Despite having a German name, I struggle with the German language. I am sure
I construct German phrases which sound odd. This is just an observation! :-)
It is not meant to criticize.

Only if you could hook up the ZIP drive to the ECI or some other parallel port of the Atari.....(and probably even then, the Atari couldn't keep up, unless it can handle sustained throughput of 600K/sec?).
The original poster was thinking about using the ZIP drive hooked up to the PC and using it with APE....which menas that hte limiting factor is the speed between the PC-Atari interface (serial), as opposed to the ZIP-PC interface, which is quite a bit faster than SIO.

I've tried using a PC floppy drive with APE Ultraspeed, it slows down when the floppy is accessed, but only becasue the BIOS has a preprogrammed .5-second or so delay to wait for the floppy motor to spin up, and when the head seeks to the next track, ther'es a delay for head settling time, etc. (i.e. the slowness isn't caused by the PC-to-floppy interface, which is a lot faster than the Atari-to-floppy interface) So it seems very jerky.....like there would be a burst of sectors transferred to the Atari, and then a half second delay as the PC's floppy drive spins up and finds the next track, and then another burst of sectors, and another delay, etc. But in the end, it still loads faster from the PC floppy (with Ultraspeed) through APE than my ATari does thorugh my Indus GT (without Synchomesh), but it seems slower especially if you're comparing it with a hard drive, but that's normal since a hard drive has no spinup time (since it's always spining), and access time is extremely quick so all you get is a quick burst of sectors through APE with almost no hesitation whatsoever.
I'm not sure of the ZIP drive technical specs, but it certainly won't be nearly as quick as a hard drive in terms of access times and throughput, as it is basically just a very high capacity, higher speed floppy drive.

>From the APE docs,APE is only slightly faster than UltraSpeed.
>(on a US Doubled 1050)

Er....Ape has a 3X SIO mode which is 50% faster than Ultraspeed.

Ahh, but the 800XL does have the PBI, which is the same animal in a different skin. Doesn't help with a card made for an 800 though like you say.

Cheers,

Jon
